Which ebook reader should you buy?

E-book readers have been around for a while. The first-generation e-book readers, introduced in the late 1990s, were little more than novelty gadgets. Early e-book readers such as Softbook and Rocket Book, were marred by poor-quality LCD screens and short battery life. The e-book titles available for these devices were also rather limited. However, with the release of the first Amazon Kindle device in 2007, the situation changed and the market for e-book readers expanded. Many devices are now available, including the Kindle, Barnes & Noble's Nook and the Sony Reader. Now people are buying and downloading digital books at a breakneck pace.

There are at least a dozen e-book readers currently on the market or due to be released and it can be difficult to know which one is right for your needs. Different e-book readers offer different advantages and disadvantages and vary depending on what make and model they are. While one may be the exact size you are looking for, it may weigh more than you wish to carry. Be careful to check out each e-book reader's specifications before buying and research thoroughly to ensure that you are buying the right product for your needs. So, if you are going to buy an ebook reader, let us learn the factor you should to consider about. And once you have bought an ebook reader, there is another problem here, for the most portable format for ebook is epub, if you want to read pdf files on ebook reader, you have to convert pdf to epub.

Display

One of the most important things to consider when purchasing an e-book reader is the display screen. The e-book readers currently on the market use either E Ink or an LCD. Reading on an LCD screen is exactly the same as reading on a computer screen. LCD screens can display in color. The downside is that LCD screens can lead to eyestrain and do not display well in natural light. E Ink does not display in color but is closer to the printed page in quality and make it easier to read e-books in natural light.

Content and Storage

The best e-book readers give readers access to thousands of

book titles and offer plenty of on-board memory for storage. One of the early advantages of the Amazon Kindle was that it had access to Amazon's online book store. This has changed somewhat with increased competition from other devices as well as Google Editions, Google's vast online e-book library.

Battery Life

Consider how long the battery lasts on an e-reader before it needs recharging. Consumers who spend a lot of time reading or plan to bring an e-reader along on vacations or long commutes, should buy a device that has long battery life.

Other Considerations

When buying an e-book reader, consider price vs. the features you value most. For example, the Nook Color has 8 GB of integrated storage, a microSD slot, the ability to access more than two million books and a full-color touch screen display. However, the Nook Color (\$249 as of April 2011) also costs nearly twice as much as the lowest-priced Kindle model with an E Ink display. A buyer looking for a e-book reader may not want to pay the additional money for a touch screen and a color LCD that makes it difficult to read books at the beach.

we just have talked about three factor you should to consider when buying an ebook reader, but as to which ebook reader you should to buy is all depends on yourself, for example, if you read the most at night with a booklight then a backlight LCD screen might be the best such as the Apple devices like the iPad or iTouch. If you like to read outside or mainly during the day, the best screens will be the eink screens like the Kindle, nook, Sony, or Kobo.

How to Jailbreak an iPod Touch in minutes

The iPod Touch a versatile member of the Apple iPod family. Each generation of iPod has brought about advances, and the iPod Touch is years beyond its predecessors. The touch function is the most obvious advance, allowing you to navigate the device with a simple movement of your fingers. but unfortunately Apple restricted a lot of it's potential by locking the firmware. The only way to unlock the full potential of your iPod and install custom applications, ringtones, etc, is to "jailbreak" the iPod, whereby you remove Apple's firmware restrictions. Previously this required opening up the actual iPod and voiding the warranty, but luckily with recent advances you can safely jailbreak your iPod with little to no computer experience, and your warranty will stay completely in tact! This is 100% safe, and there is no risk of damaging your iPod if you do it properly.

There are many jailbreak Ipod touch methods that you can use for your benefit. However, in order to ensure that you will get the most out of your hard-earned money and that your device will not be affected with some irreversible problems, it would be best if you take your pick carefully. Otherwise, you might encounter issues that might be more than you can handle.

Here are some methods that you might find useful:

Automatic Method - Jailbreaking Through A Computer Program

1. Download a jailbreaking software and the latest firmware for your Ipod. But before doing so, create a destination folder where you can save both files. After the downloads are completed, extract the jailbreaking software.
2. Afterwards, Select your Ipod from the list of devices that will appear. Hold the "Option" button and then click the "Restore" button. Afterwards, choose the firmware that you downloaded earlier. Wait as iTunes updates your device.
3. Launch the jailbreaking software. Wait as it prepares the jailbreak data.
4. A new window will appear, telling you to choose the jailbreak options that you prefer. Make sure to choose Cydia and other options that you think will be useful.
5. Plug your device into your PC. Turn it off and then click "Next". Put your Ipod into DFU mode by holding both the Home and Power buttons simultaneously for 10 seconds. Afterwards, release "Power" button while continuing to hold the "Home" button.

6.Wait as your device reboots and as the software automatically jailbreaks your device.

Manual Method - Jailbreaking Through A Computer Chip

1. Buy a computer chip from your favorite computer shop or from a reputable online shop. This chip will serve as a jumper that will allow your device to lift the download restrictions set by Apple.
2. Open your Ipad. However, you must be very careful. Only open your device using the proper tools. Otherwise, this might cause some unwanted damages and dents which you will not like at all.
3. Install the computer chip. This will require some technical skills on your part. Remember that placing the jumper on the wrong area will result to the jailbreak working improperly - or worse, it could cause your Ipad to become useless.
4. Reboot your Ipad. Through this, your device will detect the new chip that you installed.
5. Check if the jailbreak worked properly. You can do this by downloading apps and programs that are normally prohibited by Apple.

After jailbreak, you can play more games and many other funny things with your ipod touch, but there are some ipod tools you still need for your ipod touch, such as ipod 2 ipod coupon code and mac software coupon codes. If you have any other device and want to share your music and so on bought from itunes on your other device, then you may need the drm removal reviews to help you.

The Best PDF Reader Apps for the iPad

Now that Apple's iPad has become popular, many users will want to view PDF files on the go. With a brilliant screen, e-books and documents display beautifully on the iPad.

So, do you need a good PDF Reader App to view PDF's on your

iPad? If you do not know which pdf reader app is suitable for you, I will tell some good pdf readers for you here.

iBooks

Apple's native e-book reader is perhaps the worst choice for in-depth PDF reading. Although the app recently gained the ability to include PDFs alongside e-books, its features are still severely limited. The interface is the slowest among all the apps we tried, taking up to two seconds for a single page to be rendered (an instantaneous action on better readers), and you have no way to highlight, annotate or copy any of the text from the PDF. The search function works well, giving you access to Wikipedia and Google for a Net search if needed, but it kicks you out of the 'iBooks' app and into Safari instead of doing the search in-app. We'd only recommend 'iBooks' for the most casual of PDF readers.

E-book Readers

iPad e-book reading apps such as iBook, Stanza, Kindle and Nook can handle PDF documents as well as e-book formats. Features on the PDF reader are limited compared to the e-book format, but you can pinch zoom to resize the text for easier reading. Some apps also offer in-app brightness or contrast adjustment so you can set the background and text contrast at a level that is easy on the eyes.

PDF Readers

The iPad App Store is full of PDF readers with various features, including the ability to mark up PDFs or add signatures and fill in forms. Each reader's features are explained in the store's deion, so check out several options before you settle on a specific one. Look for one that allows color and contrast adjustment, one and two-page layout views, zoom and search features.

iAnnotate PDF'

iAnnotate PDF' is like the PhotoshopCS5 to the other apps' MS Paint. In fact, it may suffer from too many features, with a zillion helpful pop-ups for every page and tool. Thankfully, once you've worked your way through the app's myriad options, you can turn off the help windows, and customize the interface within an inch of its life. It sports dynamic highlighting, a pen tool, notes and bookmarks, all of which can be saved to the file so that they can be read in any PDF reader on any device.

Pdf format is popular in many areas, not only on ipad but also many other device, especially useful to engineer, they usually

need to convert their works to pdf files and then share them with their customers, but when their customers are not satisfied with their work, they have to edit it, the question is that pdf is not editable, how can the engineer do? One way is to convert pdf to dxf with the pdf to dxf freeware. Or they can also convert pdf to dwg and then edit them.

What iPad Apps Does A Student Need?

While the laptop remains the tech tool of choice for most college students, many are embracing portable and innovative tablets like the iPad. Since its release in 2010, the iPad has taken the tech market by storm and become a popular, educational and fun tool for both teachers and students alike. It is increasingly infiltrating college education, with some schools even offering free iPads for enrollees.

Whether you're a college student looking for new apps to stock your iPad or someone just curious what kind of appropriate resources are out there, start your search with these 48 great apps. Among them, students will find help with everything from keeping homework organized to finding the perfect first date spot - and just about everything in between.

1. Dictionary.com.

This made the list of top iPhone apps and is a must have for the iPad as well. Added functionality and an updated inventory of almost 1 million words makes this app a great companion in the college atmosphere. The entire dictionary, as well as the added thesaurus, is available offline. Additional features are available during Wi-Fi connectivity.

2. Netflix.

If you haven't figured that relaxation is extremely important

during college, you will soon. What better way to relax then to curl up with a good movie or TV show on a cold or rainy weekend, and just forget about all the things that you still need to do. The entire Netflix online library is available with this app and it streams right to the iPad. A Netflix membership is required. Keep an eye out for the Hulu app that's supposedly coming soon, as well.

3. Sundry Notes

Not only does Sundry Notes serve a valuable organizational purpose, it also costs nothing as well! With the ability to import .pdf files, format writings, make quick drawings, run searches of Wikipedia, Google, and Google Books, snag images off the internet, make recordings, and much more, educators need to download this application to help keep everything they need for class organized in one place. Math teachers will especially enjoy the ability to work on virtual graph paper.

4. Free Books

Any educators with a need for quick reference to 23,469 books (and counting!) should absolutely download this amazing resource. Completely free, not only does it provide access to classic novels, but autobiographies, letters, speeches, and other writings by significant historical figures and recognized geniuses - including the American presidents - works of philosophy by Seneca and other influential thinkers, Shakespeare's plays, and more as well!! Because of this, even teachers who do not focus on English still benefit greatly from what Free Books offers. But if you want to read some purchased books from iTunes, you have to remove DRM first with a DRM removal software.

5. Mobile Air Mouse

Turn the iPad into a viable wireless remote or trackpad using Mobile Air Mouse, which fortunately sports far more uses than these. Educators with a love of incorporating technology into the classroom will appreciate how it functions as an all-in-one tool with a number of excellent remote control, trackpad, keyboard, and foreign language functions - they can even place a computer into sleep mode and wake it back up! The application comes very much in handy for controlling the visual aids during lectures by reducing the amount of necessary equipment.

Besides those useful apps, you may also need some tools for iPad, such as DVD

Apple on Friday began redecorating San Francisco's Yerba Buena Center for the Arts with a massive, colorful banner featuring the company's logo ahead of next week's media event.

Workers began covering the glass windows on the center Friday morning in California. Apple typically hypes its product unveilings with decorations throughout the center.

As of Friday afternoon, workers were about halfway done with sticking the design to the center's windows. This year's graphic is a mix of vivid colors in the background, with a giant white Apple logo up front.

The bright colors and what appear to be paint splatters in the design are somewhat reminiscent of the theme for the media event Apple held in early 2010 to introduce the first iPad. As rumors of an Apple tablet were swirling, Apple invited members of the media to "come see our latest creation."

This year's invitation features a picture of an iPad with a fingertip touching the iOS Calendar application icon. The date on the calendar is Wednesday, March 7, which is when the media event will be held.

Apple has unveiled its previous two iPad models in events at the Yerba Buena Center. Last year's decoration was a black Apple logo on a white background, surrounded by colorful dots.

Invitations to last year's event featured the iOS calendar icon peeling back to reveal an iPad. It invited members of the press to "come see what 2011 will be the year of," and at the

event Apple declared it the "Year of iPad 2."

The fact that the 2012 invitation says that attendees need to "see" this year's update has been viewed by many as a reference to the high-resolution Retina Display that is expected to be one of the defining features of the next iPad. There has been mounting evidence leading up to this year's event that the so-called "iPad 3" will feature a 2,048-by-1,536-pixel display, doubling the resolution and quadrupling the number of pixels of previous iPad screens.

Are you looking forwards to the release of ipad 3? I am really want to own an ipad 3 if it is released. It is also a great thing if you have an ipad 2, with a

What will the Apple iPad 3 be called?

It is said that apple ipad 3 will be released in the early march, and it has been a long wait for techies and Apple fans alike, but after a cryptic press invite was sent out last week we've just been counting the minutes.

The press conference announcement did very little to stop the iPad 3 rumour mill from continuing its barrage of speculation.

There is a general consensus over certain aspects of Apple's latest device, after the more outrageous claims had been laid to rest.

Numerous reports have pointed to a 9.7-inch screen with a 2048 x 1536 retina display, a quad-core Apple A6 processor, and a slightly thicker body.

The tech world debate now concerns the next-gen iPad's name, with a number of different suggestions as to what it may be. So what will the iPad 3 actually be called? First, I would like to say that no matter what iPad 3 will be called, it is worth for you to own a new iPad, both the iPad 2 and iPad 3, and you then need the DVD to iPad converter for Mac discount and

iPad transfer coupon codes to help you play your iPad better.

Apple iPad 3 to be iPad 2S

This worrying rumour was sparked by a Chinese manufacturer that produces iPad cases. The company in question, called Chineestyle, is boldly already selling cases for the new iPad - with the name iPad 2S.

The company says it built the cases based on information given to it by an Apple supply chain vendor. It isn't completely unlikely that we'll see an iPad 2S tomorrow, but Apple might not want to anger fans in the same way as it did with the iPhone 4S.

And given that the iPad 3 is set to be a big upgrade to the iPad 2 - more so than the 4S was to the 4 - the 2S does not seem fitting.

Apple iPad 3 to be iPad HD

This is a far more likely scenario, with a number of tech blogs and manufacturers proclaiming the new iPad to be the iPad HD.

The HD stands for the higher-resolution Retina display, which would have double the linear resolution of the current iPad 2 screen.

Mashable, VentureBeat and CNet each reported that the new iPad will be named the iPad HD when Apple unveils the device Wednesday. Their story is also corroborated by an earlier discovery of alleged part listings from accessory makers Griffin and Belkin, as well as usage data from an application called Tapatalk.

By all accounts, calling the new tablet iPad HD makes sense. That's mainly because the most notable feature of the new Apple tablet is meant to be the higher-resolution display, which would have double the linear resolution of the iPad 2, from 1024 by 768 pixels to 2048 by 1536 pixels.

The iPad HD display's resolution would be higher than full 1080p HD video resolution at 1920 by 1080 pixels, and should display much sharper images. At 9.7 inches and double the current resolution, an iPad 3 display would have just over 260ppi pixel density. The only comparable Android tablet at this resolution is the Transformer Pad Infinity 700, with a 10.1-inch 1,920 by 1,200 pixels resolution screen.

Another significant feature that could make its way onto the iPad HD is 4G LTE connectivity and a quad-core chip dubbed the A6. The chip would have twice the power of the dual-core A5 found in the iPad 2 and iPhone 4S, making it powerful enough to drive the high-resolution display.

If you are an apple fan and have itunes on your computer, you then need to remove drm from itunes.

Which Tablets Should You Get?

After months of rumors and speculation, the new Apple iPad is finally here. While the tablet market is growing more and more crowded by the day, for some people, Apple is the only tablet manufacturer worth considering. With that in mind, which is the better buy: Apple's brand-new iPad, or the newly discounted iPad 2? Which one should you get? First, let us see the comparison n between the two tablets. Or you can check out here What's the change from ipad 2 to the new ipad to learn more difference between them.

Processor

The original iPad introduced the spoils of Apple's 2008 acquisition of semiconductor company P.A. Semi. The Apple A4 was an ARM Cortex-A8-based core clocked at 1GHz. The iPad 2 introduced the

A5, a dual-core chip based on the new ARM Cortex-A9 design. The A5 is clocked at 1 GHz. We don't yet know what the new iPad's A5X is clocked at, but it remains a dual-core chip.

Graphics

What the A5X does have is better graphics capability - with Apple saying the new processor has quad-core graphics. Like the iPhone 4, the iPad and iPad 2 both had an Imagination Technologies PowerVR SGX-based graphics chip and we expect the new iPad is the same.

Apple reckons the new graphics are "twice as fast" as Nvidia's Tegra 3, and offers four times the graphics performance of Nvidia's chip. We're not sure Nvidia will let Apple get away with that one - and we're not even sure it can be true - Tegra 3's performance is stunning and the Tegra 3 GPU has 12 GeForce graphics cores.

Memory

Like the original iPad and iPad 2, the new iPad comes loaded with 16GB, 32GB or 64GB of what is presumably still Toshiba-manufactured flash storage. iPad 2 packed 512MB of memory, but we don't yet have details on the new iPad, though we reckon it has to be 1GB.

Display

The screen is where the big change has happened. The iPad 2 inherited the 1024 x 768 LED-backlit display from the original iPad. The new iPad ups this significantly, with a 2048 x 1536 resolution display that has 264 pixels per inch - the pixels themselves are indistinguishable, just as on the iPhone 4 and 4S. Both are 9.7-inch displays and have a fingerprint-resistant oleophobic coating.

Communications

The new iPad ups the ante on the iPad 2 by introducing 4G LTE connectivity alongside the Wi-Fi capability.

As you'd expect, both have Assisted GPS and digital compass alongside the accelerometer found in all iOS devices and the three-axis gyroscope.

The new iPad also has separate US models for both the AT&T and Verizon networks, while there's also 21Mbps HSPA+, DC-HSDPA offering 42Mbps. LTE clocks in at 73Mbps. You can also use the new iPad as a Personal Hotspot via Wi-Fi, Bluetooth or USB. You also get Bluetooth 4.0 on the new iPad instead of Bluetooth 2.1.

Palm Foleo hits eBay

Are you jealous of the Palm Foleo somebody have?
Here's your chance to do something about it. There's another Palm
Foleo listed on Ebay right now.

This is a rather rare occurrence, and in the time
I've been tracking them I have seen Foleos on Ebay twice a year,
at most.

What's the Foleo, you ask? In terms of hardware, it
was a netbook. But in terms of market presence, it was Palm's
last big fiasco (before the TouchPad).

Back in 2007, Palm had a great idea for a netbook.
That was a largely unfilled niche at that point, and Palm thought
that the 10" Foleo would make killing. It

didn't.

Palm never released the Foleo, because as the ship date approached it became more and more obvious that it cost too much (the Asus eee701 cost half as much) and not very many people wanted to buy one. In some ways, the Foleo was like the TouchPad. It had a decent design with several clever features but died due to poor marketing, app support, and the fact it simply cost too much.

Speaking of apps, the Foleo died with such speed that not very many apps were made for it. Most of what I've found were the beta releases of office apps, and I've also found that some older Flash games will run on it. I couldn't find a reading app, but Ibis Reader, a browser based Epub app, worked okay.

The Foleo is (by today's standards) underpowered and it's running an out of date web browser. Its other major limitation was that its email client required a phone to sync with. While I'm sure that made sense to Palm, it also hobbled the Foleo.

It has a 10" screen, Wifi, USB port, SD card slot, and an internal CF card slot (in the battery compartment). The CPU is rated at 416MHz, and it feels slower than devices I've owned with comparable CPUs.

But the rest of the hardware design is surprisingly solid. I haven't touched it in a couple weeks and it still has a nearly full battery. For a device that is in sleep mode, not off, that is a remarkable achievement - especially considering the age of the device.

BTW, this isn't the first netbook, not by a longshot. But it was one of the first to be marketed under the name netbook (even though it never hit the market).

INFOGRAPHIC : 7 Reasons To Embrace Online Culture

Everyone and everything is now on the web, and if not, then they should be. More and more of our lives are becoming inter-connected with one another, whether we are doing our banking online, buying birthday presents for mum, or chatting to someone on the other side of the world. The Internet rules the Earth and it's here to stay. Which makes my mum nervous as she probably imagines a nuclear apocalypse every time my dad boots up his laptop.

Our infographic today gives you 7 reasons why you should embrace online culture, rather than push it away. 2 BILLION people are online (think about that figure for a moment) and if you are a business owner, it makes obvious business sense to leverage as much of that 2 billion as possible. So you should be

blogging, as well as using Facebook and Twitter, thereby putting a human face on an otherwise bland website. If you blog, tweet and Facebook, you can expect a lot of return custom as your passion will hopefully show through.

What do you think? Can you think of another reason to embrace online culture? What else should online businesses be doing to encourage return customers? View more interesting information from here:

Make a slideshow for on FaceBook

Have a bunch of photos and you don't know what to do with them? share them with your friends on Facebook? It is a great idea. Because Facebook is the most popular social networking website and allows you to easily share photos and pictures with your friends.

However, have you ever thought of turning these photos and pictures into a slideshow and upload the video to Facebook? it will be a great surprise to your friend, but

how to make a

slideshow on facebook? we are going to learn here together.

The first step in making a slideshow, is finding a software program, that is easy to use, and can add music to your slideshow. Well, most computers with windows, have a program called Windows Movie Maker! You can create great slideshows with this program, add music, and even narrate your own words to your slideshow. There are other programs available, but for now, we will concentrate on Windows Movie Maker 2.6, and for ease of writing, from here on will be known as WMM. If you want to make a slideshow on mac, here is a mac slideshow

software to help you.

Step 1: Open up WMM, Once you have done this, go to FILE,

click, and you will see a box that contains the words, IMPORT INTO COLLECTIONS! Click this, it will open a drop down box, and in there should show a list of places on your computer. Wherever you have placed your pics on your computer, click there, and next, click on the photos you want to import to use for your slideshow! I always hold control and click each pic I want to use. Once you have selected your pics, now click open, and they will appear in WMM. (Don't worry if you forgot one or two, you can always add more pics later)

Step 2: Open up Story board, you can use Timeline, place your pics, left click, and drag your pics to the story board, either way is as good as the other. Don't worry if they aren't placed just the way you wanted them, you can place them in any order you want, just click and drag into the position that suits you!

Tips: about your slideshow, and that is adding titles, and captions to your slideshow. Titles can be added easily, and you have several choices, as where to add them. First, you can add a title to your slideshow! You can click on a clip, then click the following choices, Before selected clip, On selected clip, After selected clip! You can also add credits to the end of your slideshow as well. To add titles, etc. to your slideshow, once again, we go to the TOOLS Tab, and from the drop down box, click, Titles and Credits! It is self explanatory from the choices!

Step 3: Now that your pics, are all loaded onto the story board, you may want to add some video effects! WMM comes loaded with some great effects, to find these effects go to the TOOLS tab, click it, and in the drop down box, click on Video Effects! There are a great many there to play around with! To add a video effect, left click on the effect you want, and drag it to the little box with the star in it, and place it there. This isn't a have to, add, but some of the effects, really add to your slideshow! So go through all your pics, or just some, it is entirely up to you!

Step 4: Adding transitions between your slides! Transitions are what happens between each slide, very similar to effects. Once again, click on the TOOLS tab, from the drop down box, click Video Transitions. There are a wide range of transitions. To add a Video transition, you left click the one you want, and drag it to the box with the arrow in it between your pics. It's just that easy.

If you want to add music to your slideshow, you can follow the following steps.

Step 5: You now want to add music to your slideshow. First, you have to upload the music you want to your computer. Throw a CD into your CD/DVD drive, pick the song, and save it to your Music Files on your hard drive. Now that you have the song you

want, once again, you go toIMPORT into Collections, find the song you have placed on your computer, click it, and add it to your Collections! Once you have it there, left click the song, and drag it to the beginning of the timeline. Actually, you can place it anywhere you want on the timeline, but for ease of explanation, we will put it at the beginning of your slideshow! That's it, we have now put together a slideshow. Before we save the slideshow to your computer, because that is what we want to do next, hit play, and give her a try!

Once again, go to your timeline, now, click on the end of the song, and drag it to where your pics stop! That's all there is to it. Now, try playing your slideshow again. Better? The song stops in a stupid place? Well you can LOOP it, that will solve that problem! You can even add more pics, etc., to make it fit the way you want.

Okay, so now you know how to make a slideshow for on Facebook, but you have to put it all together, to create the slideshow, as a file on your computer! Go to the File tab, click Save file, you will be prompted to give it a name, save it. Well, upload your file to YouTube! You will need an account for this, but it is free, doesn't take long to set up, and it's easy!

Once your account is created on Youtube, upload you slideshow, the powers that be, at Youtube, will process your video, once it has finished processing, they will send you an email, telling you it's already to go! They may mention the fact that you have music added that you don't own, but they will look after this little detail for you. Now you are ready to show your friends, the slideshow you made. You simply hit the Share button on Youtube, and there will be icons there, one of which is a FaceBook icon, hit that, and PRESTO< there is your slideshow on FaceBook, for all your friends and family to see!

Sounds exciting? Yes, so, just follow the steps. If you want to make more slideshow for other use, the free slideshow maker here can help you.

Great Tips to Maximize iPad Battery Life

So you've got your new iPad and are loving it's gorgeous Retina Display, right? Well, apart from its ultra-high resolution display, the new iPad also packs a pretty amazing battery. While it takes a little longer to charge than the previous models, it does last longer than the older models too. However, in order to push your device's average 10-hour battery life to the maximum, we suggest you make these following little adjustments, courtesy of OSX Daily.

1. Lower the Screen Brightness - We discussed this in a recent iPad tips post, but other than being easier on the eyes this will make the single biggest difference in battery life. With how bright the iPad 2 and Pad 3 displays are, you can usually get away with 60% brightness at all times. At night, going down to 30% or 40% brightness or less is easier on the eyes and will conserve even more battery. Access the setting by double-tapping the home button and swiping to the left.

2. Use Airplane Mode - When doing something that doesn't require internet access, turning on AirPlane Mode can save some battery life. Perfect for reading books or doing things on the iPad, and it has the added bonus of preventing internet distractions. Find this in Settings > Airplane Mode

3. Disable Bluetooth - If you aren't using Bluetooth for an external wireless keyboard or otherwise, keep it disabled

4. Shut off your Wifi and iCloud when not in use

5. Download and watch movies from the iPad itself rather than streaming with YouTube or Netflix, if you want to watch dvd movies on your ipad, you have to convert dvd to ipad supported formats with the help of some tools, such as the dvd to ipad converter discount, if you are using a mac, then you need the dvd to ipad converter for mac discount software. It is too troublesome.

6. Turn Off Notifications - Is it crucial to get a notification every time it's your turn in Draw Something? Probably not. Disable Notifications for apps you don't absolutely have to have notifications posted for and you can recoup some battery life. Find this in Settings > Notifications, and disable them.

7. Disable Location Services - Most important for 3G/4G iPads, but you will save battery life even if you just have a Wi-Fi model. Turn these off in Settings > Location Services

8. Disable Diagnostic & Usage Reports - Sending out usage and diagnostic reports helps Apple to make a better iOS experience, but it also causes some minor activity in the background. Disable it for maximum battery conservation. Find this in Settings > General > About > Diagnostic & Usage > Don't Send

As an apple fan, or if you have any apple device, you may also have other device, if you want to watch your movies downloaded from itunes on your other device, you then have to remove drm from itunes.

Changing Account Passwords and Login Name in Mac OS X

Have you ever wanted to change the short username in Mac OS X?

Dig around in the System Preferences and you'll soon find it's not as easy as just typing in a new name. Apple has some directions on how to do it, but the instructional document is painful just to look at, let alone implement. Fortunately, there's an easier way here you can follow.

Open System Preferences and click on "Users & Groups"

Select the users name you wish to change from the left side

Look for "Full Name" on the right side options and click in the box, enter the administrator password to authenticate the name change

Type the new name as you want it to appear at the login screen

Exit out of System Preferences

Confirm the login name change took place by logging out or by locking the screen, both of which will bring you to the standard OS X login window. This is the same for OS X 10.7 Lion and OS X 10.8 Mountain Lion.

The full name/login name is not to be confused with the short user name of an account, which controls the directory name and SSH logins.

One of the most important and crucial parts of an account is

its password because this ensures security. Even though your system is hardly noticeable, it is still included in the enormous public network when connected to the internet. Shutting down your system when it is not in use is inadequate protection, so it is necessary to create secure passwords.

Your passwords protect all your files in your account, as mentioned earlier as well as your computer and system files. But sometimes you may feel the need to change your password for some reasons such as the knowledge of somebody else, its susceptibility to be traced up, or your failure to remember it. How then can passwords be changed, specifically when you are using a Mac OS X? Here are the few simple steps to follow to change your os x password:

Log in with an administrator account. From the Apple Menu, choose System Preferences.

From the View Menu, choose Accounts.

If the preferences pane is locked, click the lock button and enter an administrator name and password.

Select the username whose password you want to change.

Click the Reset Password button (Mac OS X v10.3 and v10.4) or the Change Password button (Mac OS X v10.5 or later).

Click in the Old Password box and type your old password.

Click in the New Password box and type your new password.

Type your new password again in the Verify box.

Add a hint if desired; type it to help you remember your password. You'll see that hint the next time you forget your password upon logging in.

Click Change Password.

Tips: Passwords for administrator accounts must not be blank.

So, if you have a mac, then you will meet lots of question when using it, then you need the

mac software

coupon codes here to help you solve them. If you also have an iphone, then the

dvd

to iphone converters for mac coupon code will be another tool you must own.

4 Best Free WiFi Apps For Your Mac

Anyone who owns a Mac is probably familiar with the ease with which AirPort operates. It seems to do a good job of automatically finding and connecting to the best available network in a given area, and switching between networks is simple.

However, AirPort doesn't give you a lot of extra information about the networks located near your Mac. The signal strength is represented by a simple icon, and information like signal-noise ratio, security and connection type isn't available at a glance.

If you're looking for this information - and more - you'll want to consider a free Mac wifi scanner. Today, let us learn some best free WiFi apps for Mac, if you are interested in this article, you must be want to click in:

.

Kismac

This is an open source WiFi sniffer for Mac. And users rate it above the apps like iStumbler, MacStumbler etc because it offers an added advantage of monitoring and passive scanning. Download it, install it and explore it as this Mac WiFi scanner has so much to offer.

WiFi Scanner

This creatively named software does exactly what it advertises. When opened, it automatically scans nearby airwaves for WiFi signals. You'll find that WiFi Scanner provides a lot more information than normally available through your Apple computer. The categories of information that you'll be provided with include channel, MAC address, wireless standard, received signal strength, noise, signal-noise ratio, and the encryption

method being used to provide security. WiFi Scanner will also let you know if a detected network is an ad-hoc (IBSS) network. For the most part, WiFi Scanner is used simply to find networks and provide information about their signal strength, security and connectivity. However, you can use the program to easily create a ad-hoc network by clicking the Create IBSS button. You'll then be prompted to enter a name and password. You can, as you might have guessed, join any network listed by using the Join button. WiFi Scanner can utilize saved password information from your Mac Keychain - provided you feel comfortable giving the software permission. As an mac user, you need to remove drm with a
drm removal
software sometimes.

AP Grapher

AP Grapher is a freeware program for Mac OS X which searches for and displays nearby wireless (AirPort/WiFi) access points along with information about their percent availability, maximum signal strength, and last contact time. The grapher window allows you to graph multiple signal strength parameters for the base station you are currently connected to and optionally display them in the dock icon.

WiFi Diagnostic App

Well, you will get to use this app only if you are working on Lion. This app would not scan for any available WiFi connections, but it would let you dig in the details of the connected WiFi connection. It lets you perform tasks like monitoring the connection, recording events, checking performance and stuff like that. Its a useful to have.

To play well with your computers, for instance, if you want to download some drivers for your computer but do not know how to, you then can use the

Tips and tricks on how to make a quiz in Dreamweaver

Nowadays, there are many ways to make

online quiz, for example, you can create online test with Google Docs, you can also create online test with desktop Flash quiz maker and so on,

today, we are going to learn how to make a quiz in Dreamweaver.

Adobe Dreamweaver is a user-friendly website design program originally owned by Macromedia. It is highly versatile and supports Java scripting, cascading scripting sheets and many other common script languages. Dreamweaver doesn't require knowledge of HTML. As

a result, construction of fairly complex web pages is possible for almost any level of experience. Forms can be created in a series of point and click steps. The following steps will guide you through the process.

Step 1: Creating a Form.

Create a new Web page or open up an existing page in Macromedia Dreamweaver. Format the page to how you want it (page width, page title, colors, fonts, etc.). Next, go to the Insert menu and select Form.

Step 2: Inserting a radio button.

Title your quiz by typing in some text, and ask your first question. Hold the Shift key and press the Enter key (or Shift+Return) to go to the next line. Go to the Insert menu, select Form Objects, then Radio Button. A radio button will appear. Type in your first answer option to the right of the radio button.

Step 3: Naming the Radio button.

Click on the radio button and go to the Properties Box, shown below.

In the first box, type in Question1 (use this name for each answer in Question 1...it doesn't matter what name you choose as long as you use it consistently). For Checked Value, enter the answer corresponding to the button. Make sure the Initial State is Unchecked.

Step 4: Formatting the radio button in HTML.

Tap the button in the middle to get to the view of WYSIWYG + HTML. (To return to the normal WYSIWYG view, click on the button on the right.) Click on the radio button, and the corresponding HTML code will be highlighted in black, as shown below.

Before the last > in the highlighted HTML, type in onclick="alert(' ')". The section you edited should look like this:

Inside the single quote marks, type in the feedback for the first answer. For the sample quiz, it would be the words Sorry, try again. You may want to use Correct and Incorrect, or give other feedback. Make sure your feedback does not include commonly used HTML characters like quotation marks or apostrophes. The line should now read something like this:

Repeat Steps 2 - 4 for each answer you want to include. Name the radio buttons for each answer in Question 1 "Question1" but

change the Checked Value name and feedback accordingly. For Question 2, name each radio button "Question2" and so on..

In my opinion, the easiest way to make a online quiz is using some free online quiz makers for help, with them, i just need to with a few clicks and a quiz will be made.

Step4. Tap the name of an audiobook or a podcast to start playing it.

What should you consider when choosing the best earrings

Earrings are very popular with women because it can help you enhance your overall look. It does so by adding femininity to your face. But earrings come in all different styles and shapes. It's not one size fits all here. You should carefully choose earrings that fit your face shape because only some earrings flatter you not all. In this article, we are telling you about what should you consider when choosing the best earrings.

Consider the shape of your face

Earrings must be worn according to the shape of your face. If your face is long, then choose hoop earrings to even-out your face. Make a choice from contemporary sapphire, ruby, or emerald hoop earrings with or without diamonds. If your face is round, drop earrings and long dangles work the best to help to elongate the face and draw the eye downwards towards the chin. Any earrings that help to elongate the face are gorgeous on a round faced person. If you have oval faces, your face is well balanced and any kind of earring will flatter you. A pair of pearl earring will make you

stand out.

Choose earrings according to your hairstyle and necklace. While facial shape plays a big part in choosing the right earring style, the length of your hair and your neck play as important a role. If you have short hair, the right earrings can really set off your face and your hairstyle, be sure to follow the guidelines for your facial type and don't wear earrings that are too long if you have a short neck. Mid-length to long hairstyles can accommodate small loops, posts or wire earrings that aren't too long. Be sure that your hairstyle isn't competing with your earrings by getting tangled up with your hair.

Beautiful Earring Types

generally speaking, those kinds of earrings like wood earrings, animal print earrings, large and boldly studded earrings and wood and resin printed earrings are popular now, they look beautiful on [jianmeilai](#) displays as well as people wear it. The most important factor to take into consideration is the shape of the earrings.

Be Kind to Your Ears

You may want to try some of the latest styles on the fashion scene, but it's also important to take care of your ears and make sure that you aren't wearing earrings that are too heavy and that weigh down your earlobes. Even if you have pierced ears, try clip earrings as an alternative. Clip on earrings gently hug your earlobes, securing the earring with a soft padded clip. Clip earrings can also be a great alternative if you don't want to take the plunge and go for pierced.

Earrings play an important role in projecting the right appearance. The right pair of earrings brings attention to your face while neutralizing attention from less desirable elements of your appearance. Consider the way you wish to look and make the right choice with your earrings. So the next time when you select your earrings make heads turn with your style and confidence. After buying the perfect earrings, you may need something to display your earrings, here I suggest the [jianmeilai](#) acrylic jewelry organizer, you can click in and look for more details.

4 useful tips for storing wines

If you are a wine collector or you are just a wine lover, then you must have stored many kinds of wines, there is not everyone know how to store wines, so, we are talking about tips for storing wines in this article.

Keeping the temperature cool and humid

Although wine is very acceptable at bottling time, it will continue to improve if allowed to further mature in a cool, dark place. The ideal storage temperature for wine is between 7 C and 13 C (45 F - 55F). Minimal exposure to light and movement or agitation will also assist in the aging process.

Keeping them in the dark

Many of the wine bottles have UV filters incorporated into them. However, these do not guarantee 100% UV protection. Prolonged exposure to the sun will cause them to age prematurely, altering the taste of the wine significantly. White wines are the most sensitive to heat and light. If exposure to sunlight is unavoidable, try to cover the wine bottle up with something such as a piece of cloth to minimise exposure. So, try to use the acrylic wine display racks to display wines.

Do not make them excess oxidation

Wines need to be stored either on their side or cork side down to keep the cork from drying out and allowing air to enter through the cork. This can cause excess oxidation. If you can't use proper wine racking or bins, we recommend using old wine case boxes for storage.

Do not vibrate them

Another potential disaster is storage in an area with heavy foot traffic, near household appliances or anything that can create vibrations. Wine is delicate and its components can break down over time if exposed to heavy vibration. This is why an old refrigerator does not make a good wine cellar. First, the highest setting is probably too cold for red wines, and secondly, refrigerators are

not dampened against vibration from the cooling unit.

You don't need to spend a lot of money to store your wine. Remember, as cool as possible, but more importantly as consistent in temperature as possible; keep the wine away from light sources, and stay away from anything that can jostle the wine such as the washing machine. Finally, choose a good wine display racks from www.jianmeilai.com.
