How to convert videos to ipad?

Ok, do you have a bunch of videos that you fancy very much, and you really want to watch them all the time no matter where you are, on the metro or the bus, but the truth is you can't take your PC all the way, and your apple products like ipad don't support the format of those videos. So how do you fix that? Now there is no need to be bothered, ipad video converter suite can satisfy you.

Cucusoft

ipad video converter Suite is an all-in-one iPad video conversion solution which can easily convert both DVDs and video file to iPad friendly formats. It includes two software packages, the iPad Video Converter and DVD to iPad Converter. You will be able to enjoy your favorite DVD movies and video clips on your iPad wherever you go.

Tip: Designed for Windows 7, Vista, XP, NT, 2000 and all Windows user

Two Software Includes:

1.The

dvd to ipad ripper is the fastest iPad Converter program. It can convert almost any kind of DVD to iPad movie or iPad video format, you can use your iPad as a portable DVD player and enjoy your favorite DVDs on your iPad with it.

2. The

video to ipad converter is the easiest-to-use iPad Video Converter solution. It can convert almost all video format, e.g. DivX, XviD, MOV, rm, rmvb,dvr-ms, MPEG, WMV, AVI to iPad Movie/iPad Video format. You can enjoy your favorite movie on your iPad as a MPEG-4 Player with this iPad Video Converter.

iPad Video Converter Suite Features:

1.Three Running Modes

- Direct Mode, very easy for ripping DVD movies.
- Batch Mode, , very easy for batch ripping music DVDs, MTV DVDs and episodic DVDs.
- 1-Click Mode, a "designed-for-dummies" mode.

Note: In Direct mode and in Batch mode, you can select the subtitle and audio track language.

2.Input Types

With this iPad Video Converter Suite, you can convert almost any kind of DVD format, as well as almost any type of video file format, including DVD, vob, DivX, XviD, MOV, rm, rmvb, MPEG, WMV, AVI, dvr-ms, MP4, TiVo, .mkv, etc., to iPad video format.

3.Output Splitting

You can split your output video by DVD chapters and titles by using this iPad Video Converter Suite.

4.File Size and Quality Adjustment

You can customize the output file size and corresponding video quality.

5.Flexible Output Profiles

With this iPad Video Converter Suite, You can easily customize the various video settings such as brightness, bit rate, etc.

6.Video Crop

You can crop your video to 16:9, 4:3, full screen, etc.

7.Video Resize

You can resize your video. For example, you can set it to "Keep aspect ratio" or "Stretch to fit screen."

8.Converts to the latest iPhone, 4th generation iPad nano, nano chromatic, 2nd generation iPad touch, and Apple TV.

iPad Video Converter Suite System Requirement:

1.Software

Windows 2000, Windows NT, Windows XP, Windows Vista, Windows 2003 Server, Windows 7, etc.

DirectX 8.0 or later.

2.Hardware

MMX-enhanced CPU or more powerful; 32 MB RAM or more; Any VGA card

So, how about that? It's functional and powerful, and easy to

operate, with this, you can enjoy your favorite youtube videos or movies anytime.

Ipad2:LED-Backlit Display

So what do you like?

Twilight or transformers or glee toy

story or brokeback mountain ,anyway, when we are watching them, what do we expect? Good story? Of course, and excellent visual effect, ipad2 use led backlighting to make us enjoy videos with more pleasure. Also, with its IPS, it's very convenient to share it with someone else, after all, it has more fun to watch films with others, especially when you can't control your fancy to Robert Pattison, you can shake your mate and shout "what am I gonna do, he is so cute".

LED backlighting makes everything you see remarkably crisp, vivid, and bright. Even in places with low light, like an airplane. And there's no wrong way to hold iPad. It's designed to show off everything in portrait and landscape, so with every turn (even upside down), the display adjusts to fit. Because it uses a display technology called IPS (in-plane switching), it has a wide, 178° viewing angle. Hold it up to someone across the room, or share it with someone sitting next to you, and everyone gets a brilliant view.

But there is one disadvantage, ipad just can support H.264 video or MPEG-4 video and Motion JPEG (M-JPEG) format, maybe some movie and episode that you like are MP4, but unfortunately, most are not, and we all know if we want to watch videos on ipad, we have to pay, so why don't we download them on our PC and use

ipad video converter,
converting the format then put them on our ipad? i mean that's
saving lots of money for us.
Cucusoft iPad Video Converter Suite is an all-in-one iPad
video conversion solution which can easily convert both DVDs and
video file to iPad friendly formats. It includes two software
packages, the iPad Video Converter and DVD to iPad Converter. You
will be able to enjoy your favorite DVD movies and video clips on
your iPad wherever you go.

What is young people' stuff,
facebook&twitter and what, alternative
metal&apple productions, they have been a part
of our life, what do we gonna do without them?(just kidding) I'm
just saying ipad provide us such fabulous function, so we just
need to use it adequately, right? Anyway if you want to enjoy our

Little Trick of iPad2

As crazy apple production fans, when apple inc. release new
gadgets, people just can't stop themselves replacing old
generation for the new one, like most of us holding
ipad2 instead of original ipad. That's our
natural reaction, cos basically we think new things must have

more functions and easier to operate, that thought gets some point, but the truth maybe, I'm not gonna say "shock" you, at least will let us think they are playing some kind of tricks with us, if you know weakness of ipad2, you will definitely guess they'll be holding out for version 3.

So there is no need to acclaim how wonderful ipad2 is. Apple could have gone further, which is why many with first-generation devices will be happy to hold out. As Steve Jobs alluded to during yesterday's event, the company didn't really have to add much. That said, there are five specific things Apple could have added but didn't.

1. Retina Display. It's a high-density pixel display that packs in about four times the number of pixels as standard displays. but alas the screen that ships in the iPad 2 is the same resolution as the first. It has been proven the effect of having a resolution that high in such a small area can have a dramatic effect on detail for things like text, and detailed imagery.

2. An SD card slot/USB port. Rumors began circulating as early as September of last year that Apple was working to bring a mini-usb port to the next iPad. Extra fuel was added to that fire with a number of third-party case manufacturers making early iPad2 case designs with an extra hole near the top. This later turned out to be the revised placement of Apple's microphone, which had previously been located next to the headphone jack. So could Apple add either one of these to the next model? Perhaps though that would give people less of a reason to shell out \$29 for the connector kit.

3. Thunderbolt connectivity. Thunderbolt could end up being the answer to bringing that speed back, though with new MacBook Pros only sporting one Thunderbolt port, which is also used to plug into external displays, it's not quite at the point of being the kind of casual plug users will have open and available at all times. That could certainly change a little farther down the line though.

4. Near Field Communications technology. Rumors of Apple testing NFC chips in iPhones began as early as August, then a report by Bloomberg back in January claimed that Apple was working to bring the technology to the next generation of the iPhone and iPad. NFC chips could then be used as a payment

option, or with applications to ferry over their data from one device to another.

5. 4G. By comparison, Apple competitor Motorola plans to offer a 4G modem upgrade to owners of its Xoom tablet in the second quarter of this year. This will require that users send back their tablet to the company to get it retrofitted to receive the 4G signal.

Although, now that some of us already in that circle, what we need do is use them adequately, so if you like to watch videos on your ipad or ipad2, you may need a
ipad video
converter, it can convert all kinds of
formats to ipad. And you may interested in

iPad: Two Great ways to stay connected

How can you make your
ipad
stay on line? You maybe know how to surf
internet with your ipad, but it has some limits, perhaps most of
us use built-in Wi-Fi, what problem do you get? Do you notice
that you can't connect the internet at some place? Or when you
are out of Wi-Fi hotspots? Or it just freeze when you watch
videos or whatever else? When that happens, how do you feel? What
do you want to do? I gotta say, it sucks, but apple inc. always
can figure it out. Of course, Wi-Fi is powerful, but sometimes
you need another way to stay
connected.

All iPad models come with built-in Wi-Fi. If you want to

access the Internet in more places, choose iPad with Wi-Fi + 3G and sign up for 3G data service from AT&T or Verizon - right on your iPad. Wi-Fi or Wi-Fi + 3G.

Which iPad should you choose?

iPad with Wi-Fi is ideal if you have a wireless high-speed Internet router in your home, or if you'll be using your iPad near a wireless hotspot - in a coffee shop or school library, for example.

iPad with Wi-Fi + 3G includes Wi-Fi connectivity as well as 3G connectivity. 3G uses cellular signals - the same signals your cell phone uses - to connect to the Internet. Choose an iPad with Wi-Fi + 3G if you'll be spending time in places without Wi-Fi hotspots, such as outdoors or on your morning commute.

Tip: chose your ipad by carrier.

If you decide on an iPad with Wi-Fi + 3G, be sure to select the model that corresponds with the carrier you'd like to use for 3G service. The iPad model you purchase is specially configured to work with either AT&T or Verizon - not both. So while you don't have to activate 3G service right away, you should choose your iPad with Wi-Fi + 3G according to the carrier you prefer.

When you decide to activate 3G data service, you can choose the amount of data per month you want to buy - with no long-term contract. So if you have a business trip or vacation approaching, just sign up for the month you'll be traveling and cancel when you get back.

What you gonna do:

1. Sign up.

Tap Settings and choose Cellular Data. Then select a plan and enter your payment information.

2. Check your usage.

iPad lets you know when you're about to reach your data limit so you can add more.

3. Adjust your plan

If you want more data, you can sign up for a different plan - or cancel 3G data service altogether - anytime, right from your iPad.

ipad,ways,online,converter

Which Ipad do you decide to chose, depends on your own condition.

And maybe sometimes you don't want to stay connected, and there is no need to do that, but you still want to watch videos or ibooks with your ipad when you are boring, then you may need

an

ipad video

converter, and what do you know about these

operations of ipad:

how

to manage application icons on ipad? how to

sync

itouch videos to ipad? And how to

play

flash video on ipad?

Big Hello to Facetime for iPad

Facetime - once again,

ipad gets the world talking. As long as you and your family or friends or boyfriend or whoever get ipad2, you can see each other at any times. The video call can keep smooth all the way, you don't have to worry about that it will freeze at half way, and you or the one who at other side just freeze there with a

big face or a hilarious expression.

For faraway friends and family, long-distance relationships, or just for fun, FaceTime for iPad is here. With a tap, you can make video calls from your iPad 2 to someone else's iPad 2, iPhone 4, new iPod touch, or Mac over Wi-Fi. And be there in person, even when you're not.

The biggest way to say

hello.

So long "Long time no see." Because whether you're across the

house, across town, across the country, or in a different country altogether, iPad is the next best place to see your favorite face - talking, smiling, and laughing back at you. With a tap, you'll find yourself in the middle of anything you don't want to miss. Big things like birthdays, anniversaries, first steps, or holiday dinners. Smaller things like breakfast, homework, dog tricks, or bedtime stories. Just when you start missing someone (or something), drop in, catch up, and hang out as long as you want. Or just show up to say (and see) goodnight.

Tap, talk, smile, and wave.

Let's say you want to start a video call with your best friend. Just find her name in your Favorites list and tap the FaceTime button. An invitation pops up on her iPad, iPhone, iPod touch, or Mac asking if she wants to join you. When she accepts, the FaceTime call begins. Up pops her face - right in front of yours and nearly life-size - on the big iPad display. All you need is an Apple ID and an email address and you're good to go. It's even easier than picking up the phone.

Two cameras. One for them. One for you.

iPad has two built-in cameras, one on the front above the display and one on the back. You can switch between them anytime during a call. The front camera faces you, for saying hello. The back camera faces what's in front of you, for showing off where you are, who you're with, or what you just splurged on at the mall. And if something funny happens on your end, your friend can see it, too.

When you want to see someone who be far away from you or want to show your friend two cute tortoises just you just buy, pick up your ipad, and all done. I have to say nothing is impossible in this world now, with high technology, we can do anything that we wanna do. I mean, who can imagine that we can talk to the whole world just with a little gadget, but look around, we are all "apple" or maybe "Huawei".

And more functions you maybe wanna know about ipad:

What Do You Think About iPad3?

What do you concern now? iPad2? Ok, that is a little outdated. iPad3 is coming-that's what we are talking about. Maybe you don't know yet, but the rumors about apple inc. will release ipad3 this year has already been spread all over the world (you can say that is a little exaggerated). Anyway, on one knows where does the rumor come from, at least apple inc. haven't release an official announcement, just an unknown mysterious apple employee who isn't identified says that "ipad2 was a bit of a rush job and the third generation ipad is the one to make a song and dance about." iPad 2 was only listed three and a half month, analysts have already began to conjecture and speculate on iPad3. The release date is in the fall and it will be used the high-resolution Retina Display as iPhone 4 - all kinds of rumors, and classified. At this early stage, the vast majority of rumors just guessing, but more is bright hopes for the iPad.

So what's the word on the street about iPad3?

1. iPad 3 will be released this fall simultaneously with the iPhone 5.

It is hard to believe! According to the latest reports from DigiTimes, Taiwan suppliers are preparing the material for iPhone 5 and iPad 3. It is almost sure that iPhone 5 will be released in September this year, but iPad will have updated version just after Ipad 2 only launching six months? This is something have no persuasion.

2. iPad 3 will launch this Christmas?

Some analysts speculate Apple will release iPad3 this Christmas. The point we want to emphasize again is Apple won't release the new version before 2012. The most likely time is

spring in 2012. Apple will stick to the practice of releasing new production at spring, we are quite confident on this point. So let's look forward to the circular in March or April.

3. iPad3 will use A6-the faster processor.

iPad3 will use more advanced and faster processor, this speculation makes some sense. Currently iPad2 is using A5 dual-core processor, but Android tablet which use quad-core processors is in preparation stage. Apple's next-generation A6 processor will catch up with Android or ever better? About that, the possibility is much bigger.

4. iPad 3 will support 4G?

Mobile devices of Apple that is 4G is very slow, most likely because the battery life matters. But the battery life of iPad is still incredible long, so the third generation version has the opportunity to support 4G, for now is Verizon and AT & T's LTE network. (To iPad3 has been released, Verizon and AT & T's LTE network should have been completed and put into market.)

5. 7-inch?

Jobs said that he did not believe the 7-inch Tablet PC will be successful. But there are so many 7-inch computers Android have made a good example, some analysts seem like they don't agree with Steve Jobs. I guess this rumor will never become a reality, due to the momentum of iPad, 7-inch Android PC virtually has no threat to them.

So we can see the hottest topical is when the earth is iPad3 launching, but according to the truth that iPad2 is still selling hot, also new contracts and manufactures are still increasing, I bet we can't see iPad3 in a short time.

Ok, we talk about iPad3 enough, let's see what else about iPad2 you should master. If you are a movie fan and you watch videos at your iPad a lot, then you should know dvd to iPad converter, so that you can enjoy your favorite movies all the time, and if you are Mac users, Mac video to iPad is for you.

Diary of a Wimpy kid

Have you watched the comedy-ãDiary of a Wimpy

Kidã? I bet most

movie fans will say "it's historical", not that exaggerate, but it makes sense, after all ,that movie has been released for a long time, not mention , and as you know it's a series that based on the novel written by Jeff Kinney. I think the third an fourth one will be released soon, and I have more passion to look forward it than . I just think these kids in the movie are just so funny, and I can't wait sharing it with you guys.

It's an alternative dairy including comicãscrawl and textual description. Gray is a junior high school boy. He is kind, honest, intelligent, playful and full of tricks. His mother lets him keep a diary, apart from a lot interesting or memorable things, he also draws many cartoons. In the diary, Gray describes how to manage his high school life which is full of adventure, and how to escape the school singing competitions, and the most important thing is how to prevent any person knowing his secret.

He and his best friend Ronnie are kind of geeks in their school, generally they are the one who be paid attention more than others (but not the good side), cos others always have problem with them, especially those soccer players (why they always be the bad guy in the movie, it freaks me out, you know, laugh at other students that weaker than them, or even play tricks on them). More than that, school is not the only thing that Gary has to deal with, also his big brother just won't let him go, once he get the chance to tease Gary, he'll take advantage of it exhaustively. And his little brother, Gary is the one who have to look after him when their parents are busy, if something happens to that little rascal, it's definitely Gary' fault, even it's not.

And there more hilarious details about that movie, after you watching it, you'll know. Just a few days ago, I watched it on my ipad (not buy it , just convert it to MP4 with ipad converter suite) when I was in a bus, and I can't help laughing loudly, you can imagine how embarrassing I was.

If you want to watch your favorite movies on your ipad, you may want to know:

H.264 video up to 720p, 30 frames per second;

MPEG-4 video, up to 2.5 Mbps, 640 by 480 pixels, 30 frames per second;

Motion JPEG (M-JPEG) up to 35 Mbps, 1280 by 720 pixels, 30 frames per second.

These format means what video ipad can support, we can see that most format can't be supported by ipad/ipod, so if we want to watch some video is DivX, XviD, MOV, rm, rmvb, MPEG, WMV, AVI etc, we need a converter. For mac users, ipad converter for mac is suitable.

The Eagle of the Ninth

Maybe I think too much, a lot of movies that have been released recently express a same feeling, no actress, even has, but not important as men, just two men or more, like friends, but more than friends, like <The Eagle of the Ninth>~<Sherlock Holmes: A Game of Shadows> and <Blitz> yada yada yada. It's very amphibolous between two actors, especially <The Eagle of the Ninth>, you can see the novel or watch the movie, then you'll know what I'm saying.

The story takes place in AD 140 in Britain ruled by the Roman Empire, which is exactly Scotland where is McDonald's (director) hometown. Film was adapted from Turk Reef's historical novel by Jerry Locke ("Brideshead Revisited"), and 29-year-old actor Channing Tatum ("special forces") is the protagonist who is a Roman general named Marcus Aquila leading hundreds of people. Due to the Celtic's attack, Marcus was seriously injured and lost his army and status. Marcus decided to atone desperately, headed up to the north of Scotland, where is deserted to find the lost Ninth Legion Eagle. Fifteen years ago, the Ninth Legion which was led by his father (Donald Sutherland) somehow missed.

The novel was written by Turk Reef and published in 1954. The novel was sold millions of copies in the decades around the world, and was adapted into a 6 sets mini-TV series by BBC in 1977. The film remake right of the novel was sold in 1998, but has begun to formally enter the remake stage recently. The story background is existed in the real history, that is the ninth legion's mysterious missing of the Roman Empire in AD 120. The film's main character is named Marcus Aquila. Aquila means "Eagle" in Latin, which is the film's English title "The Eagle".

During this period, Marcus accidentally rescued a slave named Escobar in the arena, and kept him as a servant. Marcus heard someone at a tribe in the north had seen the eagle that his father lost, he was very excited and determined to find the eagle and got it back, aimed to restore honor of his family in the empire. And Escobar happened to born in Britain and was familiar with local environment, so Marcus decided to take him. Along the way, the relationship between Marx and Escobar was changed from the master and servant into a friendship, which has been through the text of betrayal and loyalty, especially in the face of tribal leaders, at that time, they just have each other and count on each other. Escobar was pushed by his opponent to the sidelines in arena, Marcus was sitting there there and staring at him, directly and

intimately, as if they were the only one in the entire arena, and then ignoring the atmosphere in the arena, Marcus put up his finger and saved Escobar, that their first met. And as I said, they became best friends and more closed.

Produced very well, but the story is humdrum, just to retrieve the honor.

- "Hollywood Reporter"

The film suggests a number of strange weird things, such as exaggerating gay masculinity (huh, that's funny, perhaps it just respects the original work)

- "New York Times"

If you watch original work, you'll find out the friendship between them is ambiguous, and that maybe the reason that the novel is magnificent, the film makes lots of money. Is that attracted to you? After all, it's kind of big-budget production, even that two handsome actors are not proper to that type of movie. Anyway, you can watch it on your ipad when you are boring on the metro, figure out how to watch video on ipad with a dvd to ipad ripper, then you can pass your time.

iPhone5 with 3D technology?

3D application on a mobile phone technology is becoming a popular in 2011, lots of manufactures including Sharp, LG, HTC have released smart phones that based on 3D technology, and recently, according to foreign media reports, an new patent of Apple shows Apple is considering to add a camera with 3D shooting function for iPhone5.

According to AppleInsider web site(foreign media) reports, the U.S. Patent and Trademark Office found the Apple patent application program called "Systems and Methods for an Imaging System Using Multiple Image Sensors". According to description, this application system can capture a process

and render 3D images through the corresponding two-camera hardware.

Considering a number of competitors in the field of 3D applications have tested this frequently, I believe Apple who always be willing to innovate and improve user' experience will launch mobile phone based on 3D, and if long-awaited iPhone 5 will integrate into this technology, we need to wait a long time to uncover the answer.

A revolutionary breakthrough has occurred in phone session, especially the rise of dual-core mobile phone, let us appreciate how powerful mobile hardware is. At this time, lots of high-tech fans are looking forward to the new productions, which obviously the iPhone5 attracts the attention of most people. For various reasons, the delay release of iPhone5 disappoints a lot of people, but also let us have more we can more expectations to the unexpected mobile phone market. In addition, Nokia and Microsoft have begun to make their effort to introduce several new heavyweight productions next.

Precisely, the fifth-generation Apple iPhone series are not necessarily called "iPhone 5", may also be called "iPhone4G" or "iPhone4GS", all the current news is just guess, according to the foreign media and insider that "Apple iPhone5" will be listed in mid-September. Price is still a mystery, but based on past experience, the initial listing price of iPhone5 must be a shock.

Compared to the previous generation iPhone4, iPhone5 still has a big change in appearance. According to first picture exposed before, the screen size increases to 4 inches, and the screen frame significantly reduced, it looks like just a screen at first glance.

In hardware, the upgrade is essential. The fifth generation of products may be equipped with 8 million pixel camera which is much better than four generations of 500W. In addition, this phone may support the 4G network and the dual-core processor, which allowing users to have more perfect experience.

Since 2007, after introducing the first generation of products, Apple launches a type of mobile phone every year, with its perfect operating experience as well as many fun applications, have won the majority of users' acceptance, this is an important reason that people look forward to the fifth generation. Untill now Apple hasn't announced a specific release time of iPhone5, so users can only wait for it patiently.

Not just iPhone5, the rumors about apple inc. will release ipad3 this year has already been spread all over the world, no matter what we think or expect, Apple inc. is the one who decide everything, so let's just wait.

New Medical Drama-Sirens

I have been watching American TV play series for a long time, the first one I finished is , (it arouses my crazy interest in science fiction), and , I hate the one who cut it, I mean maybe its audience rating has a decline after four season, however as a big fun, I was upset for it in a long time. Actually, when I was in high school, those dramas were very far from me, I barely heard any American opera soap, the first one I heard is , I bet most classmates of my are the same with me who has our own classical TV shows. Be honest, what my friends talked about at that time was not the story of but how gorgeous Wentworth Miller is. For some reason, now I have a big crush in those dramas, just one after another, I definitely become a total "no other show" person.

Recently Channel 4(UK) has released a new hospital comedy show -, a team of world-weary paramedics are forced to confront the dregs of society - not to mention their own inadequacies - in this comedy drama. Body is covered with someone else's body fluids, as ambulance care workers, three protagonists get through the night by fighting, quarrelling and sex etc. They have been saving other's life all the time, but can they save themselves? Executive producer Hal Vogel said: "Our goal is to produce a black comedy, discuss human living conditions from the

perspective of three completely original, funny, cute care workers.

Generally, we think Americans are the one who can do anything in the show (no offence), it turns out that British show is more open someway. Like this line: you can drive this car as you stolen it. The capitalist Big Brother has one-upmanship in any aspect. (If you are busy, figure out how to

copy

dvd to ipad then you can enjoy the show anytime, no matter where you are on the bus or closetool, you may know the drawbacks about iPad, if we want to watch other format videos except MP4 etc on ipad,

video

to ipad converter is essential, just in case you guys have some question about it).

The first scene is Stuart doing chest massage for a woman who hurt badly in a car accident, the scene is kind of bloody, feel excited, huh huh? Cos it is a British drama, so the lines are full of British humour, very witty. Protagonists are three young lads, Rachid, Stuart and Ashley, dealing with the wounded who struggle with death every day. I kinda like the subject matter, it is similar to the medical drama but more intense and has faster plot development.

Stuart is reckless but the leader in three, in emergency he is the one who stay in calm and do the right choice, Ashley is the cutes, don't argue with, he definitely is, and he is gay, I just hope the producer can arrange a cute guy to Ash. Rachid is an Iranian, a bit stiff. There is a policewoman named Maxine, and she has some ambiguous relation with Stuart, although she always dressed as a tomboy, but she was eager to love. In fact, she is beautiful, blond, fair-skinned. Be honest, that's not who I pay attention, Ash is my favorte, he is so cute.

Anyway, it has great level, perfect (forgive me, I just love it) in aspect of actor, story, humor, especially the music. In addition, the show's center of gravity is not in the first aid, the medical part only has 30% percent or less. The focus is still about the lives of several characters, about love and friendship. The first season has over, all six episodes. Let's look forward to the following season, hope the team won't disappoint us.

How Vulnerable is Apple

For the protection of customers, Apple does not disclose, discuss, or confirm security issues until a full investigation has occurred and any necessary patches or releases are available. It seems like that Apple get seriously about security, that's a assurance for apple production users. Yet, problems always will occur.

Like the following cases, after these, can we still trust what they say? Especially for those business users, there is a serious risk existing.

The Anonymous hacker group Claimed Sunday that it had stolen a small number of internal passwords and user names from an Apple server. But as if that's is an uncertified announcement, which means no one can say it's truth or just made up by someone.

Let's continue, Anonymous claimed responsibility for the attack. It is reportedly working closely with hackers who belonged to Lulz Sec, the hacking group that said it was disbanding last week after 50 days of hacker havoc that included hacking sites such as PBS.org (Why they hack that?). The breach at Apple exposed 27 internal Apple usernames and passwords. As Apple users, what do we supposed to do? Nothing, just wait for apple to fix that, no matter what's the result, Apple productions are still our favorite(or not?).

On Twitter (I have a love-hate feeling to it), Anonymous said Apple could become a target (why is sound like a terrorist to me?), but for now the members were busy with other hacking targets. "Apple could be target, too. But don't worry, we are busy elsewhere," the group said (they are really busy). Earlier this month, Lulz Sec claimed it had breached Apple's iCloud servers, which operate the company's cloud music and photo service. But the group posted no evidence of the hack (that's what I'm saying, no

evidence).

And another thing, as enterprise adoption rates for the iPad skyrocket, Apple has been forced to adjust its security thinking to placate its new business customers.

Just one problem: Employees won't be able to send encrypted email from their iPads, at least not yet. Blame Apple for an iPad email encryption capability that literally goes only halfway -- that is, to iPads but not from them. Apple says full email encryption will be coming in iOS 5, but in the meantime, users are stuck with a semi-solution.

"Symantec told us the problem is with Apple, they can't get the right interfaces into iOS," explains Wolfgang Krips, senior vice president of global IT infrastructure services at SAP. "It's not a deal killer but very serious, very frustrating." So goes the love-hate relationship CIOs have with Apple. Now the stakes are higher with iPads invading the enterprise at a meteoric rate. To be fair, Apple has responded recently to security concerns about its iOS. But does the company's newfound interest in enterprise security go far enough?

The attacks on Macs and Apple's response to them have stirred up new controversy in an ancient debate. Is OS X uniquely well protected from cybercrooks? As its market share increases, will it become a more enticing target? Are Mac users who don't use security software asking for trouble? Etc. Anyway, Apple knows its weakness and it is the first target for those hackers, what we can do is wait. (That's the reason I keep a distance with those high-tech stuff, not forbid, just have a limitation, or I just use some safe, easy functions like how to play quicktime video on ipad or how to convert mts to ipad on mac, just joking, if that's true... anyway it's not true)

Fairy Tale Movie-Beastly

I'm addicted to this movie is not because Alex Pettyfer, nope, not at all, you can see it from the icon of my profile, ok, he is definitely the reason that I'm here to express my excitement and recommend you guys to see it right now, besides, the story is attractive too.

Kyle (Alex Pettyfer, who else could be) is a seventeen-student who is sexy, rich, with everything other students always dream of, but under his gorgeous exterior there is a cruel nature hidden inside. Kyle likes to humiliate students who be called "freaks", and his followers always fan the flames. This time, he targeted a Gothic girl Kendra who is sorta of witch. Kendra turned him into a monster with a spell for revenging, and the only way to break the curse for Kyle is to find a girl who really loves him within a year. Even Kyle's father can not accept his ugly son, so he deserts him in an apartment in Brooklyn, only sent a butler and a blind teacher as his companies. While Kyle is struggling to break the curse, accidentally he bumped into a drug addict killed a drug dealer, Kyle promised not to inform the killer and generously provide protection for his daughter Linda (Vanessa Hudgens), the premise is she's willing to live up to his apartment. In this way, the journey that looking for true love is beginning.

Actually, seeing this type of adaptation of modern version of fairy tales, we don't have to take it too seriously, the story has long been clear in our mind, it means from start, we can know the ending, these traditional story has fixed routines, so it's very difficult to have some creation, and its audience must be young girls and boys, so if you know you do not like seafood, but insisting to have a taste, turns out that the film is not your taste, then it's not other people's fault. (If you are busy, figure out how to import videos to ipad then you can enjoy the show anytime, no matter where you are on the bus or closetool, and you may know the drawbacks about iPad, if we want to watch other format videos except MP4 etc on ipad,

dvd to
ipad ripper
is essential, just in case you guys have some question about
it).

I believe most teenagers who like watching Disney cartoons chose to watch this film, because they have some fairy-tale plot in their heart, and the pink dream that never broke up. Even the reality is flat and rough, they are willing to believe in love, believe there always someone is waiting for you somewhere.

Russell once said: "The essence of romantic love is regarding the one who you love as a very precious thing and extremely difficult to get, people need a tremendous effort to win the love from who you love!" "The Beast" in the film grows to a kind considerate person who knows how to care after others, who knows to respect other people from a selfish and arrogant person. We have to admit that is love make him who he is. From simply and frivolous buying some famous-brand products to please the girl who he likes to start know her who she really is and eventually win the love of the girl with a genuine and sincere heart, simultaneously break the curse, then we all know, happy ending.

If you expect some magnificent or great things from this movie, maybe you'll be disappointed, but if you have a pure love in your heart, you should see it.

Torchwood:the Miracle Day

Caption Jack has been back in July, Torchwood has released the fourth season - The Miracle Day, by now, we can enjoy eight

episodes or more, I'm not sure.

"Torchwood" is a sci-fi TV series created by Russell Davis and John Barrowman and Eve Myles act the leading roles. It describes a fictional story about torchwood Academy third division in Cardiff. The main task of Torchwood Research Institute is to research supernatural and extraterrestrial. As derivative drama of "Doctor Who" which is British science fiction television series that has longevity, there is a closely relation between these two dramas.

The first season had 13 episodes, already broadcasted on BBC3 in October 2006, and the second season also had 13 episodes which were broadcast on BBC2 in January 2008. And the third season was a mini-drama has 5 episodes, each episode was an hour, was broadcast in July 2009 in a week.

But there is a prominent difference between two shows, because the "Torchwood" is broadcast after 9:00 pm, so compared to "Doctor Who", it contains more adult content. Davis said "Doctor Who" is not allowed to involve any adult-oriented ideas in an interview of BBC Wales Radio. In the first season, we can see many scenes that never will be seen in "Doctor Who", including the sex scene (in "Day One" and "Out of Time" in), and similar to that appeared in many episodes. BBC3 thinks that "Torchwood" is the most shining series in fall of 2006. John said that "in the first season I do not have any naked scene, they said there would be in the second season, I do not mind naked as long as they pay me the right money, I am ready to show off my"....you know what he means, huh huh.

The fourth season "Torchwood- the Miracle Day" is broadcast in Starz. From the BBC to Starz, from Cardiff to the United States, "Torchwood" has new integration, there are new stories be told, and new characters debuted, as well as new enemies destruct the calm and peaceful life of human beings. ...To me, John Barrowman is always my idol, he is the reason I back to season4, but after seeing 8 episodes, I find the story is more attractive.

Suddenly one day, humans stop dying. The whole world, no one dies. But people are still very fragile and can be hurt or get sick, but they can't die. This phenomenon causes a merited result: the number of people is bursting. Population is growing, but resources are limited. It is said that in the next four months, the human will grow to the limit, the entire planet will overload. But

this "Miracle Day" can never be a natural phenomenon, it must be a very sinister conspiracy. Rex Matheson, a CIA agent, begins to investigate this global conspiracy, he races against time, and the answer relates to a very old institution Torchwood of UK. Rex has been keeping asking, "What is Torchwood?" He was involved in the vortex of this conspiracy, and he got hurt, too, but of course, he was still alive, becoming one of those walking dead. After he getting connect with Torchwood, he joined them.

I think that story is very attractive, we all want to who is leading this global conspiracy, and how the Torchwood will beat them, and of course, who will be Jack' Mr. Right, something like that. Anyway, you can watch it on your ipad when you are boring on the metro, figure out how to convert video to ipad on mac with a dvd to ipad converter, then you can kill your time.

Fun Puzzle Games on iPad/iPhone

Which of these are you playing right now with your iPad? Or none of them? If you are a game player, don't miss these games.

Hanging with Friends - Regard it as a very cute version of Hangman with a slight twist. You're given a couple of letters that you need to make a word out of. Create your word and your friend has to guess. After 6 tries, they fail, and their balloon pops! You can play 20 rounds once a time, it increases the attraction for all ages, because you will have some interaction with the opponent, having outstanding performance, your friends impressed must be very impressed. If you are good at puzzle, then this game is absolutely indispensable for you, you will be addicted to it.

Hanging with friends has developed a unique puzzle game that combines elements of Scrabble. First you have to choose your opponent, and playing with friends or chose opponents random to play, players choose a lively cartoon head and keep changing its facial expressions in the process of the game.

Player who begins first will create the first word, the second player can choose a separate letter in the alphabet to guess the word, they have eight chances to guess what letters are included in the word that the first player creates guess, if the letter is incorrectly, that player will lose a cute little balloon. And the second round, two players will switch roles, the second player will create a word and the first player is the one who should guess.

Players can select the background like in the crater or lava pits etc, so if the player's balloon was broken, they may die in these locations, so the players must guess the right words with their entire imagination and intelligence.

Egg vs. Chicken - So what came first? The chicken or the egg? This issue has been debated for thousands of years, and it's not just us, in fact, chicken and eggs fighting each other too, but this time they are serious, the war between a chicken and egg is breaking out. Then who will be the winner? Let's find out in the game. Egg vs. Chicken is developed by Playfirst who owns "Diner Dash", the quality of pictures is assured, and elements of the game is very rich, including a variety of interesting plots that are hilarious. You play the eggs and you have to stop the chickens from getting in your territory. Match at least three eggs in a row and roll across your opponents!

Burn the Rope -It is awesome, and seems like it had challenged the rank of "Angry Birds", almost 10,000 of the four-star rating must proves something, can't believe it has relieved the limitation, we can see everything is possible, huh. It's a fun puzzle game where you get to play a flame. Ignite the rope by tapping on it and make the flame burn upwards. Tilt the device to guide the flame around the rope. The flame will burn out if it tries to burn down, so keep tilting your device! Fun and creative, and free just for a limited time!

These games are quite interesting. Coupled with funny musicãcharacters and plots, we can get entire ease and make us more flexible when playing them. And a bunch of

ipad

games are waiting for you guys to challenge. For other ipad entertainment, you can enjoy free movies with
ipad

converter suite, games or videos, it's all your call.

5:36 AM

Final Destination5

Final destination5 is the fifth work of famous American horror series film "Final Destination" produced by New Line, like previous works, still filmed with format 3D film. And this time, "Death to the 5" about a group of colleagues in the field to participate in outreach activities death appears on the suspension bridge, let's see how those one who ain't killed in the collapsed accident will die with incredible ways.

Final Destination5 has a more luxurious team, directed by Steven Quale, he had been assistant director in the super classical films Titanic and Avatar in earlier time. And Craig Perry, the producer of previous four works has returned. He had also produced "American Pie" series (the classic of classic). Eric Heisserer, who creates story for "New Nightmare on Elm Street" writes story for this one, too.

The bombing of aircraft in the outcome has closely connection with Final destination1, so you can say it is the beginning also is the perfect end, anyway, you'll understand what I'm saying if you have watched the series. I'm not gonna say how wonderful the series is, it just the ways that those people die, I mean, really incredible, maybe this is the point that it attracts so many people, these ideas are so creative. I bet Final Destination series just try to tell us we can't escape from the fate, obediently accept our fate, struggle will only make you more painful. And the movie won't stop to prove that there are many ways to die, something you can't guess or imagine.

The first work of this series dated back to 2000, this small-budget film became a classic of CULT after releasing. But someone says this type film is hard to have much new ideas, 3D can only make up its drawbacks at a moment. Invisible death is more horrible than visible killer, which is a selling point of this series, but unfortunately in the fifth, those scenes are neither bloody nor surprising, is kind of funny. It should be said "to kill a scapegoat" is an innovative setting up, it can be regarded as a resistance to death, but the director did not carry out in the end. Scenes of the bridge collapse at beginning can be comparable with 2012 or something in special efficiency, and the plot is quite compact, but following plot, how those survivors die is kind of dilatory. The final death of actor and actress is a tribute from producers, make the entire story to a circle, finally gives a destination to death.

New Line chose Nicholas D'Agosto who is Claire' boyfriend in NBC sci-fi drama Hero, and many familiar faces we have seen in other dramas, like Gossip Girl, Mad Men, Flash Forward, Emergence Room, Anchorman: The Legend of Ron Burgundy etc. Maybe we are guessing if there be Final Destination^{6,7} or more, I mean this is how they planning, like Pirates of the Caribbean, Twilight, Harry Potter or something like that, anyway, enjoy this time and look forward next? Yet, watch it on your tablet with some friends may be more excited, I mean screaming together or something, so figure out how to rip dvd to ipad with a ipad converter for mac, then you can kill your time.

No iTunes TV Shows to rent

In 26, Aug, Apple quietly removed the iTunes Store TV rental. Apple released the new Apple TV in September 2010, while introducing of television rental service, providing the television rental service of \$ 1 per episode. But now the TV rental options just disappear, and Apple has confirmed the message that it has been removed permanently. So for those of you looking to rent your favorite TV shows from iTunes, you are too late.

A spokesman of Apple said, overwhelming data shows that consumers of iTunes are more desirable to buy TV shows, not rent. Now iTunes cloud allows users to download and watch their favorite TV show, as long as they have any device of IOS, not just Apple TV, even Macbook or Mac desktop, with them we can still enjoy these TV shows. iTunes cloud application was released in the WWDC conference in June 2011 for the first time, the, it supports resume, download music, books, and applications. And in earlier time this month, Apple has expanded its capabilities to allow users to download and resume TV shows on their computer and iOS, also, consumers can purchase the previous stream on Apple TV. Although the lease option is off, but the service to buy TV shows in iTunes still exists, \$ 2 per episode, \$ 3 per episode for high-definition TV. iTunes App Store provides a complete TV season. And it doesn't affect the movie rental in iTunes App Store.

Over the past year, rental prices have increased from \$ 1.99 down to \$ 0.99, but the users who are interested in leasing service are still very few. Finally, Apple decided to give up the business, because its upcoming iCloud processor can transfer the movies and television programs that saved in iCloud to iPhone, iPad or other equipment that iCloud can support, then users can watch them conveniently. iCloud is in testing phase currently and will be officially launched later this year, may be at the same time with our long-awaited iPhone5 and new iPod. The upcoming iTunes in the Cloud service will let you stream purchased content on all of your devices with ease. Considering the upcoming service, the rental of television shows just isn't attractive -especially when the cost of doing so isn't considerably cheaper than actually buying them, giving you all the time in the world to enjoy them on your schedule.

Knowing Apple, they haven't fully given up on television rentals. A lot of speculation suggests their next attempt will be with an iTunes in the Cloud television subscription service. Whatever they come up with, it will have to be more competitive with other streaming services out there right now. Hulu offers the streaming of many current television shows for free, while their plus service offers a large full-episode catalog for a low monthly fee. Netflix is another viable option, though their catalog is often somewhat slower to update. But I bet after Apple launching iCloud, most users will support them, after it's Apple, and if the release date is really the same with iPhone5 or iPad3, it will cause a great influence in the world.

Those Clash Between Apple and Sumsung

Just a few days ago, there was a big fight about patent dispute between Apple and Samsung in Australia, the most miserable sufferers must be enthusiastic fans of Android. Australia's Android fans should have been through a very depressed time, because this patent dispute, the Galaxy Tab 10.1 from Samsung Tablet PC can't advertise and sale in their country at that time, they just waited Samsung to get the permission of the court and that lawsuit ended. Previously, Apple claimed that the Tablet PC Android of U.S. version violated 10 patents of company. While the lawyers from Samsung argued the Galaxy Tab 10.1 Tablet PC sold in Australia wasn't same with American version, so Apple should not prosecute the patent issues of Australian version according to American version, by mutual agreement, the Samsung agreed to send this product to Apple to confirm whether it infringed the patent of Apple or not at least 7 days before releasing it.

Then Samsung denied the suspension of Samsung Galaxy Tab's releasing in Australia and announced they would release it as the original plan. According to the news that Ausdroid got from Samsung, the agreement that reached between Samsung and Apple was only for American version which had patent dispute, and Australian version was not same as American version, thus avoiding the problem of patent infringing. In addition, although Apple prosecuted Samsung because these patent disputes to the central court of Australia, but they just reached an agreement as a solution, and Samsung had also not received an injunction from Australia's central court, so it seems like that agreement had no influence to the sales of smart phones and tablet PCs of Samsung in Australia and other countries.

But now,

You have to admit, Samsung is really kicked by Apple. After defeated by Apple in Netherlands about the patent, Samsung once again announced they won't sell Galaxy Tab 10.1 in Australia before September 30. Even Samsung promised they would send the samples to Apple before launching it, and then did as promised, but Apple's lawyers insisted Galaxy Tab 10.1 infringed their patent. Facing aggressive Apple, Samsung is also planning a counter-strategy. This South Korean electronics giant will charge to the Court that the patent of Australia Apple is invalid, and even turn against Apple that they infringement Samsung's patent in iPhone and iPad. The next hearing will be staged in September 26th and 29th, I believe it will be very dramatic.

Except Australia and Netherlands, the district court in Dusseldorf, Germany granted Apple a preliminary injunction to against Samsung selling its latest 10.1-inch Android tablet in the entire European market. In fact, it's not because this court have any privileges, it's just Apple register the trademark design right for iPad, so this injunction can affect the entire Europe is not a strange thing.

No matter what the result is, the one who hurt definitely is Samsung. It seems like Apple has a great ambition to occupy entire Tablet market, TouchPad can't return back to life, and Galaxy Tab is under a big pressure because Apple, so the following Amazon, what's its future?

Comex(a Hacker) -I Will Be Starting an Internship With Apple

Who is Comex? Never heard that name before? Ok, what about JailBreakMe? If you are an Apple fan, then that's what we are talking about. Comex is the inventor of JailBreakMe. And not long ago, it is said that he will join Apple to practice, which let many people concern whether he will continue to contribute to jailbreak community and provide better way to jailbreak. In an interview with TechCrunch, he answered some questions and gave his view of Apple and jailbreak, and he will not only continue to jailbreak, but also he won't stay in Apple too long and plan sometime return to university. When asked what he think about Apple steals the jailbreak idea, Comex said he didn't that much care, because the jailbreak application's performance is usually not perfect, but Apple can make these things come true through a perfect method, make these things become system functions in the end.

A couple days ago, Steve Jobs announced his resignation as CEO officially, which made many Apple fans very disappointed and grieved. But at meantime, another News let us feel kind of funny, Comex, the famous jailbreak hacker, who is the cracker of sJailbreakMe3.0 develops and develops iPad2 jailbreak tool, said he has received Apple's invitation and prepared to go to work for Apple as an intern. Comex is a 19 year-old student in Brown University, his real name is Nicholas Allegra and he is a genius. Forbes has interviewed him before, showed us his other side as a common student. At the end of interview, the columnist of Forbes suggested that Apple should hire this talented young man. No one would have thought Apple moved so quickly, Comex did not disclose the scope of work in Apple, but apparently wouldn't develop jailbreak tools anymore. As for the congratulations from friends, Nicholas Allegra said, "I thought it could have negative reaction about my decision.

There are too many hackers get them in trouble because invading operating system, but also some hackers can get benefits because of this. Like Comex, which is Nicholas Allegra, an industry-renowned hacker who be famous for jailbreaking IOS, now get attention from Apple because his outstanding performance.

For the jailbreak program that provided by Nicholas Allegra, I bet you guys all know what it about,

how

to jailbreak iPad is no longer a problem for most of us right now, if users can successfully jailbreak, then they can run a variety of procedures on the iPad, iPhone, iPod, iPod touch and no longer need recognition from Apple. And more important, the program provided by Comex also support reversible operation, it means if you don't want to jailbreak anymore, you can restore your Apple product, which is insurance for users, so now you know why Apple want him. Allegra said, JailBreakMe is not used to steal or damage something, it just allows users to install any software that they want, but as a jailbreak tool, it is not welcomed by Apple, because once it used by those malicious hackers, may cause unpredictable consequences.

After introducing JailBreakMe 3.0, Allegra also release a patch for a vulnerability that he found in PDF, so users can erase their jailbreak marks to prevent other malicious hackers to find and use the same vulnerability. Before Apple released the official patch, those iPhone or iPad that have been jailbroken even more safe than those haven't been jaibroken to some extent. So all Comex do is just because his interest, no commercial benefit.

No matter what's Nicholas Allegra's future will be, we will not forget this low-key big boy's contribution to the iOS users, hope his future is bright.

He Changed the World Time after Time

The buttons are everywhere, plastic shell, Windows operating system, and the ugly shape that can let people be crash, you guys probably don't know what I'm talking about, ok, the Tablet PC before iPad appears, that's what I'm talking about, can you believe this is Tablet PC for normal people? However, the previous "Tablet PC", or more clearly, before the launch of iPad, that's what they look like, People always have question about what Jobs said, "Once again, change everything". If Apple did not release iPad, we won't know what Tablet PC would look like nowadays. But history has no assume, all of the facts that have happened just prove a truth - although Jobs is ruthless, stubborn extremely and has a not very good character, but he has changed the world again and again.

Steve Jobs has special insights on the industrial design insights and meticulous work attitude, we can see his influence to way of life in 21st century from 313 patent invention he involved. In addition to manage daily operations of Apple, Jobs also plays an important role in development process of many products, from Macintosh computer to iPod, iPhone and iPad. Among Apple's patent portfolio, Steve Jobs is the main inventor or co-inventor of 313 patents. In contrast, Bill Gates, the Microsoft co-founder only listed as the inventor of nine patents, Larry Page and Sergey Brin, the Google co-founders only described as "a dozen." Specifically, Steve Jobs is listed in the first position of 33 patents, which means he plays a very important role. The most patents he takes part are related to shape and feeling of products. There are over 200 patents developed by Jobs and Jonathan Ivy who is Apple's design chief. Except that, some patents that Steve Jobs involved are related to technical details like software algorithms and computer chips etc. Now he resigned from Apple, his fans make lots of funny pics to show their love to him.

Maybe want to challenge marvelous Jobs and his Apple team, there always some hackers keep show up and prove they are better than technical team of Apple. According to the Science and Technology Information Station PCWorld reported that two Linux enthusiasts have successfully crack iPad, and implanted Linux along with the Android system to iPad, so who can say there is no jailbreak tools

to use after Comex have been hired by Apple? More and more professionals begin to challenge iOS.

These two Linux enthusiasts are Patrick Wildt and Rick Taylor, they produce an iDroid, it can break iOS and allow Linux ran in iPad / iPhone / iTouch 4. Although there is no much information about jailbreak details, but Linux can be ran on iOS, that is exciting news anyway, because Apple's built-in A4-chip device is to prevent implanting other systems. According to the description of iJailbreak, after iPhone 3G, jailbreak iOS become more difficult, so that two techniques hackers do have extraordinary talent.

Two hackers will release more details about iDroid later, but now Patrick and his companion are experimenting with how to implant Linux in iPad 2, it has been proved a bit difficult (just like the process break iPad 2 in early time). However, with new crack technology, we expect to see the iPad with Linux.

Can You Guys Be More Cute

New soap opera - Suites. Mike Ross is a young bright college dropout, he came to the law firm where most famous lawyer Harvey Specter works by accident, Harvey was tired of the monotonous law school graduates, so after he talked to Mike, he was impressive by Mike's talent, so he decided to hire him as his deputy, then Mike got far away from his life as drug dealer. Mike and Harvey formed the victorious team, even though Mike is a genius, but he still has a lot of legal stuff to learn. Mike is a very smart lawyer, although he didn't get a degree. He became a member of the most famous law firm in New York from a drug dealer who also helped law school students cheat in exams. He joined the law firm, became Harvey's deputy, but in addition to talent, he also had a lot to learn to survive in fierce competition. He also needed knowledge and experience from Harvey. Because grandmother's expensive medical

expenses and his ignominious past, Mike had to prove his worth in the first case. To win Harvey's recognition, he needed to utilize his talent, ability, wisdom in actual combat.

How to become New York's best case Terminator? The answer is doing things in unusual way. Harvey reaches great achievements and accumulates a high reputation by breaking the routine rule. Whether choose a bar hostess or CEO of big companies, Harvey's behavior makes him a very efficient lawyer, and his very slippery. But he has not forgotten why he wants to be a lawyer and what a lawyer should do. It maybe the best decision to hire Mike as his deputy, also, he learns a lot from Mike, like kindness and justice. From many common public cases that Mike takes, Harvey discovers there is something more important than money and reputation.

To see if a legal drama is good enough, one of the criteria is whether its lines wonderful or not. Be different with those eloquent lines in "Boston Legal", those writhers' skills in Suits is reflected in the daily dialogue and play the cleverness to the extreme. After a couple of episodes, what cases that protagonists took in every episode impression almost have been forgotten, but those puns still occur to my mind all the time and make a lot of fun. There are many bickers and metaphors in the conversation between the characters, if you don't pay full attention to the dialogue, you may don't understand what they are talking about.

In addition to smart humorous dialogue, another selling point in Suits is the two seductive actors, one is mature, the other is cute, the relationship between them in play is ambiguous, all those talks and behaviors just let a special group think there is something else between them. This Play called "Suits", actually is a workplace inspiration drama wrapped in a cloak of Law. As a successful example of young lawyers, Harvey always wears high-end suits in the play. But Mike don't have any taste about these fashionable things, so he doesn't have decent suits, because of this, Harvey make a lot fun with him, besides this, there are many funny plots about suits in the drama. This play is a highlight in off-season of soap drama, the response is pretty good and the second season has subscribed.

Plus: if you would like to add them to your iPad to watch for

free anytime anywhere, download a
dvd to
ipad for mac, then you'll figure out
how
to get dvds on ipad. To me, this play is kind of like White
Collar, Matt wears suites all the time, and I think he is the best
visual prolocutor of suites, I mean those clothes just look very
suitable and pretty on him.

Amazon Kindle Tablet with Low Price

The iPad is the world leader in tablets, but Amazon is reportedly nearing launch of its new tablet. Someone has got Amazon tablet, and revealed some information about its hardware and software. In hardware, Kindle Tablet is equipped with a 7-inch full-color touch screen, single-core processor, and the built-in storage space is only 6GB. And there is no physical button in front panel, no camera, the back cover design is similar with BlackBerry PlayBook. In software, Kindle Tablet's operating system is Android of the old version of (even earlier than 2.2). And it doesn't come with any Google applications, all applications need to be downloaded by Amazon appstore. This 7-inch tablet will be on sale in October, the price is only \$ 250. Meanwhile, Amazon will launch 10-inch version next year. The lower price is in the attempt to come out strong in competing with Apple's iPad.

Apple's iPad is the global tablet leader, though the fire sale \$99 TouchPad made a brief appearance on the sales radar, but the biggest threat to the industry leader is on its way as Amazon is reportedly close to shipping a new tablet - its first. The Taiwan tech newspaper quoted sources at component suppliers saying Amazon's first tablet verision, a 7-inch unit, is being manufactured by Quanta Computer, and that it will begin shipping in October, in time for holiday sales.

Amazon is expected to price its new tablet lower than Apple's iPad, particularly in light of the TouchPad's success during the \$99 fire sale after HP discontinued the product. Amazon isn't likely to dip that low in pricing, but the company could dip below

the \$300 price point and find success, some analysts say.

"Even though Amazon taking on Apple is a bit like David taking on Goliath (compare the market cap, profits, and cash position of the two companies), Amazon's willingness to sell hardware at a loss combined with the strength of its brand, content, cloud infrastructure, and commerce assets makes it the only credible iPad competitor in the market," Forrester analyst Sarah Rotman Epps said in a research note. Amazon's Kindle has sold more than any other e-reader device, and the company is likely sell its new tablet at a loss on hardware costs to gain new customers and parlay other profitable services including content, cloud infrastructure and commerce assets to make a credible competitive run at Apple, easily the global tablet leader.

Amazon's new tablets are expected to run on Google's Android operating system. Amazon already has an Android apps store on its online retail site, and if the company's new tablets find success more app developers are expected to jump on board with new Android programs, eventually rivaling the number currently available for Apple's iPad.

Even as the iPad sells tens of millions of units, it's clear there's a hunger for a lower-priced competitor. The HP TouchPad sold out in a couple days last month after the price was dropped from \$399 to \$99 - a result of HP abandoning the product altogether. So Amazon's lower price and its similar functions with Apple maybe can make a good expect, not just for them and for us who deadly want a cheap Tablet.

iPad Has Replaced Traditional Textbooks in High School in Some Ways

The new semester has began, while other high school students carrying a heavy bag into school, most high school in America have let their students replace their heavy school bags and books with Apple iPad. No matter electronic textbooks or related materials or online resource, they all can be obtained in iPad. Since Apple iPad has launched iPad in the spring of 2010, this Tablet PC was welcomed by many universities in American in a short time, and from this autumn, more public schools have joined this queue, abandoning the traditional teaching, utilizing light and powerful iPad.

Compared with traditional textbooks, cost \$ 500 to buy an iPad, is a better long-term investment, but those courses that don't have e-learning materials, school still use the traditional textbook. Of course, they have calculated the cost about replace traditional textbooks with iPad, and it's cheaper with iPad. Except for cheaper cost, another reason why iPad is suitable for school is their powerful functions. Some educators believe that iPad has lots of functions that traditional textbooks don't have, like solving mathematical problems with an interactive way, and the convenient scratch pad and bookmarks to take notes, send the test papers and homework to teacher very quickly, and watch videos about historical events to deepen students' impression.

For those special education teachers, it has much better efficiency to communicate with those kids who have autism and learning disorders via iPad, cos it's easier to express themselves through visual image than communicate face to face. Advocates believe that, iPad e-learning is an interactive way, which more suitable for today's students, because for them, the electronic device is part of their life, not mention mobile phones or something, every high school kids want iPad, and now school provide this hot thing to them, why wouldn't them want it? So, get students' support is an easy issue. Also there is always different voice, some scholar says even students has the most modern equipment, they still needs a scientific curriculum development and experienced teachers. As the saying goes, music is not piano; similarly, learning is not the device.

And more, there is something else that iPad can do, such as chatting, playing games, listening to music or watch videos, so who

can guarantee that students are studying with iPad not playing something else, now that school is the one who provides iPad to students, there is no doubt that it should make some strategy to make sure students use iPad in a right way, to educate their teachers in addition to their students so that the tablets could be fully utilized, to make the tablets into something more than just a technological toy, which meant blocking YouTube and helping students to focus, rather than letting them talk about the best

dvd to ipad software to enjoy free videos with ipad or mac

video to ipad or something else.

The whole world has been changed with the development of technology, you keep up with it or you will be weeded out. As to Apple, its contribution to us is tremendous, not just school has taken it as teaching device, and the army or airline or companies, they all have or be ready to import technical products like iPad. So don't be spoffish.

The Amazing Spider-Man

Spider-Man's prequel which has been called "the new Spider-Man" now finally has named to The Amazing Spider-Man. Amazing Spider-Man is first one that been released to meet audience and also has the longest duration in the whole comic series. In 1962, Stan Lee created the Spider-Man, at that time, Spider-Man was a character in the comic "Amazing Fantasy", because this character, this comic became popular, and it has been renamed as the "Amazing Spider-Man". Those TV shows that based on this character all called amazing spider-man before. It seems like this time Marvel, Sony and Columbia Pictures are ready to show us a more authentic Spider-Man. This time, Spider-Man will return to high school, and of course, movie will be released in 3D. "The new Spider-Man" is expected to release in July 3, 2012. Amazing Spider-Man is directed by Marc Webb who directed Days of Summer and the new Spider-Man will be played by Andrew Garfield who has impressive performance in "The Social Network".

So you already know Marc Webb is the director of Days of Summer, but do you know that movie is the only one that has a little influence in the screen among his movie, or do you know that movie is a literary film that about love and heartbroken feeling, or do you know the investment of Amazing Spider-Man is 20 times than Days of Summer, so it's not strange that if someone will worry Marc Webb will film a hero to some literary sensitive high school boy, and the whole story will be a love story with monsters. Not long before, Tobey Maguire talked about his expectations to Spider-Man 4, and said he would give more develop space to this role. But it turns out that he quit continuing to play spider-man, and his spokesman hadn't responded much.

As to Andrew Garfield, if you have watched The Social Network, then you must be familiar to him, he played the best friend of Jesse Eisenberg in that movie, and he is 28 this year, so let's see how he play a high school student, that's the main reason that Tobey can't play Spider-Man anymore.

Matt Tolmach, the president of Columbia Pictures said, over the past decade, it was a very exciting thing to co-operate with such good actor and director like Sam Raimi and Tobey Maguire. This time we use a brand-new team to film Spider-Man 4 is bittersweet, after all it's hard to imagine that who can play Peter (Spider-Man) except Toby, but for us, this is a new start. Previous Spider-Man series have made over \$ 1.1 billion, undoubtedly, it's the most important money maker of Sony. If the new version of the film can get support from their fans is still unknown, more detailed information will be released in stages in the near future. Let's just wait for 2012 - the Amazing Spider-Man. Even if you are not too addicted to that kind of movie, but when you are on the bus or closestool, watching it on iPad is sort of entertainment, just need to figure out how to convert dvd to ipad with a dvd to ipad ripper, then you can criticize these Hollywood pattern movies to the top of your bent.

Windows 8 Tablet - Another Competitor of iPad

Lots of analysts think until the end of 2012, Apple will continue to dominate the Tablet market. In addition to iPad, there is no other Tablet in nowadays mobile market that have high market share. We are still waiting for the emergence of competitors, but the truth is not optimistic after what happened to TouchPad. So it seems like we have to wait until the second half of 2012 when Windows 8 be released officially, see what it gonna to be. But one thing you should pay attention to, the Amazon, with brands, content and sale advantages, Amazon may consolidate non-Apple Tablet market, but who knows, it not gonna take long that we will know its fate. So here Windows 8 is the hot point right now.

The first Windows8 tablet looks set to be revealed with the help of Samsung at Microsoft's BUILD developers' conference next week. And if we had to guess, it'll likely be announced during the morning keynote from Anaheim, California. A few weeks ago, you'll recall, Microsoft was already talking about a quad core Windows Slate that will be given out at an upcoming Microsoft event. Hell, it even flashed a thin reference design to the crowd in a moment of dramatic titillation. Mind you, we're almost certainly talking about a quad-core ARM processor inside - not Intel - given the lack of ULV quad-core silicon from Chipzilla and the fact that NVIDIA is talking up its Windows 8 compatibility so gregariously on the eve of its Kal-EI launch. And now, thanks to an industry source speaking to the Korea Economic Daily, we know that Samsung is very likely the manufacturer behind this first Windows 8 tablet. In fact, you might want to attend BUILD yourselves, where we expect Microsoft to hand out the Samsung tablet to every registered developer in cahoots with its plan to build a "no compromise" tablet running a full desktop OS.

In any case, Windows 8 system is the key that related to the success of Microsoft's Tablet. Therefore, we all can't wait to know who will bear the brunt of running Windows 8. At earlier time Samsung has announced that Samsung Series 7 Slate PC could upgrade to Windows 8. And now the interesting thing is, we've independently

heard that Samsung would be making the BUILD tablet, so we're feeling good about that one. We've also heard that it would be designed by Microsoft, which suggests that Redmond is keen on controlling the entire hardware-software message for Windows 8's tablet push - not surprising, considering how important the tablet market has become in the past year.

The practice of using Windows 8 system has great significance to Samsung, make the system of Tablet diversified, rather than simply rely on the Android system, which means users can also have more choices.

And according to someone, Samsung will show the Tablet that carrying Windows 8 system in the BUILD Microsoft Developers Conference that be held next week in California. This will be the first Tablet that equipped with Windows 8 showed to public.

Although this news will excite us, but it's obviously that there is one more year until Window 8 will be launched, so Apple will continue to dominate the Tablet market at least for one year, so iPad is still our first choice, such being the case, if you have iPad right now or ready to join us, there is something latent capacity you need to know and dig, like

ipad

OnBeat Xtreme Speaker, TNT App and mClerk on iPad

A ton of manufacturers keep producing their own unique software to run on the Apple productions like iPhone, iPad and iPod. They popularize their brand, and we consumers gain more interesting experience. So let's see what new interesting apps that have been added lately or will be add to Apple soon, you may like them.

JBL's new OnBeat Xtreme speaker for the iPhone, the iPad, and the iPod Touch is a high-performance wireless speaker and dock that works via Bluetooth to deliver amazing sound that scored best-in-class blind listening results. The speaker is designed with a rotating connector that lets you position your iDevice in

portrait or landscape mode to display video, making it suitable for video chatting, music, gaming, music, TV shows, and more. With JBL Ridge Tweeters and JBL Atlas woofers, featuring computer optimized DSP equalization, the Xtreme promises to provide an incredible sound performance that will likely have your neighbors knocking at your door if you're not careful with the volume control! Thanks to Bluetooth connectivity, the speaker works with your iPad docked or undocked. It's the perfect companion for relaxing with music or watching movies, but it's powerful enough to provide music for your next party.

Following NBC's footsteps, Turner Broadcasting System just released the TNT iPad app, which gives you complete access to full-length television shows and movies aired by the network. The new app provides you with a lineup of TNT Dramas that you can access wherever and whenever you want. Appreciate that, but the truth is we can't watch programs of every channel, after all, just NBC and TNT have do something, so if we want to watch all dramas or movies on iPad for free, we have to via iPad video converter, then we can convert movies to iPad to enjoy more shows and movies, so let's just hope that more channels can sacrifice their show to iPad, and now TNT's iPad app gives you complete access to behind-the-scenes videos, program guides and also schedule reminders. It also integrates with GetGlue, Facebook and Twitter allowing you to share with friends all kinds of updates. As an authorized user, you can watch clips and full episodes of The Closer, Falling Skies, Rizzoli & Isles and more. But the key word here is "authorized user". That's right, in order to use this app you must have a subscription with a TV provider to get full access to video content. Perhaps one day, all content owners will start providing online access to their video libraries without requiring a paid TV subscription.

At the Apple Store, Apple employees use iPads to demonstrate other Apple products and as a retail tool to process purchases, Genius Bar appointments, and help with customer service. When 2012 rolls around, you may see additional retailers and restaurants implementing the iPad as a sales tool, thanks to the new mClerk application from AisleBuyer, a company known for its mobile checkout solutions. The mClerk is the first application targeted

towards store associates, to assist in customer marketing, sales, and service. The app combines a mobile commerce platform with customer analytics and a customizable user interface with checkout capabilities to improve employee interactions with customers and to make shopping a more enjoyable experience for consumers.

Have anything that you are interested? Anyway, as time goes, there are more useful and interesting apps will be released to surprise us, and I will introduce them to you in time. Keep paying attention to my blog.

Samsung Filed A Complaint against Apple on Tuesday

There is new evolvment about patent fight between Samsung and Apple. We all know that that two companies began to kick each other long long ago, obviously, who stared it is not important, as an Apple fan, I think the important thing is Apple is gonna have a tough time, facing so many competitors, HP, Amazon, Sony, not to mention Windows8 is coming, so it's reasonable that it feels be threatened and do something to retain its advantage. But the other company is not just some coward, they will challenge the giant and weaken it as possible as then can. So let's see what exactly happened between Samsung and Apple.

On Tuesday, Dusseldorf (Germany) Higher Regional Court said Samsung had filed an appeal to against the adjudication which been made last week that prohibited Samsung to sell its Galaxy Tab 10.1 Tablet in Germany. That court suggested in an announcement on that day that Samsung didn't expound its reason. In that adjudication, Samsung can't sell Galaxy Tab 10.1 Tablet in market of Germany, and Samsung's German subsidiary can't sell Galaxy Tab 10.1 in the entire EU market. Now according to media's report, On Monday, Samsung Electronics confirmed that it filed a complaint against Apple, Inc. in France for infringing on three of their patents. It looks like Samsung is trying a different approach.

Apple recently received an injunction against Samsung in Germany

based on the physical attributes of the Galaxy Tablet 10.1. The latter is trying to gain support for the technical patents instead. The Samsung complaint was filed in July, but is not expected to be heard until this coming December. The complaint is against Apple's iPhone 3G, iPhone 3Gs, iPhone 4 and both generations of the iPad. The two technology companies have been battling it out in the patent courts since April of this year when Apple filed complaints against Samsung for copyright infringement of their smart phones and tablets. Samsung filed counter suits in the U.S., claiming that Apple infringed on 10 of their patents. Since then, both companies have filed complaints against each other in Europe, Australia and Asia as well.

And let's back, previously, Apple claimed that the Tablet PC Android of U.S. version violated 10 patents of company. While the lawyers from Samsung argued the Galaxy Tab 10.1 Tablet PC sold in Australia wasn't same with American version, so Apple should not prosecute the patent issues of Australian version according to American version, by mutual agreement, the Samsung agreed to send this product to Apple to confirm whether it infringed the patent of Apple or not at least 7 days before releasing it. Then Samsung denied the suspension of Samsung Galaxy Tab's releasing in Australia and announced they would release it as the original plan. According to the news that Ausdroid got from Samsung, the agreement that reached between Samsung and Apple was only for American version which had patent dispute, and Australian version was not same as American version, thus avoiding the problem of patent infringing. In addition, although Apple prosecuted Samsung because these patent disputes to the central court of Australia.

Confused, right? That's what happened before, and it's just the tip of the iceberg, I bet it will not end in a short time, who knows who will win. But personally, I'm on Apple's side, do you? And as Apple fan, you definitely have to know these things:

The Sluggish sales of PlayBook

I have talked about those competitors who against Apple enough, I mean HP, Samsung, Sony, Amazon, Microsoft, they all have released TouchPad or will release or will do something that related to TouchPad, even Lenovo, ok, Lenovo's TouchPad can not even be called "a competitor of Apple", so we can ignore it. Just a ring bell, do you remember PlayBook? How can you just forget it? It belongs to RIM anyhow. Don't get me wrong, I'm not defending for it, I just want to get your attention, and plus, I'm always on Apple's side. Anyway, let's see what happens to PlayBook recently.

Research in Motion (RIM), depending on its new PlayBook to bolster sales as demand for its BlackBerry phones withers, may have shipped just one of the tablet computers last quarter for every 19 iPads from Apple. The company, probably sold about 4,90,000 PlayBooks during the first full quarter of sales, according to a Bloomberg survey of analysts, compared with the 9.25 million iPads shipped last quarter. Analysts cut estimates for full-year PlayBook shipments, to an average of 2.2 million, according to the survey. "RIM overplayed the PlayBook in terms of its sales and prospects," said Charlie Wolf, an analyst at Needham & Co in New York. "What this really shows is that the company's prospects will depend on the next generation of BlackBerrys." When RIM first disclosed plans for a tablet last year, analysts said the device had the potential to evolve into a significant new product category. Yet RIM didn't get the 7-inch tablet to market until April, a year after the first iPad and behind rivals such as Samsung Electronics. Even then, RIM drew criticism for introducing the PlayBook without dedicated e-mail or instant messaging and a shortage of consumer applications like Netflix movies. The company will ship about 1.5 million tablets this year, compared with 39.2 million for Apple and 7 million for Samsung, RIM hasn't given up on the Play-Book, but it's clearly off to a poor start. And we all know that Apple will release iPad3 soon, what iPad3 can do is unknown by now, but at least we know that we can enjoy all kinds of video via copy dvd to ipad and sync itouch videos to ipad, no doubt that iPad3 will be more powerful, and it will be more convenient, at that time, the other Tablet will face a serious situation.

Someone says the PlayBook is perhaps the most useless thing to ever be released and yet it continues on with promises from the company that they'll fix it. That's not a product strategy. Even compared to TouchPad, it can't get any advantage, don't get me wrong, I'm not saying the TouchPad was perfect, apparently it wasn't. However, it had the best chance to take second place to the iPad. More importantly, it had webOS, which many people thought was probably the best alternative to iOS. And now, see what happens. TouchPad has gone, PlayBook has sluggish sales, and now RIM just counts on its BlackBerry to make up its loss and dignity. RIM started selling phones that run on the BlackBerry 7 operating system in the US this month and in Europe last month. The company plans to shift to a new operating system, QNX.

So what am I saying? iPad VS PlayBook sales: It's 19:1, I'm trying not to be too exaggerated, but it's the truth, right? Apple is marvelous, and apparently we will chase after it for a long time, so let's just forget about PlayBook.

Alternative Performance of Kevin Spacey and Colin Farrell You Never Seen Before

For those viewers who like to watch Hollywood stars, then you can't miss "Horrible Bosses". It's a comedy, and a star-studded film, I mean Colin Farrell, Kevin Spacey, Jennifer Aniston ... almost every actor is the major suit in the world, but if you don't know those three stars, then it's another thing, but as I say, it's a comedy, so the hilarious story may can attracts you, anyway, who can reject a movie that has a good box-office.

The movie is about a story that three staffs couldn't tolerate the oppression of their respective bosses, and ultimately they made a plan to kill the each other's bosses ... and the process they implemented the plan is very funny and full of black humor. For Nick (Jason Bateman), Kurt (Jason Sudeikis) and Dale (Charlie Day), they are just ordinary men that work in the office, and to get promotion, they have to tolerate the insult from their bosses,

and their bosses all have some specialty, what goes on their mind all day is how to torment and insult their staffs, you can say that they are kind of perverts. Nick works for Duff (Kevin Spacey), who is an asshole that very strict to his staffs. Kurt works for the man that played by Colin Farrell, and he is a strange neurotic who is middle-aged and bald, and addicted to play tricks on his employees. And maybe Dale is the luckiest one, because his boss is a beautiful woman that played by Jennifer Aniston, but she is a extremely serious nymphomania, always flirt with Dale in the course of their work regardless of conditions, make him so miserable.

At last, they just can't stand it, so their "kill bosses" plan begins. After then, the only thing that would make the daily grind more tolerable would be to grind their intolerable bosses into dust. Quitting is not an option, so, with the benefit of a few-too-many drinks and some dubious advice from a hustling ex-con, the three friends devise a convoluted and seemingly foolproof plan to rid themselves of their respective employers...permanently. There's only one problem: even the best laid plans are only as foolproof as the brains behind them. And those bosses in the film are very impressive, they all devote unprecedented exceptional performance to audience that they never showed before. Kevin Spacey is undoubtedly the most unforgettable, and the boss who like sexual harassment played by Jennifer Aniston also gave us many surprises, totally a subversion of her previous image, we can see the obvious improvement of her acting, of course, don't forget Charlie, he is the most interesting role of entire film.

Kevin is awesome, and Jennifer, undisputed, a beauty, you know, she is 42, and dose she looks like 42? As to Colin Farrell, he always gives a charming impression, but in this movie, middle-aged, bald, can you imagine? And those hilarious lines and plots, I gotta say you wouldn't want to miss it, even though it doesn't have gorgeous stunt and expensive investment, but when you are on the bus, watching it on iPad is a really good entertainment, and if you know to add hd videos to ipad, then try HD version, cos we all know it has better effect, but if you don't care the high definition, the standard version is ok though, dvd to ipad ripper can do that for you, I promise when you see Colin's

bald head and how Jennifer seduces Dale, you just can't stop yourself laughing, seriously, it's the best comedy in this summer, compared to "Jumping the Broom" or "Bridesmaids", yet "The Hangover 2" is pretty funny though.

J.P. Morgan Analyst: iPad3 Is No Rush for 2011

He said: Apple should be in no rush, which means iPad3 should be in no rush. Here "he" is an analyst called Mark Moskowitz, according to he, Apple should be wait to release iPad3. So what's this about anyway? Those rumors about iPad3 have spread for such a long time, when people, at least me just keep waiting its coming all the time, and now they say: no rush.

Analyst Mark Moskowitz with J.P. Morgan revealed on Friday that his conversations with industry insiders (who are those insiders anyway) have revealed that Apple's next iPad will not be available until sometime in 2012, even as prototypes for the device begin to circle in the supply chain. For some months there was rumor of an iPad 3 this year, or even an iPad HD (or iPad with improved resolution) this year with an iPad 3 coming next year. As always with Apple products it's a waiting and guessing game until the company chooses to let us know more. However a report on Apple Insider by Neil Hughes suggests there's not exactly a need to release another iPad this year, especially as Apple still has no real clear contender in the tablet market (that's true). Throughout 2011, reports persisted that Apple planned to release a high-end successor to the iPad 2, which was released in March. Rather than replace the iPad 2, it was said the new model would grow the iPad family, perhaps by offering a higher resolution display.

And while Apple works behind the scenes on its next iPad, in July an alleged "iPad 3" part was discovered. A report accompanying that component suggested the model would sport a "brand-new design." But Apple should be in no rush to grow the iPad lineup, in Moskowitz's view, as competitors like Motorola and

Research in Motion have disappointed with their own competing offerings. RIM announced on Thursday that it has shipped just 200,000 PlayBooks, far less than iPads Apple sold in its most recent quarter. According to recent figures released by the International Data Corporation (IDC), Apple's iPad 2 shipped 9.3 million units in the second quarter, hitting a worldwide market share of 68.3 percent, that's good news though, iPad2 has such unbelievable sales, but why we still desire for iPad3, because when Apple release his new products, that means they have improved them, which means iPad3 must be better than 2, we all know if we want to play flash video on ipad, we have to do it by video to ipad converter, so when we say we want iPad3, it just means we hope iPad3 have powerful functions that iPad2 doesn't have. Moskowitz says the next threat may not come until late 2012, with the arrival of devices running Microsoft's new OS, Windows 8, just like I said before, Windows8 is coming, and Sony is working out its own Tablet, too. But you see, HP, Samsung or what else, they are so weak to compete with Apple, and HP Tablet just disappeared, so that's exactly what's happening with Apple in the tablet market, with competition to the iPad 2 so weak Mark says Apple should be 'in no rush' to release its rumoured iPad 3. And for now, with tablet shipments for 2011 expected to reach 62.5 million units, Apple can sit back and enjoy the ride. But for us, honestly, we don't want to wait any more.

Bruce Willis and Ryan Philip in 50 Cent's Movie "Setup"

This film is the first big-budget production (kind of) produced by Cheetah Vision that founded by 50 Cent in 2009, and yes, he is the protagonist, it may be the most mainstream film that 50 Cent played as protagonist, because for the first time, he invites Bruce Willis, Ryan Philip these big stars.

50 Cent still plays a criminal in the film just like his other movies, and this time, it's a robbery-related movie, but we can see that his image has no difference with his previous roles, extremely similar. The story revolves around with the diamond robbery, and those criminals related to diamond begin to fight each other because of the robbery. Actually, the story has no attractions to me, I mean it's not creative, we can find a bunch of this kind of movies now,

After watching it, my friend said, it's utterly boring, just killing several people, running for a few minutes, at this time, if this Hollywood action film has no shots about car crash, then it should be shamed to face audience, and unfortunately, Setup has no irritable plots, so no wonder it is thrown into the DVD market directly! But there is one plot about that butcher mutilates corpse and processes into steaks is very exciting though, unfortunately the director has no balls to show those lens to stimulate the audience's stomach and just express them in a civilized way, what a shame!

You can see the style is tough and the performances is satisfied somehow, but it's kind of procrastinating, and some of those clues are dispensable, cos we all know that action scenes are very difficult to have a good expression with low-cost, a dozen of various tough guys just died easily, like Bruce Willis, I mean, come on, he is a mob boss, how can he just dies like that? And we can see that adding those untimely black humors into serious criminal theme is the biggest flaw, cos we don't know it's a criminal theme movie or just a comedy. Even it has those weak plots, but when you are on the bus or closetool, watching it on iPad is sort of killing you time as an entertainment, you just need know how to

copy

dvd to ipad (as I said before, it's thrown into the DVD market directly) with

dvd to

ipad ripper, and let's just ignore those retarded plots, keep our eyes on Willis and Philip, enjoy it as a comedy.

And Bruce Willis, he is a legend, most of us want to see this movie just because of him, I can say that, but in this movie, he is just a guess performer, and his bodyguard, that big tough guy, he even doesn't know how to use a gun, he just blows his head and dismembered by butcher. Back to Willis, after being fooled by 50 cent, and can't find him anywhere, suddenly, 50 cent shows up with his money that robbed from Russians, with a few retarded excuses,

and Willis believes him, kids even know 50 cent is lying and those words have no persuasion, but as a mob boss, he believed. As to Ryan Philip, he is so cute, so when I see him playing a bad guy, I just can't stand it, cos I can't find any place of him looks like a bad guy, so he is not good at this kind of role. Ok, here is his story, to protect his father who is in jail, he betrays 50 cent, and then 50 cent begins to chase him, at the end, he finds him, but lets him go, say what we are brother or something blah blah blah, anyway, boring boring boring, so I wonder how Willis and Philip agree to join this movie.

Students Who Take Advantage of iPad have Better Performance

We all know that iPad has permeated the college or high school in America. Apple will donate a bunch of iPad2 to schools now and then, lots of schools have replaced traditional textbooks with iPad, and I bet students are the happiest beneficiaries, because everyone wants iPad, and as students, they don't have to pay for it, they can use it for free. No matter electronic textbooks or related materials or online resource, they all can be obtained in iPad. Since Apple iPad has launched iPad in the spring of 2010, this Tablet was welcomed by many universities in American in a short time, and from this autumn, more public schools have joined this queue, abandoning the traditional teaching, utilizing light and powerful iPad.

And recently, Apple co-operates with the Teach for America program, donating 9000 unit first generation iPad to teachers who worked in poor and dangerous schools. These iPads were recovered from consumers, and this program is a public project that announced by Apple when they released iPad 2. According to CNN reports, this 9000 unit iPads distributed in 38 states, Of course, for those low-income schools, only teachers have a iPad can't solve the problem, but this is a start anyhow, how exactly Apple and Teach for America program engage with each other? That is because Steve

Jobs' wife is the board member of the project.

So how is everything going in school where iPad has replaced traditional textbooks? News stories are popping up everywhere with the details on schools that have adopted the use of iPads in varying capacities in the classroom. An ongoing study conducted by Abilene Christian University is the latest to try to quantify the benefits of using these tablets to support their educational efforts.

Rounding the third year since their research began, the university has graduated to testing iPads from having previously used iPhone and iPod Touch devices to review the impact of digital mobility on education. The results of their research appear to be overwhelmingly positive. Students who took advantage of iPads to annotate their notes ended up scoring 25% higher on questions regarding information transfer than those who hadn't. Grad students that used the devices were noted as being 95% satisfied with their online coursework. The feeling among those using it seems to be that the iPad gave students the opportunity to have what they referred to as 'learning moments', by making better use of their time. But we all know there is something else that iPad can do, such as chatting, playing games, listening to music or watch videos, so who can guarantee that students are studying with iPad not playing something else, now that school is the one who provides iPad to students, there is no doubt that it should make some strategy to make sure students use iPad in a right way, make sure the tablets could be fully utilized, to make the tablets into something more than just a technological toy, which meant blocking YouTube and helping students to focus, rather than letting them talk about the
ipad
converter suite to enjoy free videos with ipad or how to
convert
dvd to ipad on mac or something else.

If we can avoid those adverse influences, then iPad can have a more significant meaning. The more good things iPad do for students, more teachers and students can become beneficiaries. And this is just the beginning. When we think about using tablets to supplement our educational experiences, I think most people jump to the idea of digital versions of textbooks. While I think that certainly is one of the first applications, more educational

resources will be made available for iPads and other tablet devices as time goes on. Consider being able to supplement lessons with digital video, review breaking news stories as they unfold, access studying aids like flashcards or supplemental quizzes. The opportunities really are endless in this realm.

Amazon Will Launch Its Tablet Kindle Fire Soon

It is said that Amazon will launch the long-awaited Android tablet on Wednesday. It is expected to become the biggest competitor of Apple iPad. TechCrunch reports that the tablet will be named "Kindle Fire". According to rumors, Kindle Fire looks like improved BlackBerry PlayBook. The Tablet will run Android software. However, Amazon will use their skin to provide a unique experience and make it different with other Android Tablet. It said Amazon will release it on Wednesday, but until Christmas shopping season in Nov, we can see it in the market, so many people think that Amazon launches its Kindle Fire before the Christmas shopping season on purpose to grab the limelight of iPhone5.

Because of the great temptation in Tablet market, Amazon, the largest Internet retailer in the world is coveted to pick up a little benefit from it too. Now Kindle Fire is about to release, however, some experts point out that with consumers becoming more rational, Tablet's boom is rapidly waning. They said the Tablet that is lack of useful features is not good enough compared to a smart phone, we can see that from other Tablets, whether Samsung or Motorola, or Acer, they all didn't get any benefits from Tablet market which is dominated by Apple iPad. Followed by these companies, the BlackBerry maker RIM has joined the ranks too, but the company's PlayBook Tablet only sold 20 hundred thousand units in three months. And HP TouchPad Tablet, which lunched this year was forced to give up because of poor achievement.

Some analysts believe that, because the Kindle has popularity in the market, moreover Amazon also provides movies and music service, so the company's Tablet is likely to pose a threat to Apple. But Apple iPad has been the lone cruiser among the tablet computers, we all know its gorgeous appearance and powerful functions, when we import

videos to ipad with high definition on that big screen, it feels so good, even though most videos can be played on iPad if we don't use

ipad video converter, but

it's worth for us to have a visual feast. Although criticized for various technological deficits, most notably the lack of flash support and true multi-tasking, Apple's iPad has set the standard for others to follow.

Amazon is expected to price its new tablet lower than Apple's iPad, particularly in light of the TouchPad's success during the \$99 fire sale after HP discontinued the product. Amazon isn't likely to dip that low in pricing, but the company could dip below the \$300 price point and find success, some analysts say.

Before the time that we don't sure when Amazon will release its Tablet, many reports about this product have made other manufacturers feel threatened. Digital products search engine Retrevo said in July, there are 55% Tablet PC buyers are willing to buy Amazon Tablet PC, higher than the nearest competitor. Now we will see it tomorrow, and we'll know its price and everything. Just a few days ago, iPad2 launched in China, but it gets a depressed reaction, everyone shocked, seems like iPad2 craze is fading.

If You Have Money Now, Buy iPhone4S or Wait For iPad3

According to media reports, Peter Misek, an analyst of Jefferies Securities wrote in a research report that he had received the reliable source about release time of iPad 3, he said this next-generation Tablet PC of Apple would be launched in late January 2012, which is earlier than expected. In addition to iPad3, Misek also claimed that iPad 2 HD is also in Apple's plan, and has produced close to 1 million units, but has been canceled due to unknown reasons now. As there is no related pictures about iPad2 HD, so when asked about the source, Misek did not give answers about that. But when talking about the biggest change about iPad3, Misek's expectation is almost same with the inside information that provided by the manufactures: quad-core chip, A6, 2048 x 1536 Retina Display.

We all know that iPad is the best-selling tablet in the world, iPad3 is the most expected device this year, but recently we are concerned about iPhone5, after the vacuum period of 15 months, Apple finally officially released iPhone4S. The press conference was host by the newly appointed CEO Tim Cook, and this is the first time that Apple launches significant product with Steve Jobs in

recent years, iPhone4S' release is the most exciting activity recently, now everyone is staring it and considering to buy one, iPad3 seems to have been forgotten, but watch out, there is also explosive news about iPad3 right now, jailbreakiphone4u.com released a photo of called iPad3 engineering prototype, it has a raise part in the left bottom in this photo, and it's very conspicuous, they didn't say what the bulge is.

About iPad3 and the iPhone5, we don't know much about them yet, most analysts believe that there is no chance that iPad3 will be released his year, most likely be next year, and iPad3 will be thinner and lighter than iPad2. In addition, iPad3 may use wireless charging technology, it can support to transmit data wirelessly, too. Apple keeps improving the property of iPad, so iPad3 must be better than iPad2, and iPad has been the lone cruiser among the tablet computers, we all know its gorgeous appearance and powerful functions, when we transfer

dvd to ipad with high definition on that big screen, it feels so good, even though most videos can be played on iPad if we don't use

dvd to ipad

converter, but it's worth for us to have a visual feast.

Although criticized for various technological deficits, most notably the lack of flash support and true multi-tasking, Apple's iPad has set the standard for others to follow.

Robert Scoble, a well-known blog author, he revealed a lot news about Apple on Google +, he said that Apple is developing a new iPad application, this application' R & D is led by Steve Jobs, it can directly compete with television program suppliers, and it will support a large number of contents. Apple built this 500,000 square foot data center is on purpose, the new data center can transmit large volume videos and data to the user's terminal. And the CEO of the famous video site Netflix will talk about the cooperation with Apple. However, but the release time of this application is uncertain yet.

Kindle Fire Is Not the Competitor of iPad

You may already know that Kindle Fire is priced \$199, which is pretty low, and for sure, it's the only advantage compared to iPad, while in other aspects, it can't compete with iPad at all. Even though the rumor like "iPad killers" has spread for a long time, and many analysts and consumers have high expectations on it. But until now, I guess many of us feel a little disappointed in the Kindle Fire product announcement, I mean for months now, this secret tablet was being championed as the "first real competitor for the iPad." Well, I guess it can be considered a competitor if you base that information solely on its outrageously low price, hello, \$199, of course it has more advantages than iPad, which we all know that some of us even can't afford it. So in my opinion, just like Amazon's e-reader, the Kindle Fire is not even in the same category as the iPad. Apparently, I am not the only one who thinks so. It has become clear that consumers in general would rather buy an iPad than any other tablet, no matter what kind of hardware it has, no matter how open sourced its software is. At first time, the price of TouchPad is lower than iPad, but just after a few months, TouchPad was dead, sorry for HP. Now Amazon takes a big risk to produce its tablet, what they need is to do not let itself disappear in a very short time just like TouchPad.

According to Sodahead, the web's largest opinion-based social community, a recent poll revealed that 61 percent of consumers believe that the iPad will maintain its lead over all other tablets on the market and only 39 percent believe the Kindle Fire will rise to the top and become the number one tablet, obviously, iPad has more approval rate. The truth is iPad has been the lone cruiser among the tablet computers, we all know its gorgeous appearance and powerful functions, even it has some flaws, like if we want to watch other format videos on iPad, we have to know how to view videos on iPad, and like DIVX, M2TS, VOB etc, these videos only can be played via iPad video converter, but iPad is still our first choice. Although criticized for various technological deficits, most notably the lack of flash support and true multi-tasking, Apple's iPad has set the standard for others to follow.

Sure, the Kindle Fire is significantly less expensive than the iPad, but it is also half the machine. Right now at Apple.com, you can get a refurbished iPad (first generation) for \$399. This specific iPad model has twice the memory, a larger screen and ten times as many apps for exactly twice the price. The Kindle Fire doesn't have a camera or a microphone, has less battery life and is subject to Amazon's policy of handing out your personal browsing information without your express permission. There is no 3G capability and no larger memory capability. Sodahead's poll just confirmed my personal opinion that Amazon's big unveiling was for a reduced version of an amazing tablet. There is no competition here. So is that obvious which one will be chosen by consumers? "iPad killer" will never show up, even the founder of Apple has left us, but we will never forget him, forever.

Fright Night: Colin Farrell Is A Vampire

Those boys and girls who are vampire fans that love "Twilight" series, you guys have another vampire movie to watch, which is "Fright Night", because a heavy weight who called the "Vampire Crazy" writer decided to pick up the pen again to write a script about vampires, and this man named Martino Eriksson, applause.....Let's see his outstanding works in the past time. From 1997 to 2002, he wrote the script of TV series "Buffy the Vampire Slayer," and now, after ten years later, he re-penned the script of a vampire movie. Vampires' image has a long history, but it has been changed beyond recognition in the "Twilight" series, so you guys want to know how Martino will portray the vampire in this remake version "Fright Night"? Let's take a look.

Senior Charlie Brewster (Anton Yelchin, god, I like his cute frizzle) finally has it all - hanging out with the popular crowd and dating the hottest girl in high school. In fact, he's so cool he's even dissing his best friend Ed (Christopher Mintz-Plasse).

But trouble arrives when an intriguing stranger Jerry (Colin Farrell), moves in next door. He seems like a great guy at first, but there's something not quite right-and everyone, including Charlie's mom (Toni Collette) doesn't notice. After witnessing some very unusual activity, Charlie comes to an unmistakable conclusion: Jerry is a vampire preying on his neighborhood. Unable to convince anyone that he's telling the truth, Charlie has to find a way to get rid of the monster himself in this revamp of the comedy-horror classic. Maybe it's too babyish for those real movies fans, but when you are on the bus or closetool, it's kind of time killer anyway, download a
ipad
video converter, figure out how to
copy
dvd to ipad, then enjoy the "exciting fighting" between human and vampires that you have never seen in "Twilight".

Be honest, I was very impressed by this movie. Much as I loved the 1985 original, in this new version, I felt that its effects were lacking and its clever ideas weren't executed as well as they could have been. Both those problems have been remedied here, and all the strengths of the original are also preserved. Everyone is terrific, Ferrell and Tennant standing out especially. Colin Ferrell is mesmerizing as the sexy, menacing and supremely confident vampire, which is very refreshing. And this movie is a jab against the new wave to harmless-and-charming-vampire movies, he viciously rips someone apart and then tries to turn the charm back on, fabulous. Also, David Tennant is a much more interesting character than the original Peter Vincent, he is a showman and borderline-charlatan who surprises everyone, including himself with his expertise in the paranormal. Oh, right, and the hero, why the director arranged so little interaction about the relationship between Charley and his erstwhile best friends Eddie, I mean, they were best friends, you know what I mean. Maybe the story is not that creative, but what you can't ignore is the protagonists. Farrell is all darting eyes, facial ticks and macho confidence. He never goes over the top, he's not a showy actor, but he's clearly relishing his role and eating it up with abandon. He makes this a Night to remember.

Tie Your Seat Belt, Let Us Drive With Ryan Gosling

Movie "Drive" is directed by Nicolas Winding Refn, a Danish director, Nicolas Winding Refn keep his preference of aesthetics of violence, there is just a few violent scenes in "Drive", but definitely can surprise audience, seriously, those scenes are very cool. We can see Nicolas's preference to aesthetic of violence, weather his first English film "Bronson", or his famous works "Pusher" series or "Valhalla Rising." After he came to Hollywood, he didn't become timid, but more at ease.

A long time ago, as a young filmmaker besotted with the hard-boiled pleasures of classic Hollywood, Jean-Luc Godard claimed that all anyone needed to make a film was a girl and a gun. But in his new movie, "Drive," Nicolas Winding Refn, in thrall to a later Hollywood tradition, tests out a slightly different formula. In this case all you need is a guy and a car. "Drive" has a low investment compared to other Hollywood movies, but it's definitely a better movie, when lying in the couch or bed, watching "Drive" is a perfect enjoyment, just download a dvd to ipad ripper or figure out how to transfer dvd to ipad from PC, then experience the exciting driving in "Drive"- Ryan Gosling and a late-model silver Chevy Impala, the most popular car in Los Angeles. Ryan Gosling - his character has no known proper name, and is variously referred to as "the driver," "the kid" and "him" - and to watch him steer through Los Angeles at night is to watch a virtuoso at work. Behind the wheel of a getaway car after an uninteresting, irrelevant and almost botched robbery, the driver glides past obstacles and shakes off pursuers, slowing down as often as he accelerates and maintaining a steady pulse rate even as the soundtrack winds up the tension to heart attack levels.

In daytime, he is a car stunt actor in Hollywood, but at night, he helps criminal run away from crime scene. Carey Mulligan plays a woman whose husband had been to jail, and she is Ryan's neighbor, Ryan has a crush on her, so he helps her husband rob pawnshops, but what he doesn't know he is involved in a gang conspiracy. The most

unforgettable scene to me is in the backstage in a strip club, Ryan standing there, among a bunch of naked strippers, making a phone call to his opponent, and the camera shots showed those bodies calmly, with no shy, combined with cool silent Ryan, you can see the perfect blend of eroticism and literature. I think only Ryan can express that feeling, he is not the traditional handsome man, but he has his characteristic that other Hollywood actors don't have. He has a baby face, but when he acts a violent man like in "Drive", you won't feel strange or weird, and this year is a terrific year for Ryan Gosling. From "Crazy Stupid Love" to "Drive" and now "Ides of March", Sandra Bullock's one-time toyboy seems to have emerged as the most employable actor in Hollywood. Well deserved status too, what with how good he is in each film.

Cook Said Apple Can Not Be Imitated

According to media reports, Cook, the new CEO of Apple said, no matter who wants to imitate apple, they can't success. Apple is everywhere, he said so in the "Let's Talk iPhone" conference that held in Apple headquarters in California, he claimed that iPad is the incontrovertible number one Tablet, for now, everyone wants to imitate it, but all failed or haven't get the great influence as iPad do, like HP, RIM, Samsung, Amazon or the coming Window8.

A few months ago, HP TouchPad officially listed in the U.S., as the number one in PC industry, non-Apple camp had high expectations on the TouchPad, hoping it can shake the monopoly of iPad.

TouchPad16GB priced \$ 499.99 in the U.S. and 32GB priced \$ 599.99.

However, the response was not satisfactory, and HP had poor sales.

Less than a month, TouchPad announced lower \$ 100. But even so, it did not attract consumers' desire to buy it. August 19th, the

TouchPad 16GB priced \$ 99 and 32GB down to \$ 149, this fire-sale,

and finally led to frenzied purchase craze, all the stock in

varieties of markets were sold out in a very very short time, some

retailer's Web site almost crashed due to high demand. Only in

(Best Buy), there was 25 million to 27 million new stock, almost

all sold out in less than a week, I bet even Apple don't have this

unbelievable achievement, huh huh.

And you may remember those clashes between Samsung and Apple. After defeated by Apple in Netherlands about the patent, Samsung once again announced they wouldn't sell Galaxy Tab 10.1 in Australia before September 30. Even Samsung promised they would send the samples to Apple before launching it, and then did as promised, but Apple's lawyers insisted Galaxy Tab 10.1 infringed their patent. The day before yesterday, Apple announced that it has rejected the suggest that offered by Samsung about solving the Tablet disputes peacefully, so we all can see who is the boss. Because of the great temptation in Tablet market, Amazon, the largest Internet retailer in the world was coveted to pick up a little benefit from it too. But if something only sold \$199, what qualification does it have to be called a competitor of something sold \$499, but the low price is still an advantage anyway. According to Amazon's latest sales data, since Kindle Fire was released from Sep.28, the pre-sale orders have exceeded more than 250,000 units in the first five days. The market research firm eDataSource said, the order in the first day is 9.50,000 units. But, the first generation of iPad has 300,000 orders in its first day, and iPad2 keep this unbelievable myth, people love it, even even it has some flaws, we only can watch other format videos(except MP4) with the help of
ipad
converter suite or
ipad
video converter, but iPad is still our first choice, look the huge difference of those data, we know who is the boss.

According to BCG, compared to iPad, people are more looking forward to Windows Tablet, maybe it just because most people are very familiar to Windows Cooperation System, but lacking of the practical concepts about Windows Tablet, so when it finally show itself to people, the enthusiasm will disappear, and iPad will be continue to dominate the Tablet market.

Are You Considering to Buy Sony Tablet S

After lots of rumors about Sony Tablet S, finally, it is launched. Compared to Amazon Kindle Fire's low price, it has a better market value, which means it's not that cheap, almost expensive as iPad, so I guess many people have faced a hard choice, which one should I have, Tablet S or iPad2? Well then, let's see the special characteristics of Sony Tablet.

Some said if a tablet's appearance doesn't like iPad, then it's not a Tablet, that's funny, whoever said that, he must be a crazy iPad fan. But there is always someone dare to make changes, yes, I am talking about Sony, shaped like a folded over magazine, Sony's Tablet S is maybe the weirdest looking tablet we've ever seen, but we have to admit that it's the most comfortable tablet we've ever seen. While it looks like the work of a crazy person, the design is deliberate. Sony thinks the wedge-shaped build will make the Tablet S more comfortable to hold in one hand, as well as making it sit more naturally on flat surfaces.

Compared to iPad2, Sony S is very thin and light, even equipped with two 5.5-inch touch screen, overall weight is till 0.82 pounds (367g), just has half weight of Sony Tablet S (S1) and iPad2.

Alternatively they can operate independently, for example, playing video or games on one while showing control buttons or a keyboard on the other. Like other tablets it can surf the web, check email, download music and videos. More significantly, it can also be used in line with Sony's PlayStation gaming technology and its popular eReader digital book downloads, but just like iPad, we still need to have the aid of blu-ray ripper to watch blu ray videos on Sony Tablet, so that's a similarity between Sony and iPad anyway, huh, just kidding. Besides, Howard Stringer, Sony CEO said that Sony P can provide music and movies via built-in "entertainment library", which is a big advantage compared to other competitors. He said: "Apple made iPad, but it can make the film? We want to prove that it's not who makes it first that counts, but who makes it better," he said at the IFA conference.

Holding the Tablet S, you will impressed by how light it felt.

At 598g for the Wi-Fi version, it's ever so slightly less heavy than the Wi-Fi iPad 2, which tips the scales at 601g. We suspect

you could lug this tablet around all day, and not have to worry unduly about your bones collapsing under the strain. And look between the black bars of the bezel and you'll be greeted with a 1,280 x 800 display that Sony says uses the company's TruBlack technology - already a staple in its Bravia televisions, so imagine how wonderful it will be to

rip

blu-ray to mp4 and enjoy the HD movies on this high quality display.

It seems like after being launching into the market, this Tablet has a nice respond, but to us consumers who have experienced HP's i1499 Tablet and Amazon's low price Kindle Fire, is really that easy for Tablet S to attract us? I'm not sure, but once it comes down in price, that's another thing, huh huh.

New Rumors About iPad3

Maybe you think you can have a rest after the crazy craze to iPhone4S, then you are wrong, because a bunch of rumors about iPad3 are back, a long time ago, some unknown mysterious apple employee who wasn't identified said that "ipad2 was a bit of a rush job and the third generation ipad is the one to make a song and dance about." But recently, it seems like we all focused on iPhone4S and left iPad3 behind us a little bit, so to get your attention, the rumor mill is back.

Let's see what's the word on the street about iPad3?

1. iPad 3 will support 4G?

Mobile devices of Apple that is 4G is very slow, most likely because the battery life matters. But the battery life of ipad is still incredible long, so the third generation version has the opportunity to support 4G, for now is Verizon and AT & T's LTE network. (To iPad3 has been released, Verizon and AT & T's LTE network should have been completed and put into market.)

2. 7-inch?

Jobs (he was a great man) said that he did not believe the 7-inch Tablet PC will be successful. But there are so many 7-inch computers Android have made a good example, some analysts seem like don't agree with Steve Jobs. I guess this rumor will never become a reality, due to the momentum of iPad, 7-inch Android PC virtually has no threat to them, and imagine how wonderful it is to watch videos on that high quality screen, but considered that Apple productions can't play other format videos on iPad, so to watch videos on them, mac dvd ripper is what we need.

3. iPad3 will use A6-the faster processor.

iPad3 will use more advanced and faster processor, this speculation makes some sense. Currently iPad2 is using A5 dual-core processor, but Android tablet which use quad-core processors is in preparation stage. Apple's next-generation A6 processor will catch up with Android or ever better? About that, the possibility is much bigger.

And as reported by AllThingsD, production has begun. Susquehanna financial analyst Jeff Fidacaro told AllThingsD that, after a supply chain check, it looks like Apple is increasing its fourth-quarter iPad builds by as much as one million units. The increase is speculated to be caused by an early iPad 3 production run. According to Fidacaro, "Since our last month supply chain checks we are now seeing 600,000 to one million iPad 3 builds showing up on the plan for the fourth quarter of calendar 2011. Our previous estimate did not include any iPad 3s." Fidacaro also told AllThingsD that he believes Apple shipped 11.5 million iPads in the third quarter and will likely ship 13 million in the fourth.

iPad2 is not perfect, either are other Apple productions, if we want to watch DVD on them, we need the help of some gadget like video

converter ultimate, that's why we have expectation on the next generations, but it's pretty sure that iPhone5 wouldn't be released in a long time, obviously iPhone4S has replaced it, so some one guess will Apple play the same stunt with us that they will release iPad2.5 instead of iPad3? Funny guess.

How Does the world commemorate Steve Jobs

Although that day that let all Apple fans feeling sad have been past nearly ten days, but those activities to commemorate Steve Jobs still not end. Different countries, different trades, friends or competitors, all of them are or will commemorate this great man who has changed the world in different way.

October 19th is the date that Apple will be hosting an on campus remembrance ceremony to celebrate the life of former COO Steve Jobs. Retail employees may be able to join in on the special tribute to Steve Jobs, and Apple Stores will be shut down at 10 a.m. PST or 1 p.m. EST, and will reopen at 11 a.m. PST and 2 p.m. EST. During the hour long closure, Apple employees will watch a live webcast of the memorial in Cupertino. The ceremony is not open to the public, but citizens of California can celebrate and remember Steve Jobs on the date of October 16th, which has been named Steve Jobs Day. And of course, everyone can join in for a moment of silence during the remembrance, to honor the man who has changed all of our lives, most of us are using Apple productions or related productions of Apple, iPad, iPhone, iPod, Mac or dvd copy mac, etc, maybe some one will say "I'm not an Apple fan", that's reasonable, but to me, I think Steve Jobs deserves all our respect, even the whole world's respect.

It is said that Lee Jae Yong, the CEO of Samsung plans to join the remembrance ceremony of the birth of Steve Jobs in America, he has received Cook's invitation, and this ceremony only allows those people who is invited to join in. So many people speculate that maybe there is another meeting will be held at that day, which is Apple and Samsung may end the intense legal disputes that have over six months.

Except Apple inc, many TV media also have ceremony to present in different way. As previous news, "Discovery Channel" will broadcast a lasted one-hour special program, in order to commemorate the passing of the co-founder and former CEO Steve Jobs of Apple. The program's name has been decided to be "iGenius: How Steve Jobs Changed the World". This documentary will be host by Adam Savage who is famous for MythBusters and co-chaired with Jamie Hyneman, they will visit those former CEOs of Apple as well as some

prominent figure in the history of Apple personally, and narrate to us how Steve Jobs influence the science and technology circle even the world step by step is with his spirit of innovation.

This is what Savage said about Steve Jobs: He is an exceptional man, he will not blindly meet the required products for the general public. He defined the standpoint of modern digital life with new thought: productivity, creativity, music, communications, media and the arts, he affected all of our lives directly or indirectly

iGenius: How Steve Jobs Changed the World will be premiered at 8 pm in local time, and 210 countries and regions will broadcast it simultaneously.

And those manufactures that produce related productions of Apple, what will happen to their productions like copy

dvd mac or something like that if there is no Apple, so you see, Apple's influence is worldwide, and that's because what Jobs has done, so he deserves everything.

Do You Know How funny Answers Siri Can Give You

Have you bought iPhone4S? If you haven't, then you won't know how funny Siri is. It's a multi-tasking built-in application developed for the iPhone 4S, has garnered all our attention since the phone's release. It's easy to use, you ask, she answers, you may say why so many people think it's funny, because the answers, you have no idea what answers she will give you.

And where do these answers come from, actually they are all planed by Apple engineers, did Steve Jobs ask them to put these words in Siri's mouth? Those people who have experienced this magical function of Siri said Siri was the iPhone4S' most exciting new feature. Here we go, Q: I really love you. Siri: I hope you haven't said this to the other cell phone. After the release of iPhone4S, we actually don't care other functions of their cell phone, because Siri is the only one that attracts us, the voice-assisted service of iPhone4S. Just ten days, the world sets off a wave of spoof. Asking philosophical questions to Siri, proposing to Siri, or let two iPhone4S ask each other each then

answer each other.

The application allows users to employ voice control to schedule appointments, search the internet and more, according to Apple Inc. It has shown that, along with a fair amount of accuracy, it has a sense of humor, as well. Some one proposes to Siri for three times, and the first time Siri says: It sounds very sweet, but what else can I help you? The second time, Siri says: Let's just be friends, okay? And the last time, she answered: My user agreement doesn't include marrying you, I'm sorry, so that's the right answer. Of course, if you ask a serious question, like "Siri, how can I watch Blu-ray on my Apple", she probably will answer you like "blu-ray ripper can help you". But it seems like most of us rather to have fun with Siri.

Siri was repeatedly asked a series of philosophical questions, like who are you? Seriously, who the hell are you? What is the meaning of life? And the funny thing is Siri won't give the same answer, "I am your assistant ... does not matter who I am ... I can not answer you what's the meaning of life, give me some time ..." There are more interesting things. If you put two iPhone4S together, let them ask and answer each other, in the end, the system almost collapse.

Why is Siri so powerful? Some one said in the internet that actually Apple built a huge call center in Hyderabad, India, all the questions that asked by users are sent here, then those staffs type quickly to reply. This is the so-called India Cloud, and it has another name "iCloud", if those workers feel tired, they just need to drink Red Bull and will be full of energies. Do not take it serious, this is a spoof, too. Siri is a more powerful artificial intelligence system, but Siri can't give you an optional or funny answer, if you ask her a little complex issue, it would collapse.

Now you know why is Siri so popular, if you have iPhone4S, try to ask her some funny thing, see what answer she will give you, Q: Siri, I want to watch blu-ray on you, I mean, this cell phone", Sir: Go get blu-ray to iphone, I mean me, huh, huh.

Do You Know How to Watch YouTube on Your iPhone4S

iPhone4S was released just a few days ago, probably many of us will replace our cell phones with an iPhone4S, cos you know, we are all crazy about Siri, those people who havent bought iPhone4S may feel desperate for one just because this funny assistant. But, this is not what I want to talk about today, here is my point, we all know that iPhone now lets you watch YouTube videos through Wi-Fi networks. But the video quality of wi-fi gets us confused sometimes when the picture gets blurry and takes longer to load. Thus, we need to find another solution to download YouTube to iPhone4S or other Apple devices.

First, we need a downloader, for example, youtube download (obviously, its a tool to convert YouTube videos). Then, we can begin to set up.

Step 1. Install youtube download and click the download bottom to download the videos you need in YouTube.

Step 2. Select iPhone in output format list
Click Profile and choose iPhone Video (*.mp4).

Step 3. After choosing the format, you just need to click Convert button to start the task.

When the conversion is done you can upload the output videos to your iPhone4S, or the previous generations, like iPhone3GS, iPhone3G or iPad etc. After a cup of tea, you will be able to enjoy your YouTube videos on your iPhone. So easy, isnt it?

Of course, there are a bunch of gadgets out there can help us download YouTube videos so that we can enjoy them anytime anywhere, like youtube downloader. Maybe you all know that YouTube is awesome, but do you know the details that can prove its success?

As the current most successful, have the most powerful strength and the most influential online video provider, YouTubes system have to deal with tens of millions of video clips every day, providing a high level of video transmission, distribution, display and browsing services for thousands of users worldwide. According to market research, as early as February 2007, the amount of YouTube has surpassed the number of visitors of Googles video site, to the end of July, YouTube the number of visitors of YouTube increased to 30.5 million per month, and GoogleVideo only have 9.3 million, while Yahoo Video is 5.3 million. With simple interface, it allows any video uploaded to the network can be viewed by audience the whole world within a few minutes, which made Internet users who only receive information become publishers of information.

Each person can create their own news channel or uploading family movies. At the same time, more and more people enjoy the online video. Most of the YouTube uploader is individual to upload their own videos,

but there are a number of media companies such as CBS, BBC, VEVO and other groups have symbiosis with YouTube, they upload their own films recorded by the company.

So now you know why is YouTube so popular, not just we can watch or upload or download videos on it, the more important is it provides a wide platform for those people who like filming to realize their dreams.

Windows 8 Tablet, Are You Ready to Challenge the Current Situation

Undoubtedly, Apple IOS system and Google's Android system are the leaders in Tablet market now the market leader in Tablet market, and the advent of Win8 definitely is the bright light in the Tablet contest. We have to admit that if the operation system has no highly competitiveness, no matter how beautiful shell it has, it won't win much praise, so-called Tablet PC battle, in fact, is the operating system wars.

According to Microsoft, most ignored Windows 8 design will have a comprehensive description in the blog recently, David Washington who is from Microsoft wrote on the MSDN blog, "We spent a lot of time to study the habits and positions of people using Tablet, such as in usability labs, and in their own houses, because there are so many Tablet users. Microsoft developers are studying the based interaction between a variety of system applications and the user's body posture, movement. "The number of combinations is staggering, the posture, grip and directions are changed frequently,"

Washington said. "Simply put, there is no specific way to hold their Tablet, people just naturally seek to find a comfortable position and orientation.

According to Taiwan media, industry sources that including Hewlett-Packard, Dell and other PC makers are ready to take a chance to develop Microsoft Windows8 Tablet, and probably new products will be released in the third quarter of 2012. In this regard, two companies have confirmed this news. They said that Amazon releasing Kindle Fire in low-cost not only just led a price war between those manufacturers of Android tablet, also it forces manufacturers to turn to other platforms, in order to avoid drastic competition. They said that Motorola have begun to release low-cost version XOOM Tablet in Best Buy on October 16, Hewlett-Packard and Dell confirmed that they will release Windows8 Tablet in the third quarter of next year, because the Android market competition is too intense. From the perspective of

e-reader function, Windows8 system is clearly better than Android, on the official application, it also will not less than Android.

Perhaps just because win8, Android feels threatened so they have to upgrade, but no matter how is the war going, for consumers, the product will be getting better and better, and the price will be more cheaper. Meet the individual needs of users, is the key for Tablet to success. No matter what great achievement you have gained before, you still need to follow the trend, because every minute, you may have more competitors, I believe that this is the embarrassing situation that Microsoft now faces, however, the time that there is only Microsoft system has gone, and now, the truth is IOS have obvious advantages, we can see that from the popularity of iPad, iPod, iPhone, Mac or related gadgets like mac dvd ripper or mac the ripper download, so if Win8 or Android want to compete with IOS, they have to make more efforts.

Harold & Kumar: the Funniest Adventure You Have Ever Seen

There are a bunch of new movies releasing now, if you have paid your attention to Hollywood, then you'll know you can see your favorite stars in the screen like Nicolas Cage, Huge Jackman, etc. And if you would like to watch comedies, then Harold & Kumar 3 is for you, and of course, the DVD version will come out first, so if you want to watch it on your PC or mobile devices like iPad, iPhone, at that time, you will need a dvd ripper, so that you don't have to wait other people uploading the movie to the Internet.

As you see, that comedy is a series, to me, I think the upcoming Harold & Kumar 3 is much better and more funny the previous ones, but if you haven't watched the first and second one, then it's your loss, but here I'll tell or remind you what is the movie about. John Cho is a grassroots staff in an investment bank, toilsome work and low salary, his colleagues often ask him to do

those work that doesn't belong to him, that makes he can't have a good rest in weekend, meanwhile, he has a crush on this neighbour named Maria who is a very beautiful girl, but Harold is a shy young man, so he doesn't have the courage to tell her that he loves her.

Kama, Harold's friend, comes from a medical family, his father and brother are doctors, no doubt, he is supposed to be a doctor, too, but he is a downright "optimist", he likes to use all the indulgence of pleasure to escape the pressure from reality.

Although his family wants him to follow the steps of ancestors, go into a decent medical School and eventually become a doctor, but he is more like a party guy to enjoy a wide variety of youth.

Surprisingly, these two people who have completely different personalities actually are best friends, and the first story "Harold and Kumar Go to White Castle" begins. On Friday night, they are watching bring TV show in their small apartment, don't know what to do, then, they are completely attracted by the recommended products in TV, which is the White Castle, it is a fast food chain selling mouth-watering hamburgers. In that moment, they feel like they find the goal of their lives, (at least the goal this weekend night), so they get in their car immediately, proceed through almost the entire New Jersey, look for the "White Castle" chain, to make up the regret in their lives with a hamburger, and of course, to make themselves full, because they are starving, then their journey is beginning, in their whole trip, they have met lots of amazing and fantastic things, and one more thing, Neil Patrick Harris plays himself in the movie, and he has a marvelous performance in that movie, and he is the most famous actor compared to two hero's players.

And Harold & Kumar 2 is more unbelievable, they are ready going to Amsterdam to see Maria, she is the girl that Harold fancies a lot, remember? But they are accused as terrorists and sent to Guantanamo prison, and the story is about how they escape from the prison and from those cops who keep chasing them.

So have you attracted by the stories? We will enjoy their funny adventure in Harold & Kumar 3, and it will be released very soon, I can't wait to copy it to my PC to LOL with dvd copy.

Is Apple Threatened by Other Competitors

Data shows that market share of Android Tablet have grown by 700% in the past year, while iPad's market share has fallen to 67%. However, if analysing the data further, we can find the iPad's leading position has not been changed. Nowadays, the Tablet market has a rat race, which is inevitable. Apple's market share will gradually decline. However, it's meaningless to compare the sales of a quarter of iPad with how much Tablet has been produced by other manufactures in a quarter.

So it's the truth that Apple still dominates the whole market.

But Apple is not always so lucky, let's recall the time when Steve releasing the iPad, it was indeed a challenge to release iPad, even for Steve Jobs. After releasing the iPad, media had a lukewarm reaction, and some even laughed at Apple, and Jobs only received 800 messages from the users, which made Steve Jobs, the CEO of Apple at that time feel deeply "disturbed" and "depressed." At the night after the release of iPad, Steve Jobs said to Isaacson:

"Today I feel a litter depressed, it (the media's response) made me feel a little bit surprised." Of course, iPad has survived tenaciously, and compared to other Tablets, it has a higher popularity and the wider market prospect. Not just iPad, the other productions of Apple also become a part of our lives, like iPod, it's not only just a music player with a huge music library, with dvd to ipod review, we also can watch videos on it, so it's obvious that why Apple things are so popular among us.

Even though there are many so-called competitors now, but it seems like most of us prefer to study Apple, even those hackers. As soon as Siri has been known to the whole world, those jailbreak developers began to study it, they have ported Siri to iPhone 4, which is the fastest progress by now, and now they want to transplant it to iPad, the first generation, even though Siri becomes a vegetative state after being transplanted to other

devices, which means it can't speak as it does in iPhone 4S, but they will not stop to transplant it, jailbreak developer @jackoplane, who has ported Siri to iPad2 claimed that he has transplanted Siri to the first generation iPad successfully. No doubt, Siri can't be connected to servers of Apple when it is transplanted to iPad, but a developer called @stroughtonsmith said that any iOS devices can be disguised as iPhone 4S cleverly, then can be connected with the Apple servers.

The pass hasn't over, but the coming is near, according to AppleInsider, iPad 3 will be launched in March, 2012, about one year after the release of iPad 2. The report also said the new iPad has the same size with iPad 2, but it is not clear whether it will have a higher screen resolution. No matter it is true or just rumors, what we are sure is the world still wants more Apple stuff, like iPod, even Apple is planning to reduce the product lines of iPod classic, but the quantity demand of iPod or related gadgets of iPod like ipod video converter can't not be ignored, so no matter iPad, iPhone, iPod or Mac, as long as it belongs to Apple, people want it.

Screenwriter of "The Social Network" Will Write the Screenplay of Jobs Biography?

According to the "Los Angeles Times" reported that the source has revealed that Sony Pictures has a plan to employ Aaron Sorkin who is the writer of movie Social Network to write the screenplay of "Steve Jobs Biography". "Steve Jobs Biography" is written by Walter Isaacson who is a biographer of America. Steve Jobs, the co-founder of Apple had been co-operation with Isaacson when he was alive, provided exclusive material of his personal life to Isaacson, so the book written by Isaacson is seen as the only biography that authorized by Steve Jobs himself. "Steve Jobs Biography" has been released globally on October 24.

It's said that Sony Pictures has spent about \$ 1 million to buy the film adaption rights of "Steve Jobs Biography" from Isaacson. "The Social Network" that based on Mark Zuckerberg who is the founder of Facebook also produced by Sony Pictures, and the writer of screenplay is Sorkin, "Social network" has won many awards (American Film Institute Award) in Oscar of 2011, and Sorkin won the award of the best adapted screenplay. There are lots of famous and successful screenplays adapted by Sorkin like Moneyball, acted by Brat Pitt, and it's on the screen right now, very touching motivational movie, and Charlie Wilson's War, they are all great movies, if you want to watch them on you mobile devices like iPad, iPod or iPhone, you can copy the DVD version with dvd copy mac, then it's no problem to enjoy them anytime anywhere.

Informed sources said, despite Sony Pictures has the intention to invite Sorkin to write the screenplay of "Steve Jobs Biography", but Sorkin hasn't decided whether to accept. About this, Sony Pictures and Sorkin's agent all refuse to respond. It is reported that Sony Pictures has appointed Mark Gordon who is a famous producer in America as the producer of "Steve Jobs Biography". Gordon has served as the producer of "Saving Private Ryan", which is a great and classic film, I bet most of us have watched it already, but it's worthy to watch again, so if you want to recall it, you can copy the DVD on your PC, but how do you copy a dvd in windows 7? Actually that's pretty easy to do, after all done, then you can enjoy those classic movies that made by excellent talents.

Sorkin is good at describing the life experience of protagonist who has complex character in the script, no doubt, Steve Jobs is the one who owns very complicated characteristic. But Sorkin, after all, just finished his duty as screenwriter in "The Social Network" team, perhaps he didn't want to write the script that associated with the technology any more, or at least in a short time. On the other hand, Sorkin is not familiar with Steve Jobs, so if he accepts the offer, the biography is the only material that he can used to understand the character of Steve Jobs, and this is a great challenge to any writer, no matter how excellent he is.

Interestingly, Steve Jobs had invited Sorkin to write a screenplay for Pixar. But Sorkin declined Jobs, said he could let

animated characters to "speak." Now Jobs has died, perhaps Sorkin would be willing to serve as the writer of "Steve Jobs Biography", to make up the regret that he declined him once when he was alive.

Halloween is Coming, Do You Dare to Watch Do Not Be Afraid of the Dark?

Guys, it's Halloween, so what's your plan, except dressing weird costumes to scare other people or go to Halloween party? How about watching horrible movies with friends and screaming or laughing (sorry, some horrible movies just like comedies to me) together? It's also pretty "Halloween", so if you want to do that, do you have any idea that what horrible movies are horrific enough? Maybe you should try "Don't be afraid of the dark", turn off the lights sitting on the couch, enjoy the creepy film or copy it to your portable devices with best video converter, anyway, enjoy the ghastrful time as you wish.

Except the horrible part, Guy Pearce and Katie Holmes, they may be the important factors that attract more fans to watch this movie. Come on, who is Katie's husband? Tom Cruise, so we buy it. Anyway, the most important part we concern is still the story, so here is storyline. Introverted Sally Hurst (Bailee Madison) has just moved in with her father Alex (Guy Pearce) and his girlfriend Kim (Katie Holmes) when she realizes that their sprawling estate holds its fair share of secrets. Ascending to the depths of the house, Sally gains access to a secret lower level that has lain undisturbed for nearly a century, when the original builder vanished without a trace. When Sally accidentally opens the gateway that kept the creatures locked up tight, she realizes that in order to prevent them from destroying her family is to convince her skeptical father that monsters really exist. Confronted with the horror that now threatens to take her life and destroy her family, Sally desperately tries to warn the whole house, but there's just one problem: no one believes her.

Gloomy, sinister, shot through with a pervasive sense of unease and swathed in oppressive darkness, Don't Be Afraid Of The Dark is

perfectly poised horror that revels in its gloomy atmospherics. Co-written by Guillermo Del Toro and Matthew Robbins, it has echoes of Pan's Labyrinth in both its unsettling tone and earthy colour palette. Like del Toro's 2006 film, the story revolves around a troubled girl who, unable to connect with her surroundings, seeks solace in fantastical companions. Unfortunately, this is also where Don't... loses some of its bite. Once the evil basement-dwellers are revealed (at around the halfway point) the scares dry up, and the bleeding of the fantasy aspects into real-world settings jars a little. But this isn't enough to spoil Troy Nixey's artfully shot and thoroughly entertaining directorial debut, a film that'll give you second thoughts about relocating to that country pile. Although it's a little stereotyped, but it's still a time killer to watch on your portable devices after converting it with mac video converter when you feel bored.

And here is another story about Tom Cruise and Katie Holmes. Tom Cruise was so scared after watching wife Katie Holmes in her latest movie, the horror thriller Don't Be Afraid Of The Dark, that he had to watch another, less frightening film before he could go to sleep. "I'm not sure what he watched," laughs Katie, who screened her new project for him at their home in Los Angeles. "Maybe The Sound Of Music!" Actually, I don't think Tom Cruise is so yellow-bellied, probably it's just a method to propagandize this film.

More TV Shows Are Free on iPad Now

We can watch more free TV shows on our iPad now, don't you think? Compared to buy movies or videos on iPad, we prefer to enjoy free things, right? So as we wish, more applications are released on iPad or iPhone, and they are free.

Following NBC's footsteps, Turner Broadcasting System just released the TNT iPad app, which gives you complete access to full-length television shows and movies aired by the network. The new app provides you with a lineup of TNT Dramas that you can

access wherever and whenever you want. Appreciate that, but the truth is we can't watch programs of every channel, after all, just NBC and TNT have do something, so if we want to watch all dramas or movies on iPad for free, we have to figure out another way, just like another production of Apple, Mac, if we want to watch dvd or blu-ray videos on Mac, we have to do that with the help of dvd copy mac,

anyway,that's another thing. So let's just hope that more channels can sacrifice their show to iPad, and now TNT's iPad app gives you complete access to behind-the-scenes videos, program guides and also schedule reminders. It also integrates with GetGlue, Facebook and Twitter allowing you to share with friends all kinds of updates. As an authorized user, you can watch clips and full episodes of The Closer, Falling Skies, Rizzoli & Isles and more. But the key word here is "authorized user". That's right, in order to use this app you must have a subscription with a TV provider to get full access to video content. Perhaps one day, all content owners will start providing online access to their video libraries without requiring a paid TV subscription.

And Bloomberg announced Thursday that its 24-hour live global business and financial news broadcast would be made available for free to all iPad users, via the new Bloomberg TV+ app. The free-for-everyone strategy sets Bloomberg apart from competitors like CNN and ESPN, who only allow select subscribers to watch live feeds. The app allows viewers to watch in both landscape and portrait mode. An interactive, customizable scrolling ticker displays stock information and news relevant to what's currently playing. While live television plays 24-hours a day, the app also allows users to check out featured videos of the biggest business stories and important videos from the last 24 hours. Videos can be downloaded for offline viewing, and the app also provides extra content on people, companies, and topics while watching. Bloomberg TV+ features Bloomberg's full library of on-demand shows, including Bloomberg West, Charlie Rose, Tech Stars, Innovators, and more.

Like I said, it's more convenient for us to enjoy TV shows on iPad as more apps being released, also, we can copy

dvd movie to our mobile devices, iPad, iPhone etc, so we can do more things with our iDevices as time goes.

A New Take of 1984 Classic Film "Footloose"??

Footloose is the remark of 1984 version, the same dance movie, but you can see the difference between 1984 and 2011 in lots of aspects. Kenny Wormald is a member of Justin Timberlake's dancing team, and he can play the protagonist due to Justin's recommend some way.

The famous central hook of Footloose - that small town Bomont (Utah then, Georgia now) has outlawed dancing - sounds hokey, and, frankly, it is. The movie even comes up with a vaguely realistic version of a dance ban - five local teenagers died in a car accident after an alcohol-fueled dance party, leading to a legal crackdown on unauthorized teenage gatherings - before tacking on a formal anti-dancing law, too, perhaps out of deference to the original film. Despite the inherent silliness, though, this opposition is more or less the same encountered in any teenage dance movie, almost all of which feature at least a few adults adamantly opposed to the controversial idea of teenagers engaged in wanton acts of choreography and skill; Footloose just puts it on the books and makes it official.

The dance ban is challenged by Ren (Kenny Wormald), a Boston kid and former gymnast who moves to Bomont to live with his aunt and uncle after his mom passes away. Much like in the original, his first friend is a wiseass meta-redneck, Willard (Miles Teller); soon enough, he has his eye on Ariel (Julianne Hough), the daughter of the very same Reverend Moore (Dennis Quaid) who lost his son in the car accident and spearheaded the anti-dancing movement. The kids bond and sneak a few dances away from watchful adult eyes.

Yet this is a pretty good remake of Footloose: good-hearted, sincere, enjoyable, not too stupid. If it's not Brewer's most indelible portrait of the South, maybe it's not such a bad way to bring him back into the studio-filmmaking fold. He has an eye for detail and atmosphere not fully utilized by an eighties remake, even one that's better than necessary; if he serves his remake time, maybe he'll eventually get to do a real musical. If you want to watch this movie in your mobile device with your friends, you can convert it to your devices with video converter.

Since 2006 "High School Musical" has been released for the first time, the series became Disney's representatives, especially for those boys and girls, which also make the other film companies very envied, Last fall, Paramount announced to remake a classic musical movie of 80's, which is "Footloose" and invited Kenny Ortega (who directs "High School Musical") to direct it and Zac Efron to play the protagonist, but Zac doesn't want to be stereotyped, so he refused, fortunately, Chace Crawford, who is one of the famous star in drama in "Gossip Girl" agreed to join the film, then the preparatory work could be carried out smoothly, but no one see Chace Crawford in the film, so I guess something has happened, and Craig Brewer refused to directed the film twice.

I gotta say this film has been through a tough time. Although it has not very high investment, still sharing it with others on our iPad is a pretty good choice, and you can do that with mac

video converter, actually, compared to other stereotyped dance movies, I think this one conveys some new and deep thoughts to us, not just superficial love and winning, losing or something.

video

converter.

Since 2006 "High School Musical" has been released for the first time, the series became Disney's representatives, especially for those boys and girls, which also make the other film companies very envied, Last fall, Paramount announced to remake a classic musical movie of 80's, which is "Footloose" and invited Kenny Ortega (who directs "High School Musical") to direct it and Zac Efron to play the protagonist, but Zac doesn't want to be stereotyped, so he refused, fortunately, Chace Crawford, who is one of the famous star in drama in "Gossip Girl" agreed to join the film, then the preparatory work could be carried out smoothly, but no one see Chace Crawford in the film, so I guess something has happened, and Craig Brewer refused to directed the film twice.

I gotta say this film has been through a tough time. Although it has not very high investment, still sharing it with others on our iPad is a pretty good choice, and you can do that with

mac

video converter, actually, compared to other stereotyped dance movies, I think this one conveys some new and deep thoughts to us, not just superficial love and winning, losing or something.

It is Said that Apple Will Not Release Mac Pro

It's said that Apple may won't release the new Pro, because Mac Pro's sales has a distinct decline among consumers and enterprises in recent years, so the Mac Pro product line is already not very profitable for Apple, that's the reason why Mac Pro has an uncertain future. Actually some observers have said before that Apple's management has been re-considered whether to continue investing its Mac Pro products.

And here is Mac's situation in the market. The entry level Macbook Pro, the 13-inch received a 2.4Ghz dual-core Intel Core i5 processor as well as a 500GB hard drive. It still costs \$1,199. The next model is up of the same size, scored a 2.8GHz dual-core Intel Core i7 and a larger 750GB hard drive. The price also remains the same at \$1,499. As for the 15-inch models, both now include quad-core Intel Core i7 processors. The lesser of the two has a 2.2GHz processor and a 500GB hard drive and a faster AMD Radeon HD 6750M discrete graphics card with 512MB of GDDR5. The faster machine now sports a 2.4Ghz chips, a 750GB hard drive and AMD's Radeon HD 6770M with 1GB of GDDR5. They sell for \$1,799 and \$2,199 respectively. Lastly, the lower end 17-inch Macbook Pro scored the same update as the top tier 15-inch Macbook pro, though you can bump that to 2.5GHz for \$250 more. It starts at \$2,499. We can see that Mac is still popular in the market, after all, it has sound functions, like with

dvd copy mac, we can enjoy a bunch of DVDs on the other devices of Apple, but maybe the expensive price let consumers can't afford it, so Apple may want to give up that product line because less people will buy it.

Last week, Intel's upcoming Sandy Bridge E Xeon processor pricing information has emerged, the E-series processors are likely to be equipped with the Apple Mac Pro early 2012 on, Mac Pro was last updated in 2010 medium, and Intel's new Mac Pro processors in turn release time from this year's delayed until next year. While the new processor release just around the corner, but there is news that the next Mac Pro product lines are not sure, Apple may not release the new Mac Pro. Informed sources said the Mac Pro products in consumer and business sales in the sales of recent years there

has been significantly reduced, so the Mac Pro product line for Apple, has less money.

The report said Intel's latest Thunderbolt interface has been equipped with all of the Mac in the Apple models, the interface can greatly enhance the scalability of these Mac, Mac Pro and was only done to complete the task. Apple desktop sales currently account for 30% of all computers, while 10 years ago, the figure was 70%. This is also from the side shows the importance of Apple's desktop computers are constantly reduced.

Without question, Mac has been a part of our lives, we almost use it all the time, looking for information, watching videos with dvd

ripper for mac, etc, but since it has rumors about Apple may won't release Mac Pro, it says something, maybe.. I don't know, just for ordinary consumers, maybe they don't want to buy it because it's too expensive.

Paranormal Activity 3 Still Attracts You?

No suspense, 'Paranormal Activity 3' became the box office champion on its opening weekend after being released, and this achievement has surpassed the other two large-scale films "The Three Musketeers" and "Johnny English Reborn 2" which are released at same time, and obviously, the investment of 'Paranormal Activity 3' is far low than "The Three Musketeers", but it makes much more money, so if it attracts you, you can download it to your mobile devices with video converter reviews then share it with your friends.

'Paranormal Activity 3' continues the much-anticipated supernatural-horror series. The film is set in 1988, 18 years before the events of Paranormal Activity and Paranormal Activity 2, when Katie and Kristi were children. The central story in this installment revolves around the childhood of Katie and Kristi, the

unlucky protagonists of the previous film - hence calling it a prequel even though it's billed as a sequel. When Katie and Kristi's parents notice a strange occurrence taking place during an earthquake, their father decides to set up video cameras around the house as surveillance during all hours of day and night. Things take a freaky turn when Kristi begins talking off camera to an imaginary friend named Toby, who she claims lives in their closet and tells her secrets. As usual, everything gets stranger and more out of their control until Kristi's parents must finally confront the secret at the root of the paranormal activity. I think its plot still sounds attractive, especially to girls, don't ask me why, I don't know, what I know is most audience of this film is female, and remember, you can convert this film from your PC to your other devices with

free

mp4 converter, then you can enjoy it anytime anywhere.

'Paranormal Activity 3' has two extreme assesses, 25 unit media give 59 point to this movie, which is not bad. Owen Gregory Berman, the film critic of "Entertainment Weekly" said: "For me, the bottom line is I'm rarely shocked by horror film, but in the process watching 'Paranormal Activity 3, I'm keeping a high state of tension. " So he gave the film 91 point, which is the highest point that film gets. "Los Angeles Times" gives 90 point to this movie, it said among three films of this series, the third one is the best, it gave audience the strongest feeling. "Time" gives 80 point, saying there are two boring plots in this film, one is the mother with a monster mask, and the other one is the nanny jumping front of the camera, besides these, other spots look cool. "Hollywood Reporter" has given 80 point, saying that although this film didn't break the routine, but it still plays Paranormal Activity very skilled.

Of course, also have lots of media can't stand this film, "Rolling Stone" just gives 50 point, Peter Chavez, the critic of "Rolling Stone" critic said "I know 'Paranormal Activity 3' will have a good box office, but this film is really not worthy of even two stars, so you should save their money, and I beg you not to make another sequel." "Washington Post" gives 38 point, it said that this is just an old-fashioned ghost story made with new technology. "New York Post", same with "Washington Post", 38 point, it said horror film just likes the lowest level comedy. Roger Ebert, the famous film critic from "Chicago Sun-Times" gives the lowest score - 25 point, he said:" I really don't understand why everybody so love to watch 'Paranormal Activity ' series, if the

first one is fresh for us, but why you still want to watch the third one with the same plots?"

It did have extreme perspectives, so how do you manage that?

Tim Cook Said He Doesn't Worry About Kindle Fire

You may think that Apple feels upset and threatened about Kindle Fire, but no, completely opposite, analyst Ben Reitzes of Barclays spoke to Apple CEO Tim Cook and CFO Peter Oppenheimer regarding the Kindle Fire, they seem be the last one who will worry about Amazon's tablet.

While the low-low price of Amazon's new tablet, the Kindle Fire, is mistaken being called a viable competitor for the iPad, Apple is perfectly happy with the gadget's introduction into the tablet market because it just adds another level of fragmentation to the Android platform. Kindle Fire that just priced 199 dollar looks very competitive, and most people think it will become the new iPad competitor. However, due to the use of the Amazon Kindle Fire is another system that will further divide the flat panel market. Kindle Fire applications compatible with Android system can either product is compatible with Amazon. The more fragmentation, the better, says Apple, since that could drive more consumers to the stable Apple platform, another product of Apple platform - Mac also has invincible status in the market, this point can be proved by the popularity of Apple's derived products like mac dvd burner.

The Fire has a different look than other Android-based tablets, which may cause them to look strange, and this device may even fuel a whole new category of custom built Kindle Fire apps, further fragmenting the operating system market. While Amazon has made a smart move by offering their tablet at an impossibly low price of \$199, the Kindle Fire is also half the device that the iPad is. By undercutting their competitors, Amazon will gain momentum in the category of market share, but it is less likely to

sustain longevity once people realize that the Kindle Fire is more like a toy than a piece of technology.

Ben Reitzes believes that Apple will lower the price of iPad in the future, but they will not at the expense of product quality and user experience and as a means to compete. The angle of Apple and Amazon to enter the flat market is completely different. Apple iPad have earned lots of money, but the price of their content and services is relatively low, to maintain the balance of payments. Instead, Amazon is selling low-priced Kindle Fire, and then attracts customers to buy their content, entre their products ecosystem. iPad also have many other applications, like dvd copy mac , it's a gadget that can help iPad users enjoy videos on iPad, which certainly is helpful to iPad's sales.

If you just on the sideline about iPad, then you may be tempted by Kindle Fire, after all, it is so cheap. And now it's said that Amazon will introduce its Kindle Smartphone, it is just a matter of time, they said if Amazon want to be Apple or beat Apple, then they have to create something that can compete with iPhone, seems like Amazon just won't stop to chase Apple.

50/50

Adam (Joseph Gordon-Levitt) is a 27-year-old radio station planner, but one day, he is diagnosed with a rare cancer. With the company of his friend Kyle (Seth Logen), his mother, and Katherine (Anna Kendrick) who is a young psychotherapist, Adam finally knows who he really is and what's the most important thing in his life.

If you would like to enjoy this movie with your portable device, then you can try blu ray ripper.

Adam Lerner has a pretty great life - with a talented, sexy artist girlfriend and a cool job with NPR, the 27-year old seems to have it all. But when Adam discovers he has a rare and possibly fatal form of cancer, his entire life turns to chaos. As his world starts to unravel in every way, Adam finds himself dealing with the wellmeaning but totally outrageous attempts by his friends and family to make it all better. His best friend, Kyle, uses Adam's condition to lure girls into sympathy sex, his overbearing mother loses sight of him in her own fears, his otherwise-occupied girlfriend, Rachael tries to distract herself an increasingly frantic social life, and Katherine, the inexperienced therapist assigned to his case, struggles to keep up with the needs of her third client ever.

Inspired by a true story, 50/50 is an original story about friendship, love, survival and finding humor in unlikely places. Joseph Gordon-Levitt and Seth Rogen star as best friends whose lives are changed by a cancer diagnosis in this new comedy directed by Jonathan Levine from a script by Will Reiser. 50/50 is the story of a guy's transformative and, yes, sometimes funny journey to health - drawing its emotional core from Will Reiser's own experience with cancer and reminding us that friendship and love, no matter what bizarre turns they take, are the greatest healers.

The script of 50/50 is not fresh, but it's still a novelty. Film telling a tale, the slow pace is moderate, does not give the feeling of boredom. Outstanding actor, Joseph Gordon-Levitt and Seth Rogen in the film is very tacit, because best friends in the real life just like this, the audience is also very easy to feel good about the role of them. There are a lot of tear-jerking film clips, about family, about friendship, about life. The film is a comedy drama also is a seriousplay, it is very true that is not artificial, it can definitely move you.

Formerly, this film was called "I'm With Cancer", but because of the world "cancer" in the title, so it was changed into "Live with It". At last, the name was changed to "50/50" which means the hope that Adam could be cured was 50%. It's a very incentive story, if you happen to have a PS3, you can try to rip blu ray to ps3 to enjoy this movie.

Horror Movie Dream House

What will it be when the coolest James Bond in a horror movie? Daniel Craig recently stars a horror movie "Dream House". For us, Daniel Craig is more compatible to play tough guy in action movie, just like in "007: Casino Royale", if you like Daniel Craig or this film, you can download it to your portable devices to watch it anytime, just need to convert to mp4, then you will see his totally different performance.

For some people, a good house will be the place that leaves many memories in his life. But for Will (Daniel Craig), a publisher, the mansion he is about to move in will be his nightmare all his life. Will is a successful publisher, carrying his wife (Rachel Weisz) and her daughter moved into a house in the suburb of New York which is been considered the dream house of luxury living but he failed to inquire into this house in advance, a series of bizarre things happened after they moving in, then Will knew this house was a haunted house where serial killing happened from his neighbor (Naomi Watts). The people who lived here was a family too, but wife and daughter were slaughtered brutally overnight, and man of the house has disappeared in the night, so he was suspected to have significant fiduciary duty. When Will step by step through the front of items left behind a family, trying to slowly cut open the truth of that awful tragedy, he also found that in somewhere it seems someone is staring at him. Is missing the front man of the house and back? Their family will be killed the next target?

It's directed by Irish director Jim Sheridan, Daniel Craig, Rachel, Naomi Watts and Rachel Weisz star. Jim Sheridan is a very famous director from Ireland. " My Left Foot: The Story of Christy" " In The Name Of The Father" these Irish "scars" category film help Sheridan gains his international reputation; then he begins to step in Hollywood, and directed "In America" and the recent film "Brothers", although he had a totally difference working environment, but the family element still been kept in his film.

Those films are about family, maybe that theme is your fancy, so if you would like to watch them with HD version, video converter reviews can help you with that. And this time, the director begins to play a horror film, which a new attempt ofr him. Even Daniel Craig's blonde James Bond can't be accepted by audience, but he is still the shiny star in Hollywood. "The Girl with the Dragon Tattoo" (U.S. version) and "Cowboys and Aliens" are still hot choices for us, but don't forget the "The Invasion" which is released in 2007, it's a terrible tragedy.

Now from the box office, this film doesn't gain its expected achievement, except the famous director and famous protagonist, most people who have watched it think it's not a horror film, it's about familial affection. Anyway, you can get your answer after you watching it.

Justin Timberlake in New Sci-fi Film In Time

Have you imagined that human beings will stay young forever in the future? Of course, this couldn't happen in the reality, but in the movie, everything is possible, sci-fi film "In time" presents us a future that everyone will not grow up until they reach 25-years-old.

In a future where time is literally money and aging stops at 25, the only way to stay alive is to earn, steal, or inherit more time. You can hand over your time with a sort of secret handshake, which is a little too easy and feels like a cheat. Nearly every twist and turn of the plot seems designed to remind of that most fundamental truth - every moment alive puts you one step closer to death. In this new age it's called "timing out," a very neat and tidy process - too neat and tidy. So the tension started by all

that ticking too quickly drains away.

Will Salas (Justin Timberlake) lives minute-to-minute, until a windfall of time gives him access to the world of the wealthy, where he teams up with a beautiful young heiress Sylvia Weis to destroy the corrupt system. But Will Salas is falsely accused of murder, he must figure out a way to bring down a system where time is money - literally - enabling the wealthy to live forever while the poor, like Will, have to beg, borrow, and steal enough minutes to make it through another day, seems like this time Timberlake has different performance, compared his other movie "Friends with Benefits", in "In Time", he is more like a hero, you know, kick bad guys, save the world or something, if you would like to watch it on your portable devices, you can do that with video converter reviews, it's more convenient if you want to share this film with other people.

Cillian Murphy plays a "time charger", in short, a law-executor in that community. He and Penny Collins works together to hunt down Will. And the 31-year-old Vincent Kartheiser who is famous for "Mad Men" plays Amanda Seyfried's father, but you are supposed to know that the father he plays is only 24, well, no one will be older than 25 if they have money to buy time. The age gap between the father and daughter is not great, and Vincent is a baby face, so perhaps directors chose these actors aims to let us feel time confusion. Johnny Galecki plays Will's best friend. And there are a bunch of young actors including Alex Pettyfer and Matt Bomer.

"In Time" was supposed to turn Timberlake into a superhero, though given the way he manages a fairly massive pop career with an increasingly impressive acting portfolio ("Social Network" most recently), that may not be necessary. He brings an interesting sensibility to his characters, Will included, that suggest a complex interior that "In Time" never quite reveals. The same goes for Seyfried ("Mamma Mia!" "Red Riding Hood"), who can do a lot more than use those big eyes and sleek lines.

Maybe you think the plot is too boring, but think about it, we don't have many chances that can enjoy so many young actors' performance at same time, after all, they are all 25 or more

younger, so how about upload it to your iPad or other iDevices with

mac

video converter to watch it whenever you want.

Top 5 Games for iPod Touch

Even though iPod is designed for playing music mainly, but its applications are far more than that, as game fans, naturally, we want to use our iPod to play games whenever we want.

Yep, Apple brand products all have powerful functions, but you know, iPod is much cheaper than iPhone, not to mention iPad, so I guess, iPod is the best choice for us. Of course, it's another thing if you have enough money, after all, iPad is the hottest thing in the market, just need to figure out

how

to sync ipad 2 then we can share our stuff in iPad with our friends and family with computer. But for domestic consumers, it's more appropriate to buy iPod, it can give you the same enjoyment, and here are the best interesting games for iPod Touch, you still own then even though you don't have iPhone.

1. Speed Forge Extreme 3D

Speed Forge Extreme 3D is a flight racing games, it has 2142 the outer space as background, with beautiful 3D graphics, set battle speed in the game. There are two operating modes: gravity sensor and a virtual steering wheel.

2. Cliffed Free

This is the Ad-Supported Version of Cluffed XL. Challenge your friends to the most addictive race to the bottom! IUGO presents its latest sensation in casual gaming with this frantic 2D scrolling racer. WARNING: This game will get your heart and fingers racing!

3. STREET FIGHTER IV

This game has been a symbol of those iconic figures. Aris, Chun-Li, Russian Colonel have all come back. In the new era under the new 3D technology, they become more three-dimensional rendering and vivid. The picture is more brilliant, with close-ups. The only thing that doesn't change is the essence of the game. Fighting game still makes us boiling. The game included 8 classic roles and 7 different fighting environments, and you can adjust four levels of difficulty.

4. TightWire

TightWire is a challenging, tilt-based game that revolves around an extraordinarily simple concept: tightrope walking. Using the accelerometer, your task is to guide a rather obese character as he fights gravity and struggles to cross the chasm between buildings. Surprisingly enough, it's addicting, challenging, and definitely polished.

5. Dungeon Hunter 2

The benchmark for action RPGs hits your iPhone & iPod touch in its second opus. Slide to Play says, "Exceptional games like Dungeon Hunter don't come along often." And that is why you need to play its sequel. Dungeon Hunter 2 looks and controls much better than its predecessor, and boasts an improved save system that no longer loses player progress whenever you have to take a phone call or suddenly exit the app. Other welcome additions, like an improved character customization system and online multiplayer co-op support, make this a markedly better game than the already-solid Dungeon Hunter.

Which one of them has attraction to you? Maybe you can upload to your computer with ipod to computer transfer, share it with your friends, it will be fun.

What is Apple TV and How to Set Up it

Certainly you are familiar with iPad, iPod and iPhone those Apple brand products, but there is still a question about Apple TV, when I first heard that name, I pictured a big screen television with special features in my head, of course, now I know it was an honest mistake.

This week the folks at Apple have sent out an update to Apple TV users everywhere that they could have the newest build that addresses several issues found in the version released right alongside the iOS 5 release this October. Apple TV version 4.4 is now updated to version 4.4.3 which is indeed the third update since the original 4.4 release. For those of you still on a pre-4.4 release, note that everything newer adds several features like Wall Street Journal Live, National Hockey League Content, Photo Stream, AirPlay Mirroring support, and iTunes Trailers.

The early Apple TV models had a hard drive that would sync with your computers' iTunes libraries. You could also buy movies from the iTunes store and save them to the Apple TV's hard drive. However, the second generation Apple TV does not have a hard drive so it can only stream media. But if you want to watch DVD movies in Apple TV, easy, you just need a free mac dvd burner to copy movies to your iTunes, then you can hook up the Apple TV to iTunes.

So here is a question, what do we need to know about how to set up Apple TV?

- 1.First, you need to buy one HDMI cable. Plug the cable into your HDTV or receiver and your Apple TV. Connect the device to a power outlet, then it will boot up.

- 2.Then, you need to choose the language you speak.

3.The Apple TV will then scan for available WiFi networks to connect to (assuming you're using WiFi, that is. The Apple TV can also connect via Ethernet). Find yours and choose it. Then enter your password (case sensitive, of course) and hit "done."

4.Choose whether you want your Apple TV to report diagnostic information to Apple or not, and continue.

5.Make sure Home Sharing is enabled on your main home computer. Home Sharing allows you to stream content from your iTunes library to the Apple TV to be displayed on your HDTV. Sign into Home Sharing with the same iTunes account used for sharing on your main iTunes library.

6.At this point, you should be all set. The Apple TV ought to be connected to your WiFi network and the Internet, as well as the iTunes library on your computer.

And remember, even though we can't save movies in the hard drive, because the newest Apple TV doesn't have hard drive, but we still can watch many DVD movies with it, what we need to do is copy dvd on mac, hook up those DVD movies to our iTunes library, then connect Apple TV to iTunes.

Another Action Movie Starred by Jason Statham Killer Elite

You may think if a movie has one famous Hollywood star, then we have enough reason to spend dozens of our money to sit in cinema to enjoy it, but what if there are three actors that you fancy a lot appear in the same film? Excited? Well then, you can't miss "Killer Elite", starred by Jason Statham, Robert De Niro and Clive Owen, attractive enough, right? It's pretty worth to share with your friends, so upload it to your iPhone with the help of dvd burner, that's the way you can enjoy it anytime.

Jason Statham will star in the action thriller based on Ranulph Fiennes' best-seller "The Feathermen." Based on real events, the story follows a group of former British special forces members who are being hunted by assassins. Statham will play a former Navy Seal who is forced out of retirement to save his mentor and closest friend. Covering the globe from Australia to Paris, London and the Middle East, Danny and Hunter are plunged into a highly dangerous game of cat and mouse - where the predators become the prey.

Whether executing masterful assassinations, leaping out of explosions or hurling himself through a second-floor window while tied to a chair, Statham, the world's premiere action star, is in top form in Killer Elite. Owen, his rugged handsomeness accentuated by one badass moustache, brings sophistication to this complex man burdened with grave duties and clearly in way over his head. De Niro, meanwhile, proves once more that investing a character with carefully chosen details will enhance the impact of whatever sort of film - even one galloping along on pure adrenaline.

"May the best man live" is the cheery tagline for this hitman faceoff with Jason Statham, Robert De Niro and Clive Owen. A tasty trio, but there's something vanilla about this one-last-job saga in which the slaphead superstar must slice and dice ex-SAS geezers lest De Niro get decapitated by a vengeful sheikh, all the while eluding Owen, who's been commissioned by a coterie of cackling bankers. Maybe it's all the detail that bogs it down: the ancient war crimes and the 80s stylings, the A-list support and the weirdly complex plot. They're a distraction from the main event: a bald man beating people up. Keep it simple. Keep it Stath.

It's a film version of one of those airport novels that get taken on holiday and thrown away on the way home to avoid going over your baggage allowance, but still, it has a film version, so you don't need to worry about your baggage allowance, just enjoy it in your iPhone or other portable devices, if you are Apple user, you can copy dvd to mac, more convenient, right? Plus, it's a real pleasure to watch Statham in a film that doesn't require him to explode every five minutes and I

enjoyed the plot simply because it isn't a generic good-guy-kills-bad-guys-whoops-something's-blown-up drearathon. Isn't Statham allowed to have more of a dramatic range than popcorn movies such as Crank and Transporter? Alright, he's still playing essentially the same character he always does but that didn't do Michael Caine's career much harm, did it?

Beauty And The Beast: The Enchanted Christmas Blu-ray Review

Christmas is the biggest holiday of the year, everyone will engage in it, especially those movie companies, they will film a bunch of movies about Christmas or remake those classic movies that already have great influence in the world, like this time, Beauty & The Beast: The Enchanted Christmas is debuted on Blu-ray, which definitely can cause another Beauty and Beast craze.

Beauty & The Beast: The Enchanted Christmas, it's classic animated film, which was released in 1997, the original score and songs were composed by Rachel Portman. The film is a midquel that takes place within the timeline of the original Beauty and the Beast. The film also shows the time that the enchantress put the spell on the castle in the first film in more detail. This enchanting adventure boasts exciting bonus features, delightful songs, spellbinding visuals, and enduring themes of hope, friendship and love. Your family will experience the spirit of the season all year long with the timeless magic of Beauty & The Beast: The Enchanted Christmas, it will be great to enjoy it in TV with your family after ripping the Blu-ray version with free blu-ray ripper.

It's been twenty years since "Beauty and the Beast" truly changed the animation landscape, bringing even more esteem to the Disney logo after the company's comeback with "The Little Mermaid" by earning the first nomination for Best Picture for an animated film. The movie became a franchise, spawning toys, games, and even a hit musical. It also birthed a pair of straight-to-video

quasi-sequels, both of which have been re-released just in time for families on Black Friday. Add "Beauty and the Beast: The Enchanted Christmas" and "Beauty and the Beast: Belle's Magical World" to your list.

In this film, The Beast isn't happy about Christmas and he forbids it in his castle. In the first opening scenes, we see that Cogsworth, Lumiere, Chip all gather around as Mrs. Potts explains the true story behind Christmas' return to the castle. Belle and the Beast argue over Christmas. Eventually we're taken into a flashback on the real reason on why The Beast dislikes Christmas, we get to see that he's transformed by the enchantress who put the spell on the castle in the first film (Beauty and the Beast) which made him turn from the Prince to the Beast which occurred on Christmas.

Don't think it's an animated film so only kids will be interested in it, actually it's the first choice for your Christmas when you sit on the couch with your family, after all, it's a beautiful fair tale, we all have has a fancy about prince or princess when we are kids, or why you think the movie company will remake the Blu-ray version of this movie, it means it's worth to convert blu-ray to dvd to save it in your disc forever.

How to Remove DRM Protection from Music or Movies that you Purchase in iTunes

If you have any of Apple products, then you must know that one tool is essential, which is iTunes, all of our music and videos are purchased in iTunes, it provides all we need for entertainment, but there is one pity - we can't play iTunes stuff with other devices like Zune, PSP, Creative Zen, Sony Walkman, Cell Phone, Blackberry, HTC, Gphone, etc, because of the Apple DRM protection.

Then what is DRM protection? DRM (Digital Rights Management) is a term used to describe procedures which are taken to prevent unauthorized use of the media in question. So, for example, if you

have music with DRM purchased from the iTunes store, you will not be able to play them on any media player, other than Apple's. You will also not be able to convert these files to the MP3 format because Apple, under DRM, doesn't give you the rights to do so. But that's not what we want, what we want is we can play those songs and videos with whatever devices we want to. So how do we remove DRM protections from iTunes files legally? Basically, there are two ways.

The first one, we can remove protect with some software, for example, drm removal, of course, there are a bunch of removals out there, you just need to chose one. Basically, DRM removal can help you remove DRM protection from movies and songs bought from iTunes, Microsoft Media Center, Napster, Pandora, Spiral Frog and other DRM protected media center legally, you just need to install this software, then it can help you do what you want, there are free ones and paid one, but the paid ones may be worthy to trust, meaning it has a better quality.

The second method is burn whatever you want on a CD/DVD. Here are the steps, Insert a blank CD/DVD in the drive and open iTunes on your computer. Select the File->New Playlist option. The next step is to select all the files that you want to remove DRM from and drag them to the playlist that you just created. Now that you have all the tracks you want on the CD/DVD media, right-click the playlist and select the option to "Burn playlist to Disc". iTunes will present you a dialogue box where you can select the kind of CD/DVD that you want to burn. Make sure you select the Audio CD option. Selecting the Edit->Preferences option and under the General tab, click on Import Settings. Select the MP3 Encoder from the drop down list and you're all set to import the track on the Audio CD that you just wrote as MP3 files. Remove the CD from the drive, and insert it back again. iTunes will prompt you to import the tracks from the CD to it's own database. Let it do so and at the end of the import process, you'll have new MP3 tracks void of any DRM.

You can see that the second method only can remove DRM protection of music from iTunes, which means if we want to remove drm from epub, it can't help us, but DRM removal that you can find in the internet is powerful enough to help you remove

protection from anything you want.

Which One do You Want for Christmas Gift, iPad or Kindle Fire

What's your most wanted gift for Christmas? iPod? iPhone? iPad or Kindle Fire? Maybe it's not necessary to compare iPod with iPhone or iPad, after all, they are family, so let's see the how it's going between iPad and Kindle Fire.

Black Friday and Christmas season are about to ensue, at this spree, the sales of award-winning Amazon Kindle Fire can overshadowed Apple iPad? According to the survey, more than 2,000 respondents, 51% said more like Kindle Fire between two. These data is very interesting, because the amount of respective is the same, but when then actually go to the shop and buy what they want, iPad has a distinct advantage. The survey found that in answer to "Holiday is most likely to buy Tablets products," when 62% of people voted for the iPad, Kindle choose who accounted for 38%. Of course, the real sales data, but also to the season ends, we will get from Apple and Amazon. However, an obvious phenomenon is that a certain number of people, they like this, but buy another. However, no matter which one you decide to buy, here is a tip for you to use your Tablet as you wish, if you want to enjoy your files in iPad or Kindle Fire with another devices like PSP or Blackberry, you will need drm removal, because we all know the files in iTunes or Kindle all have drm protection.

Among the potential new users who are interested in buying the Tablet PC, about 65% of people said they intend to buy iPad, and iPad customer satisfaction is as high as 74%. ChangeWave Research recently published in November for U.S. consumers interested in buying the findings of the Tablet PC. ChangeWave Research from North America to recover a total of 3043 questionnaires were asked ticket receipt, which the Amazon Kindle Fire 22% of potential users to purchase rate firmly occupy the

second place ranking; Samsung Galaxy Tab 4% in third places bit. ChangeWave Research's survey, November 14% of U.S. consumers intend to buy in the next 90 days the media tablet computer products, in August this year, this ratio exceeds 6% of the survey more than doubled, it is drawn over the same period last year 4% of the survey results more than three times.

According to Nielsen's statistics, for users that between 6 years to 12, iPad is their most want holiday gift, and this is iPad the second consecutive year be the top in this list. About 61% of the iPad buyers are parents. Market growth will not only bring revenue Tablet PC manufacturers, but also increase the demand for child-related content. To Walt Disney and other industries on the giant, down to small innovative companies currently are developing games, interactive books and other applications to attract children. Once you having these files in your iPad or Kinle Fire, to take full advantage of them, you'd better have a free drm removal, so you can utilize these resources in your other devices.

So obviously, Apple is still completely dominating the Tablet market, even though the release of Amazon Kindle Fire is a direct challenge to Apple, but we can see the difference between them, according to the record, iPad continues its leading status to be the most popular gift for Christmas.

The Classic Black Comedy â??Scary Movieâ??

Scary Movie is a series movie, until now, this series already has five works altogether, maybe you can recall this classic black comedy with me, and the reason is recently I let the second one convert to mp4 to upload to my iPhone and watch it again, just find out it still can make me laugh.

Sometimes you have to admire the "extraordinary courage" of Hollywood producers of, an understatement "I lied" let one film that advertised "no sequel" the film has the chance to create more unbelievable miracle. This quintessence that was been criticized the fall of Western civilization by mainstream critics, last summer in the U.S. hit a record \$ 150 million at the box office, becoming one of the top-grossing films of Dimension Films in history, so the boss of film company asked Wayans brothers , who are the writers, directors and actors of this series to shoot a sequel, but since the first episode of the story is indeed "no sequel" the routine, most of the characters in the film have been the end of "scrap", so Wayans brothers, let the protagonists back to lives.

The first episode of the story is when a hot young Dimension film "Scream" main line, interspersed with the "I know what you did last summer", "Halloween," "Urban Legend", "Hacker Empire, "" Blair Witch "and other classic film clips to imitate, and laugh at the end of" the Usual Suspects "of the plot, people laughing at the occasion, director of the imagination even more impressed. Second episode of the story is another way to survive in the first episode of supernatural horror film included in the fun of the list. Last year, remapping of the Oscar-winning classics "The Exorcist" bear the brunt of the detonation has become second episode plot. Said that in order to ensure the bursting effect, Wayans brothers to spend \$ 2 million special invited guest Grand Master Marlon Brando, Brando, suffering from pneumonia torture "very impressed", carrying oxygen bottles to the studio, only a few rounds down on the breath, but to the middle of substitutions, according to the Wayans brothers did not want to say is the godfather of murder charges back.

Interestingly, before the exhibition of this film, there was reporter interviewed Wayans brothers to talk about their views of critics, and they said they really didn't care, because some of their movies were praised by critics had a poor box office results, but the "Scary Movie", which was not praised by mainstream critics, has created a box office miracle. Wayans brother said the audiences are their touchstone, especially the younger audience will not believe the critics, if a movie is criticized by critics very badly, we will have more interest in it.

If you would like to watch this series on your Mac, you can play it with QuickTime after converting the format with avi to mov converter, it will be much fun.

Grippingly Dark and Cynical Politics Drama: The Ides of March

If there is any a film can let me sit in my couch and stare at my PC screen for 101 minutes, it must be The Ides of March.

Directed by George Clooney, casting by George Clooney, Ryan Gosling and Philip Seymour Hoffman, what's more do you need to expect?

The movie is a grippingly dark and cynical drama of insider politics, set during the days leading up to an Ohio Democratic presidential primary. Ryan Gosling, proving that he can flirt with sleaze and still make you like him, stars as Stephen Meyers, the idealistic but also shrewdly opportunistic press secretary to Gov. Mike Morris (played by Clooney), a soulful and articulate Obama-in-2008-esque candidate who is promising a new kind of politics. Morris and his team are out to win the endorsement of a senator (Jeffrey Wright) whose rival delegates could clinch Morris the nomination. If you would like to enjoy this film in your portable devices like iPad, iPod, iPhone etc, you can convert it to them with best video converter for mac.

It is adapted from Beau Willimon's play Farragut North (the screenplay was co-written by Clooney, Grant Heslov, and Willimon), offers a densely shuffled version of actual headline campaign news: not just Obama but the Clinton scandals, Howard Dean, and a nod to Mike Dukakis, all knitted together with cameos by Charlie Rose, Rachel Maddow, and Chris Matthews that (for once) don't feel like stunt reality gimmicks but are woven into the movie's texture.

The Ides of March is the fourth feature directed by George Clooney (after Confessions of a Dangerous Mind, Good Night, and Good Luck, and Leatherheads), and it's his best one yet. Actors who become directors tend to focus on performance at the expense of everything else. Clooney certainly brings out the best in his actors, but his driving trait as a filmmaker is that he knows what plays - he has an uncanny sense of how to uncork a scene and let it bubble and flow.

The Ides of March serves up everything we've come to know about the dirty business of how campaigns are really run in this country. That may sound like boilerplate cynicism, but what's new is that Clooney exposes how in our era the thorny process of politics has become the content, blotting out the meaning of policy the way an eclipse blots out the sun. The movie suggests that that's what occurred in the Obama administration. But it also says a spirit of venomous aggression has entered our politics, one that (the film implies) Obama would do well to embrace more than he has. The Ides of March isn't profound, but it sure is provocative. It's a fable of moral urgency, a savvy lament, and a thriller of ideas that goes like a shot.

No matter Gosling or Seymour Hoffman, they all have wonderful performances in this film, even Gosling has a weird shape face just like Robert Pattinson, but I still think he is a good-looking actor. Of course, who can ignore the most big shot, the director and protagonist - George Clooney, so much glaring stars, your friends must like them, too (who doesn't), so you can import it to your Phone after converting the format with best video converter to share it with your friends anytime anywhere.

Top 6 Applications for iPhone

Do you know how many iPhone applications out there? Can anyone say a specific number? I guess it's a little difficult, however, no

one will think applications for our iPhone is massive enough, because we always want more better, so, brand new applications continue to be released, and I pick the best from the bunch, you may haven't own some of them.

Asteroids GUNNER by Atari: "In Asteroids GUNNER, space is like a congested highway in a hailstorm. In the busiest sections of the game, debris flies by your tiny craft, and there's little you can do but hope to shoot your way out. It's a perfect way to take the classic Asteroids gameplay formula and bring it into the next generation.

iphone to computer

transfer: "we all know how to transfer songs, games, videos, movies from computer to iPhone, we just need iTunes. But iTunes doesn't provide the solution for us to transfer files from iPhone to computer, that's the meaning that this gadget exists, it mainly helps us transfer stuff from iPhone to iTunes or computers, to backup in case we lose them, for example, if you know how to transfer

music from iPhone to iTunes, then you don't worry about deleting your songs in your iPhone by accident.

Blueprint 3D: "When you launch a level in Blueprint 3D, you're presented with an explosion of scribbles. With single finger swipes you rotate those scribbles until they start to line up into a recognizable image. Tweak and reposition it until it's right, rotate it with two fingers, and you're done. This only takes a few seconds once you get the hang of it.

Crimson: Steam Pirates for iPhone by Bungine Aerospace): "In Crimson: Steam Pirates for iPhone, plumes of black smoke fill the blue Caribbean sky as Thomas Blood's pirate fleet steams ahead-over, above, and below the waves. On the surface, ships bristle with swivel cannons and lightning guns. Above, zeppelins drip with incendiary bombs. And below, silent and deadly, submarines stalk their targets, torpedoes at the ready."

NFL Flick Quarterback by Full Fat Games: "NFL Flick Quarterback HD is the latest in a string of 'Flick' titles from Full Fat Games that already includes Soccer, Golf and Zombie varieties and it gets the fully licensed NFL treatment. The graphics

are very strong, from the players themselves to the impressive stadiums and even the cheerleaders on the sidelines, the graphics pop off the screen and create a great looking game.

Poker Pals by Chillingo: "Poker video games, the ones where you don't earn cash, may have already had their renaissance, but Poker Pals puts a new twist on the old formula, while throwing in some engaging social options and then wrapping the whole package beautifully with a slick, intuitive interface and some good old-fashioned - Scrabble-meets-Poker - tactical gameplay."

Some of them are free, but some of them you need to pay for. Since most of them are games, so if you are a game player, then they are worthy for you to try.

What Do You Need to Know about DVD Recorder?

Have you noticed that DVD has been our company for many years?

It has become a part of our live, DVD movie, DVD player, DVD recorder,

dvd

shrink mac etc. But what exactly do you know about it except watching movies. There is much more comprehensive knowledge about it you don't know yet, like what is DVD recorder, here let's have a clear cognition about it.

Question 1: What's the difference between DVD recorder and DVD burner?

You may have heard lots of them, but there is still kind of hard when you need to use them, because you don't know the difference between those two things. DVD recorders and DVD Burners both create DVDs by "burning" via a laser to a blank DVD disk.

However, A DVD recorder typically refers to a standalone unit that resembles and functions very much like a VCR. All DVD recorders can record from any analog video source (most can also record video from digital camcorders via firewire). Like a VCR, DVD recorders all have AV inputs as well as TV tuner for recording TV shows. DVD Recorders come in several configurations: Standalone, DVD Recorder/VCR Combo, or DVD Recorder/Hard Drive combo units. Standalone DVD recorders cannot be used to connect to a computer for recording of data files and can only record video from analog video inputs and, on most DVD recorders, from a digital camcorder via an iLink (Firewire, IEEE1394) input.

The DVD burner is in the process of displacing its predecessor, the CD burner. In 2003-2004 prices dropped below cost thresholds, encouraging even non-electronics enthusiasts to buy a DVD burner if they have a use for it. DVDs and DVD burners are widely used with the format of video, which is storage-hungry in comparison to text and music files.

Question 3: Can DVD recorders connect to an Antenna, Cable, or Satellite Box?

While DVD recorders can be connected to cable and satellite boxes, not all DVD recorders have cable or satellite box control. This means that on more entry-level DVD recorders, when you set the timer on the DVD recorder to record a cable or satellite program, you may also need to leave your cable or satellite box tuned to the correct channel ahead of time or set the cable or satellite box's own timer to go to the correct channel to be recorded to match the time you have set on your DVD recorder.

If you are someone who need know these deep information about DVD, then it's all yours, but normally, like I said before, DVD is just a entertainment for us, we just use it to watch DVD movies or something, even so, you still need to know more about it to take full advantage of it, like how to convert DVD to AVI with dvd to avi converter freeware, sometimes we need to convert DVD movie to other format to play it with portable devices, so know more about it is not harmful.

New Year's Eve A Romantic Film Filled with Pretty Stars

If you still remember 2010's "Valentine's Day" and have interest in that kind of film, then you are lucky, this year its sequel "New Year's Eve" will have a date with you in New Year's Eve or earlier, just like its previous work, "New Year's Eve" still fills with a bunch of stars, Ashton Kutcher, Robert De Niro, Jessica Biel, Zac Efron, Katherine Heigl and Josh Duhamel etc. They will celebrates love, hope, forgiveness, second chances and fresh starts, in the intertwining stories told amidst the pulse and promise of New York City on the most dazzling night of the year.

After director Garry Marshall and writer Katherine Fugate's box-office success with Valentine's Day, a sequel of sorts was inevitable. Even the sequel has the same formula, packing as many celebrities as you can into multiple storylines and hope that all those pretty faces and gushy sentiments will distract you from realizing you're watching a same and no difference movie, but who can ignore a movie that has no many big shots aim to express love in New Year's Eve? So what you can do is not to judge, just to enjoy. By the way, if you want to enjoy this movie on your portable devices, the best video converter can do that for you.

As the new members in this movie, Jon Bon Jovi acted a rock star, it was a natural starring. At a party he met his ex-girlfriend (Halle Berry) who was dumped by him by accident. Seth Meyers played a failure father, in order to get \$ 25,000 prize money, tried to convince his pregnant wife (Jessica Bell) to give birth to the first baby in New Year of whole United States, only to find that he faced the unexpected fierce competition from a number of families.

There's the mousy middle-aged woman (an unattractively photographed Michelle Pfeiffer) who impulsively quits her boring desk job. She's hellbent on fulfilling resolutions amassed over the years - like traveling around the world and seeing Bali - all in a day. She engages the services of a bike messenger (Zac Efron) who

cuts corners but offers more excitement than she apparently has ever known. (He takes her to a spa named Bali and the world travel is done by hopping around a giant map in a museum.) Charmed yet?

Other vignettes are just as lame-brained. A slacker/New Year's Eve hater (Ashton Kutcher) and his perky neighbor (Glee's Lea Michele) get stuck in an elevator. Initially they can't stand each other, then after she sings a song in the confined space, sparks ignite.

Although the story line has not much freshness, watching this movie feels like attending a crowded Hollywood party filled with pretty people, so what will you lose? One hour and forty-five minutes? On the contrary, it's kind of entertainment to spend your spare time, just need a free mp4 converter, then you can enjoy it on your iPad anytime.

iPhone 3GS Is Still Alive and It Won't Be Eliminated by Apple

Everyone is talking about iPhone 4/4S right now, but what about the previous generation iPhone? Like iPhone 3GS. You think it's dead because you hardly hear news about it? This is absolutely not right.

Apple is maintaining a high level of production for the two-year-old iPhone 3GS, DigiTimes, quoting as always sources within Apple's supply chain, reports that Apple ordered 2 million units of iPhone 3GS for this quarter and another 1.4 - 1.6 million units for the first quarter of next year. No matter which one you have, iPhone 4S or iPhone 3GS, if you have an iPhone to PC transfer, you can move everything in your iPhone to PC, you can utilize your

iPhone as you want.

With no doubt, iPhone 4S is our favorite right now, it causes the craze in the whole world, no matter what country we are in, the biggest hope is iPhone 4S can be released in our own countries, even though the price is unbelievable expensive than its indigenous price. Considering its popularity, how could Apple give up this big chance to make bunch of money. In a change to the United Arab Emirates' Apple Store webpage on Saturday, Apple announced that the region will be joining its neighbor Saudi Arabia in launching the iPhone 4S on Dec. 16. Russia, Brazil, Chile, Malaysia, the Philippines, South Africa, Taiwan, Thailand and Turkey are also expected to release the newest iPhone on that date. China is looking toward a December launch, but no official announcement has been made.

But the truth is the sales of the iPhone 3GS have been going strong, considering the fact that it has been around for around two and a half years now. This handset came out around the same time as one of the first Android devices, but it still manages to generate sales, despite the lifespan of smartphones being significantly reduced. When Apple announced the iPhone 4S, they still did not discontinue the iPhone 3GS and this is like due to the fact that they are trying to manufacture handsets for all price segments.

According to Digitimes and multiple sources, Apple's success with the iPhone 3GS is due in part to their penetration in the entry level smartphone market. The iPhone 3GS is over 2 and a half years old and is still experiencing strong production rates. The 3GS is expected to be sold under AT&T's 2 year contract until the introduction of iPhone 5 or 6. Apple does not currently have any plans to eliminate the device.

It is said that Apple has been pushing the sale of its 8GB iPhone 3GS. It's very likely that Apple will continue production of the iPhone 3GS as its device to counter smartphone manufacturers who sell affordable devices in the market.

Between iPhone 3GS and iPhone 4S, there is a generation called iPhone 4, here is a tip for iPhone 4 users:
how
to restore iPhone 4, just remind you its existence.

Men in Black III coming in 2012

Columbia Pictures has announced that "Men in Black 3" will be released on May 25, 2012 in the form of 3D stereoscopic film. Maybe you still remember the first episode and second one were launched in 1997 and 2002 respectively, "Men in Black 3" is coming in 2012 after ten years since the second sequel, and Spielberg serves as the executive producer. If you are still interested in it, you can upload it to your portable devices with dvd shrink for mac after it being released.

Here is the specific information about the actors in Men in Black III: Will Smith, Tommy Lee Jones, Josh Brolin, Jemaine Clement and Tony Shalhoub. About the movie: Agent Jay travels back in time to 1969, where he teams up with a younger version of Agent Kay to stop an evil alien from destroying the future. Just like the first two films, which together grossed more than \$1 billion worldwide, Smith and Tommy Lee Jones act as alien-monitoring agents, complete with classic buddy cop repartee and big-budget effects. The screenplay of Men in Black 3 is created by screenwriter Etan Cohen who is famous for Tropic Thunder. Will Smith still plays Jay and Josh Brolin plays the young Kay.

Now you guy can search the trailer of Men in Black in the Internet. It's worrying that the majority is spent revisiting the elements of Men in Black that audiences already know and love, says Katey Rich at Cinema Blend, waiting until the last 30 seconds to introduce the potentially wonky time travel plot. The "mediocre" trailer "makes me wonder if they're still working out the plot kinks in the editing room." I actually like that the trailer didn't reveal too much of the plot, says Mike Lee at Fused Film. The mystery makes me more interested in the movie.

We've known since the first set photos that Brolin was an eerie dead ringer for a younger Tommy Lee Jones, crucial to the plot of Men In Black 3, which has Smith's Agent J traveling back in time and teaming up with a younger Agent K to solve some sort of mystery. Given that the previous two films relied on the odd and sometimes fractious chemistry between the jangly Smith and the tight-jawed Jones, Brolin was going to be in the tough position of playing a youngish man who still had Agent K's cranky charm. And yes, in the three seconds of time he gets in the Men in Black 3 trailer, we mostly see Brolin nail Jones's Texas accent and stony facial expressions-- but still, he seems to have everything he needs to pull the impression off marvelously.

For Smith, I gotta say it's not a worthy vehicle for him, if he is wise enough, then he won't choose this work for his return to the screen, because the time jump plot seems defective, but for you, if you are not picky and just want to literally watch this movie, then, you can have expectation on it, at that time, you can share it with your friends together after converting it to your iPad or other devices with mac dvd ripper, this classic sequel definitely can let you have a great time.

Top 3 Multi-Player Games for iPhone

There are so many multi-player games for your iPhone in App Store, so it may be hard to choose which one to play, well, as a faithful game player, here are my favorite multi-player games, you can check out if you like. And if you want to transfer these games or other stuff to your computer to share it with friends or others,

iphone to pc transfer
can help.

1. FIFA

If you are a football fan, FIFA is the best multi-player game

for you, and nothing is more interesting than a football game (just personal preference), take FIFA 12 on the iPhone, for example, with its new control system. While it may include a virtual direction control and buttons for shooting, passing, etc, it also offers some swipe controls, double taps, and player selection by just touching them. And free kicks are now taken in a sort of Flick Kick Football fashion; you swipe through the ball to send it in the direction you wish from a 3D rear view.

2. Fruit Ninja

It's the most interesting fruit game ever. Here are the tips for you to gain more achievements.

Cutting the pineapple 3 times in a row

What you need to do is wait until two in a row fly up then wait and pray that there's a third. If don't want to cut the fruit then move on.

Lovely Bunch Achievement help

To get the "Lovely Bunch", you need a combo of 6 coconuts in Zen Mode (may also be achievable in other modes).

Year of the Dragon Achievement help

For the special fruit secret, you play classic mode and eventually a big fruit will fly across the screen from left to right. Not only will you get the achievement but you will also get 50 bonus points. For the secret ones, you have to get 0 fruit, 69 fruit, 99 fruit, and you have to get your exact high score, then you just let yourself lose.

3. Infinity Blade

An iPhone game with graphics as good as any classical PC or console game. Infinity Blade uses Unreal Engine 3 to give you some of the best graphics available on a mobile game. Infinity Blade is a sword fighting action game. You can use the Gamecenter multi-player to play a match against available online players. In the multi-player mode, one player is responsible for controlling the main hero of the game, hacking, and slashing by swiping fingers across the screen, while the other player controls the main monster bosses who also control weapon slashes by swiping their fingers across the screen. The goal of both - kill each other.

These games generally can be played in all iOS devices, iPhone, iPad and iPod Touch, but I only have iPhone 4, and sometimes it will have serious problems when I playing games or

doing other things, so it's really necessary to know how to restore iPhone 4, and if you have the same problem like me, you should know it, too, because when you utilize your devices too much like playing those games all the time, the damage is inevitable.

Happy Feet 2 The Best Animated Film for Christmas

Among all kinds of movies that released before Christmas, "Happy Feet 2" is the best one that can let us experience the happy atmosphere of Christmas (I think). After the smash hit of "Happy Feet", the sequel "Happy Feet 2" returns with a high box office in its debut, just be inferior to "Twilight 4 (Part1)".

Mumble, The Master of Tap, has a problem because his tiny son, Erik, is choreo-phobic. Reluctant to dance, Erik runs away and encounters The Mighty Sven-a penguin who can fly! Mumble has no hope of competing with this charismatic new role model. But things get worse when the world is shaken by powerful forces. Erik learns of his father's "guts and grit" as Mumble brings together the penguin nations and all manner of fabulous creatures-from tiny Krill to giant Elephant Seals-to put things right. It proves that a lot of love, along with a little help from your friends, can go a long way. Ok, it has a deeper meaning, although as an animated film, we can't expect more, honestly, it's a good film though, you can convert the DVD version to AVI with

dvd

to avi converter freeware if you would like to watch the high definition DVD on your portable devices.

In a major subplot, Matt Damon and Brad Pitt voice two chatty krill. Their journey to move up the food chain provides a few funny moments and the most spectacular visuals, including krill swarms, a whale attack and jellyfish encounters. But their rather-nonsensical quest isn't well-integrated into the main story. There are several

pop remixes, of course, and songstress Pink (as Erik's mom) shows off her vocal chops, even as she reveals a limited acting range.

The real-world Antarctica and Southern Ocean consists of a wide range of species, and in Happy Feet Two we get to see a bit more variation in these represented. As mentioned earlier, krill is more prominently featured, and so are the elephant seals. Several different penguin species can be seen as well - all well animated and lifelike. The Happy Feet Two movie opened up in US movie theaters on November 20th, 2011 and scored \$21.2 million dollars in its opening weekend.

The sequel told how one little penguin rallies his colony trapped by shifting ice due to climate change. Someone says it looked like "just more of the same," instead of something compelling and new. However, if you have kids or you just like it yourself, it's not bad to pass your time with it, after all, it's a music movie, so it will be much fun to rip it to your iPad or iPod with dvd ripper for mac and watch it whenever you want.

Even though it has a great box office, for most of us, it is just a sequel that has no new themes and just wants to make us have a good mood in Thanksgiving or coming Christmas, well, it has achieved that goal, ignore those drawbacks given by critics, it is a good movie which filled with laugh and music.

Are You One of Apple Users Who Can Not Download Apps with iOS 3?

What would you feel if your iPhone or iPod touch can't download apps any more? Angry? Well, this problem may be the hottest topic right now. More and more iPhone and iPod users have complained that they can't download any app right now, what's going on?

"Whenever I go into a specific app in the app store, none of the buttons work properly," Apple user mwiesner wrote in the Apple forums. Specifically, he said an app will not download once you click the price, the ratings button is inactive, and photos do not appear, among other things. Actually, we will meet lots of problems when we use iDevices, the battery issues, now the update issues, so it's very important to know more about how to make the most of your iDevices like iPod. For example, how to backup the files in iPod so you won't lose them? When that problem comes to you, you should know that you need an ipod to computer transfer to help you backup. Well, that's not hard to fix, but this time, this update problem really peeves somebody. Here are the reactions from Apple users, they are serious and I guess Apple should take this problem seriously, too, however, Apple hasn't responded any comment yet.

"I had no problems downloading apps on my iphone through the appstore a few days ago...
I can download apps on my PC and push them to my iphone...
I have plenty of free space and icon positions/pages for more apps on my phone...
It's just the app store on my iphone that NO-Longer works!"

Here is another user who is from France, no doubt, this is an international issue.

"Just to tell you all that I'm using a 3G under 3.1.3, can't update it because of my company rules, and App Store is a broken link for me too (same issues as described before). I'm in France," wrote one user.

Ok, there is a solution though, if you can't download apps with your iDevices which are running iOS 3, why not update it? Then everything will be fixed. Oh, really? Maybe we should hear what this guy said.

"I know...upgrade to OS 4.x....I would but everything I read says that the iPod is basically useless after the upgrade as everything is too slow," wrote another. And update is risky, if you do that, you will lose everything you already have, songs, movies, files in your iPod, everything, of course, if you know how to transfer music from ipod to computer, then you won't lose

nothing, but generally, we all don't want to update it, unless we have to, especially the problem is caused by our own mistakes, however, this time, we have nothing to do with it, it's all because of Apple. This is definitely an issue on Apple's side which Apple must resolve.

Are you one of them whose iDevice have been stuck with its older OS, can't run iOS 4 or iOS 5, can't update it, can't download any app, and Apple hasn't give you a resolution, do you feel you can't do anything about it? Let me know.

Top 5 iPod Apps You May Have Missed in 2011

It's not easy to choose a few good apps from vast apps library, and now 2011 is almost ended, do you know what top-rank apps you have missed during the year? Well, here is my collection of the best apps for iPod touch, you may want to try some.

1. Tiny Tower. Maybe Tiny Tower is not your cup of tea, but trust me, it's not that easy to play, if you really want to get over it, you need to know more tricks, and find out the knacks yourself. Tiny Tower puts you in charge of a residential or business block of towers; you can build and furnish additional floors to attract "bitizens" (residents) and then manage their daily affairs (much as in SimCity).

2. Djay. Djay is a virtual, touch screen DJ setup with a realistic turntable and mixer interface that lets you mix, spin, cue and scratch your tracks straight from your iPod music library. Users can take full advantage of the djay app's Split Output mode to cue upcoming songs through their headphones, independently of the live mix that is sent through the speakers. This is the perfect solution for DJs on-the-go using headphones to preview and prepare the next song to ensure the audience can groove seamlessly to the playlist. The DJ Cable offers a unique experience for beginners and professionals alike turning any social event into the ultimate dance party.

3. Instagram. It's not as good as the iPhone's shooter, but

it's certainly good enough. The Instagram app lets you apply cool filters to make your photos look old, or edgy, or like a Polaroids, and then share them on the Web. It's a great, fast way to get your photos out there and see what other people are shooting.

4.

ipod to computer

software. Maybe you don't need it often, but when you have this kind of needs, for example, you want to back up your files from iPod to computer, this is what you need. iTunes can help us sync files from computer to iPod, but it can't help us do the opposite thing, so to make the most of your iPod, you definitely need this.

5. Snapseed. Snapseed is a popular photo editing app. First off, it uses gestures, which are well-explained within the app. It contains all the basic editing functions like crop, rotate, and the ability to adjust brightness, saturation, etc. You get a number of filters and frames to enhance your photos. You can always check back to compare your altered photo to your original one. Save your finished creation to your camera roll. Print and/or share directly from Snapseed to email, Facebook, or Flickr if you like.

These are what you've probably missed in the past year, but that's just the tip of the iceberg, there are much more that you may don't know, like

how

to get music off ipod onto computer, I can tell you, if you know more about these tricks, you can have the biggest fun with your iPod.

How to Transfer Music from iPod to Computer

Now it's the happiest time during the whole year, we don't have to work, don't have to go to school, just settle down and enjoy the great moment with family and friends. When you hanging out with your friends, what do you usually do? For me, I will share my

favorite music and videos in my iPod with my friends. If you would like to do that too, I can share my personally experience in this great time.

We all that we can just share our files in iPod with friends directly, we have to transfer them to a third-party tool first, like our PC, you know you can do anything you want on your PC, so, if you know how to transfer

music from ipod to computer, then it won't be problem to share the music with others. But among all those gadgets in the Internet, which one is the best? If you Google it, there are millions results you can get, you will feel a litter confused to decide which one to use. After my compare, I believe what I am using now is the best one.

You need to make sure that you have installed iTunes on your computer, then run this ipod to computer program, and you can manage your ipod device with no problem.

Step1. After your iPad/iPhone/iPod connected to pc, Launch the program you will see the right UI. Normally, the program will search the device automatically. If the device is enabled, the music will be shown in the list.

Step2. Choose the list and files you want to transfer, Click the Export button.

Step3. After you clicking the Export button, the following window will pop up, you can choose transferring to computer or iTunes directly. You can set the output folder at Advanced->Options before transferring.

Step4. When the transferring finished, the following window will pop up. It shows that how many files have been done. You can click the OK button to view the output files.

It isn't that hard, right? This trick is not just can be used when you want to share things with your friends, there are more situations that you can use it, for example, you decide to replace all your files in your iPod with new things but you don't want to delete them because there is a chance that you still want to recall, when that happens, this transfer can help you backup all your files in iPod onto your computer, sometime you would like to listen that old song again, just sync it to your iPod, so there is no need to buy it in iTunes one more time.

Except for music, there are so many things that you can share with your family and friends, like photos that record the precious time in the past year, which have important meaning for you, I believe when you watch those pictures with your friends together, it will be very lovely.

Top 5 Apps for iPod Touch

The brand new year is coming, are you ready to increase new apps from your iPod touch? Among all those apps, do you know which one is what you can't miss? Here are top 5 apps for your iPod Touch, maybe you want to try one or more.

1. Cut the Rope: Holiday Gift. A quick synopsis of the idea is candy is suspended above a green monster of some type named Om nom, and it's your task to cut the ropes holding the candy in order to deliver it to the little guy. Of course, nothing in life is simple, or at least not in games, since that would take the fun out of things, so there are three golden stars to collect in each level as well. Of course there are various other objects that need to be used in order to achieve your goal, some of which will be familiar to those that played the original (bubbles) and some new (stockings), but each is explained in turn.

2.

free

ipod to itunes transfer. The reason that I recommend this app is simple, I have seen many questions about how to transfer files from iPod to iTunes or computer. The reason is obvious, because iTunes doesn't provide us the function to backup stuff of our iPod to other devices, but we have that demand sometimes, for example, when we have a new laptop, everything in iTunes will be gone, but we don't want this, so with this app, we can transfer the music and movies etc from iPod to our new computers.

3. Camera+. The great thing about Camera+ is just the sheer number of options you have. You can of course use auto-focus and auto-exposure when taking pictures, with the ability to lock in the focus so you can adjust exposure easily, take pictures with

front or rear cameras, and use digital zoom. As well, there's a stabilizer option so you can take steady pictures, a timer so you can take photos on a delay, and a very cool Burst feature that lets you continuously take pictures as you hold down on the camera button.

4. Fruit Ninja. Fruit Ninja made a splash (or was that a splatter?) this year in the App Store sales charts, and it's a must-try for casual and serious gamers alike. Let's see how people appraise it:

"It's simple, fun and best of all challenging." - Touch Arcade Review

"Fruit Ninja is fun, fun, fun. It's an instant pleasure." IGN review

"The low price makes the game more than worth it." - TUAW Review

"Fruit Ninja is the sort of game that has come to typify the rising dominance of quick, simple and most of all additively fun gameplay." - AppSpy Review

5. Words with Friends. Zynga's addictive Scrabble clone allows you to play multiple turn-based games simultaneously with up to 20 friends. Words With Friends also allows you chat with your opponents, that's unexpected.

All these apps are the most popular ones among vast library, of course, there are more out there, such as transferring music from ipod to computer, you can check out which one you have missed.

Flurry Announces the Statistic of App Downloaded in Christmas Week Over One Billion

Do you know how many app downloads in Christmas week? 1.2 billion, Can you imagine that? What a zillion! However, that's reasonable, when you get iPod, iPhone or iPad as the Christmas present, what's the first thing you want to do? Download your favorite apps of course, not to mention Apple released so

attractive promotions among Christmas.

Flurry claims estimates that 1.2 billion applications were downloaded during what it calls the "holiday power week." It also believes that more than 20 million iOS and Android devices were activated during the holiday period. Seriously, I don't know if you have made your contribution to that statistic, but I did, I can't remember how many apps I have downloaded on my iPod touch, transferring previous apps, videos, songs to my PC with ipod computer transfer to save space for the new apps. Maybe you have done the same thing, maybe you are one of the biggest contributors of App Store's income.

Whether you accept that methodology or not, the premise behind the 1.2 billion downloads seems sensible. iOS devices (and their Android counterparts) probably found their way on to many a holiday gift list this year. While you'd expect to see a burst of downloading on Christmas day immediately after presents are opened, new device owners are unlikely to confine their App Store shopping sprees to a single day. Existing device owners are also busy cashing in their App Store gift cards on new software. And since smartphones pose a gift-giving challenge thanks to contracts with wireless carriers, there's also the prospect of new iPhone owners activating their devices in the days after Christmas for adding further fuel to the downloading fire.

While Apple does not formally release data about the number of devices being turned on for the first time, Google has confirmed that over 3.7 million Android devices were activated on Christmas Eve and Christmas Day. Since Android has such massive amounts, you certainly can imagine the situation of iOS, which is definitely bigger than that. Think about how many Apple users out there? iPod, iPhone, iPad, almost everyone has one of them, especially iPad, which is the most wanted thing in Christmas gift list, and if you are an iPad user, here is a trick that you must know, which is

how

to sync ipad 2 to computer, so that you won't lose one thing that you don't want to lose in your iPad.

The United States accounted for 42.3 percent of the total with 509 million downloads, followed by China with 99 million, The U.K. with 81 million, and Canada with 41 million. New device

activations played a role in the record breaking app download numbers. Flurry's estimates put the total number of iOS and Android devices activated during the Christmas week at 20 million, and the company expects those numbers to continue to climb.

Now the Christmas shopping season is almost going to end, but Apple's promotion just begins, it will releases Red Friday in Asia which begins from Jan.6, and it just gonna make that number becomes much bigger.

Are You the One Who Becomes Apple User on Red Friday?

If you hit Apple's official website this morning in twelve o'clock, then you must notice that those Apple products were much cheaper than before, but what I said "you" just means consumers in Asia, especially in China, this promotion activity of Apple is called Red Friday, which aims to celebrate the Year of the Dragon in China.

So if you live in China, Taiwan, Thailand, Hong Kong, Malaysia, Singapore or the Philippines, you are one of the beneficiaries. Red Friday is similar to Black Friday in that you don't get to know what the actual sales prices will be in advance. So if you're in one of these countries, and you're looking for an Apple bargain to start the Year of the Dragon, head over to your country's Apple store quickly, because this promotion just has one day, if you wake up in the morning the second day, you won't stand a chance.

As for discounts, most products, including iPads, MacBooks, and iMacs appear to be on sale for in between 5% and 10% off. In Hong Kong, Apple is offering discounts of roughly 8% on Wi-Fi iPad models across the board, while 3G-capable models are seeing slightly smaller discounts of 6-7%, if you finally decide to buy an iPad 2, you must know how to

sync

ipad 2 to computer, trust me, you will meet this demand after you having an iDevice.

Usually, Mac is too expensive for most of us, but you really want one, right? Don't say you still can't afford it after discounting, even if it's true, you shouldn't have a second idea, because you will never have another chance to get one that is cheaper like now. Apple is offering a flat HK\$ 770 discount on all MacBook Air, MacBook Pro, and iMac models. That discount translates to a 10% discount on the low-end MacBook Air, decreasing to 4% on the high-end MacBook Pro. There are also discounts on all mobile devices, home computers, wireless keyboards and other computer accessories, speaker systems, cases and software.

And if you have been looking forward to an iPod touch for a long time, this is your chance. The iPod touch is seeing approximately 10% discounts on all models, so get your chance and take one, after you become an iPod user, there is a trick you need to know to make the most of your device, which is how

to transfer music from iPod to computer. Ok, back to the promotion, the iPod nano is seeing a flat HK\$ 80 discount that equates to an 8% discount on the 8 GB model and a 6.7% discount on the 16 GB model.

Apple has seen major growth and adoption of its products in Asian markets, particularly in China, and is looking to expand its reach by conducting sales and announcement of products internationally around key dates in the Asian calendar.

But no matter what their purpose is, to make money or dominate Asia market or whatever, as fans of Apple products, we just want to have more chances like this.

How to Transfer eBooks from iPod to Computer?

Almost all portable devices can be used as e-Readers, iPad, iPhone, iPod touch, Kindle Fire or other smart devices, of course, the most famous e-Reader is Kindle, which is for sure, it is designed specially for us to read eBooks, and that's it, we barely can do other things on it, so why not choose iPod touch as your e-Reader? Because reading eBooks on iPod touch is easy, and

you can do more other things on it, like watching movies or something, which hardly can be done on Kindle.

But why iPod touch? How about iPhone or iPad? Well, we all know that they are more expensive than iPod touch, so I guess iPod touch is our first choice, at least mine. However, we can't transfer eBooks from iPod to computer or other devices, not with iTunes, what should we do when we need to? Actually, it's easy to achieve, what we need is a good third-party software.

After figuring out what to do, the next thing is to choose a best tool, there are a bunch of programs out there if you just Google it, they all appear to do similar things and make similar claims, so how do we decide which one offers the best combination of features, speed, and price? Lucky you, there is no need to try a dozens of software, because I have done the work for you. After all the tests about so many gadgets, finally some of them can do the good job, which is this

iPod to computer

transfer, it is different from other software because of its new function, it can copy purchased songs/movies/podcasts/eBooks from iPod to computer. Now we should begin to learn how to transfer eBooks from iPod to computer?

Step 1: Start the software and then connect your iPod touch to PC via USB cable. Wait for a few minutes till your iPod have been detected by the program.

Step 2: You will find an icon called "Books" on the left pane, click it and the purchased books will be appeared on the main interface, select the books that you want to copy to PC by ticking the boxes next to file names.

Step 3: Click "add" button to start copying. After your books have been properly copied to computer, it may take a few minutes to finish the file transfer.

This is just a little trick to tell you how to make the most of your iPod, because iTunes can't help you with that, so we need to find another way, the same with iPad, if you have an iPad 2, when you need to backup all your files in your iPad, you need to know how to

sync

iPad 2 to computer, then no matter what you have in your iPad 2, there is no problem to transfer them to your computer or other devices.

How to Copy Ringtones from iPod to Computer?

We both know that iTunes can't allow us to transfer files from iDevices to computer or other devices, that's a little annoying, especially when we have this demand. For example, what would you do if you want to transfer ringtones from iPod to computer?

You must have a bunch of great ringtones in your iPod, but bad things always happen, like your iPod will be damaged or you just delete the files in your iPod by accident, in that case, your money that cost on those songs, videos and games is just wasted, you don't want that. So it's very necessary to transfer your files like your favorite ringtones from iPod to computer to backup, as long as your computer is OK, you won't lose them unless you want to. And there is another situation, if you have a new laptop, everything in iTunes will be gone, but you still need them and don't want to pay for them twice, there is only one solution, which is to copy everything from your iPod to the new laptop.

If you have an iPhone, don't you want to have a unique ringtone? Of course you do, with the help of ipod

to pc transfer free, you can just transfer the ringtones from iPod to iPhone, so there is no need to download them again. This transfer can easily transfer podcasts from iPod to computer, it also can manage your iPod as a portable hard disk, find what you want quickly by filter and quick search function. This prominent software can keep the nice quality in the transferring, so you needn't worry about that.

Step1. To copy podcasts from iPod to computer, first you need connect your iPod to your computer via USB cable. Then install and run the transfer. After done, the files will be shown on the main interface as below.

Step2. Click "Ringtones" icon in the iPod list to open iPod ringtone folder and check the ringtones in it. You can select any ringtones as you like. Turn to the top toolbar, press "add" button to start copying iPod podcasts from iPod to computer.

Easy, right? If you would like to, it also can help you copy

movie from iPod to computer, nowadays, more and more people choose iPod as the multi-media player, I mean why not? It's considered as the mini iPad or iPhone without phone, and more importantly, it's much cheaper than other Apple products, of course, I'm talking about iPod touch. When we are outside or just not convenient to use a computer, it's pretty fun to watch movies with iPod, but some people are not satisfied with its small screen, they prefer to use the computer which has a bigger screen, of course, if the computer is available, watching movies on it is much better than on iPod, that's for sure, you just need to transfer them from iPod to computer.

Now you know how to transfer your files from iPod to computer?

It's a protection to your purchased goods in your iPod, so you don't want to miss this.

5 iPod Touch Apps that You Can Not Miss

What conditions should an app meet so that it can be called as a good app for iPod touch? Firstly, it must be able to work without Internet, because we all know Wi-Fi is not so popular. Secondly, it must be interesting, after all entertainment is the primary characteristic of iPod Touch. Why do you want an iPod touch? Just to listen to music? Of course not, music, movies, games, entertainment, any of them is indispensable, but how? Well, that's what those apps used for.

1. Line 2. People always say an iPod touch is an iPhone without phone, well, not any more, even though it can't be used as a phone originally, but with the help of some app, like this Line 2, everything is possible. You can assign a real phone number to make calls and send and receive text messages over Wi-Fi. It costs \$9.95/month to make unlimited calls (after a free trial), and if you're offline, you can set Line2 to automatically forward to a different phone.

2. iPod to computer transfer. Somehow, we need to transfer files from iPod to computer, and we know that iTunes can't help us with that, so a third-party tool is essential, with this

ipod

to computer transfer free, we can backup our files in iPod in case losing them, and also, when we change a new laptop or lose everything in our computer, we can move those songs, movies, apps, games etc from iPod to PC, so we don't have to buy them twice, which definitely will cost us a lot of money, so obviously, this tool aims to protect your iPod.

3. Dropbox. The eternal theme of iPod touch application eternal theme is to work perfectly no matter offline or online, well, Dropbox is a great example, you can always access your files, or download them to your iPod Touch, also send your own content to other people. When you are not with your computer but have an emergency on work, it is your shwd.

4. VLC. Playing videos and audios is not iPod touch's strength, unless you install VLC, it can play almost any type of file. You can sync videos or audios to your iPod touch via iTunes, if you don't want them in your iPod any more but don't want to delete them, you can

transfer

movie from ipod to computer, of course, if you think they are worthless to you, you can just delete those files in the iPod directly.

5. Radio. Except for iTunes, Radio is the best way for iPod touch to play music. You can access its music jukebox, play singles, album or playlist. You can also download music to your iPod, as long as you subscribe to Radio (free trial \$ 9.99 / month), even offline you also can listen to songs.

So these apps refer to almost every aspect of our lives, entertainment and work etc, they can make our lives more colorful.

Why Are People So Obsessed with iPod Touch

iPod series is not Apple's favorite in current time even it did change the traditional music mode and the whole music

industry, because that happened about ten years ago, people are not attracted by iPod nano, iPod shuffle any more, not like before. However, that's exactly why iPod touch is still chased by Apple fans and the amount of iPod touch users is keeping increasing.

Considering iPod series' contributions, Apple doesn't want to give it up. After all, it was iPod who saved Apple inc. ten years ago. But time is changing, people pay more attention to iPhone and iPad, it seems like iPod nano and iPod shuffle are outdated just like another players that weeded out because of appearance of iPod. So Apple has to figure it out how to save iPod, the result is iPod touch, which is called by Apple person "iPhone without phone". It's easy to understand, iPod touch has the same functions as iPhone, it's just users can't make a phone call with it, literally.

Whatever apps that can be run in iPhone, they are available on iPod touch too, no matter all kinds of accessories or games. Moreover, there are many especial tools for iPod touch, such as ipod to computer software, which is designed specially for iPod touch users to protect the files in iPod touch in case deleting them by accident. Compare to iPhone, the biggest advantage of iPod touch is the price, we all know that it's much cheaper than iPhone. To enjoy the same experience with cheaper price, who won't want it?

The latest iPod touch models have two cameras, one on the front and one on the back. They can make Facetime video calls to other current iPod touch devices, iPhone 4 handsets and Macintosh computers running Mac OS X 10.6.4 or later. The camera also gives you the chance to capture and edit HD video using your iPod touch. The mp3 player now has a retina display with four times more pixels on the screen than previous iPod touch models.

If you are new Apple user, you hardly can distinguish the iPod touch and iPhone just looking at the picture, what I said iPod touch is "iPhone without phone" is not totally right, because there are many apps can help you turn iPod touch to iPhone, like Skype, which is the most familiar video chat software for us. Of course, the features of iPod touch are more than what I listed, if you decide to own one, you should know how

to transfer music from ipod to computer, because maybe you will delete these files in your iPod touch by accident that have cost you lots of money, so it's better to make a backup to other

devices.

Most of us can afford an iPod touch, so for those people who are really obsessed with Apple devices, iPod touch is the first and best choice. Even iPhone and iPad dominate the headline of all kinds of news, but you can believe that Apple has further expectations on iPod touch, so more benefits will come to iPod touch users.

Top 5 Apps for iPod Touch

Here I have picked top 5 apps for your iPod touch. These apps are very comprehensive, I mean you can use them for pleasure or work, and some of them can protect your files in iPod touch. It's not easy to find the best apps from the vast app library, because there are so many, everyday there are new apps will show up, so here I have done the work for you, you just need to try them and have fun.

1. GoodReader. If you just search the eBooks reader in App Store, there are millions of results will show up, and trust me, you hardly can decide which one to choose, so here, according to my personal experience, GoodReader is the best one I can find so far. It adds iCloud support in iOS 5. You can copy or move files to the new iCloud storage folder; they'll then sync to iCloud, becoming accessible across multiple iOS devices. And AirPlay integration lets you stream audio files.

2. Find My iPhone. This is a sort of security app, you can see that from the name. But it not just serves for iPhone, it's also available on iPod touch and other iOS devices. There are many reasons that you may lose your Apple devices, because of the thieves or your own carelessness, so this app is designed for locating lost iOS devices, if the bad thing really happens, this app can help you find your iDevices back. But to be honest, I haven't tried this app, and I hope I don't need to try it.

3. iPod to Computer Transfer. Now we are talking about a very useful tool for your iPod touch, imagine this, if you buy a new

computer, do you want to buy those songs, videos, apps or games for the second time? I mean no one would like to do that, but you still don't want to lose them, right? So this ipod to computer transfer is designed to fix this problem for iPod touch users.

4. Facebook. Ok, you don't want to hear my rubbish to describe this app, everyone knows it, right? I bet it's the first app you will install after buying an iPod touch or other Apple devices, so... is there anyone who forgets to download this app? No?

5. Gem King. Gem King is a brand-new game that makes good use of simple, but useful, iOS 5 features. In your gem-collecting quest, you can pick up where you left off playing on another iOS device, thanks to iCloud integration; you can use AirPlay TV mirroring to play on the big screen, too. You'll also find native iOS 5 Twitter integration, Game Center achievements, and leaderboards.

And if you are iPad user, those apps are also applicable for you, but to backup your files in iPad, you need know how to sync

ipad 2 to computer, it's the same thing with ipod to computer transfer. Now you have known five best apps for iPod touch and other iOS devices, it's time to enjoy.

Best iPod/iPhone/iPad Apps for Valentine

Everyone knows that it's the most romantic time in the year, boys, girls and couples are having their best festival ever.

Roses and lovely decorations are everywhere, also, lovers can choose one or two apps for iPod touch, iPhone or iPad to send love to each other or play the romantic apps with each other.

Here are the best apps for Valentine's Day.

1. TextPics-v2.3. This app that released by FTW Innovations is for iPhone users to text unique contents to other people. You can

design whatever you want, sent to anyone you want to. It's for social networking, so even it's not Valentine's Day, you also can use it, there are Over 1,000 customizable text art pieces and over 130 Western style emotes for texting to any phone, anywhere!

2. iPod to computer transfer. Do you have lots of pictures or videos in your iPod? Now on this day, you want to share them with your boyfriend or girlfriend, right? OK, that's a good idea, but how? Actually, it's easy, what you need is an ipod to computer transfer, which can let you transfer anything from iPod to computer.

3. Movies. Right, you probably know what I am gonna say. Watching movies on Valentine is kind of tradition, that's why movie companies release love comedies for this day. Movies is a free app released by Flixster, you can get all the latest romantic films here. It isn't great when you lying on the couch with your partner watching romantic movies? So if you need an app to find what to watch, go to movies.

4. Romantic Ideas. Don't have an excellent idea for valentine? Here is what you are looking for. To be honest, every year you have to prepare a big surprise for your lover, but those ideas are so stereotyped, no one likes the same "surprise", everyone likes something different. I bet most of us are very upset when we can't think out an idea to make him or her impressed, however, you don't have to any more, because someone can help you, with this app, you totally can get satisfying results.

5. Fingle. Maybe you think the relationship with him is not good enough, so do you believe that a game can do you a lot of help? Fingle is very different with other games, it requires two players playing on one device, is that reminds you anything? Now you believe it can promote the emotion between you and him, right? The beauty of this is it's bound to force a bit of hand to hand contact which can help speed up any inevitable chemistry, on top of the game, the music helps set, oh let's call it a sensual mood.

What are you waiting for? If you are outside, go download these fabulous apps to play with him or her, if you are at home, you can transfer

music from ipod to computer to share your favorite love songs with him or her on the computer. It's Valentine's Day, so you can do anything romantic you think to make him or her happy.

How to Get Apps from iPod to Computer

Have you ever wondered that how to get apps from iPod to computer? What I am saying is from iPod to computer, not from computer or iTunes to iPod. Of course you know how to sync things from iTunes to computer, as long as you are an Apple user, you definitely know how to do it, but not all of Apple users know how to do the opposite thing.

When you get an iPod touch, what's the first thing you will do? Downloading your favorite apps and games of course, like Angry Birds, Infinity Blade and Fruit Ninja. These are the most popular iOS apps right now, and they are paid, so maybe you want to save them in your computer, but the question is how?

iTunes can't help you do that, so if you just download a bunch of apps in your iPod and want to backup them to the laptop, you may feel upset because there is no way to do that directly. You need a third-party tool, there are a bunch of transfers you can find in the Internet, but it's not easy to find a good one. Just a few days ago, my computer broken, so I lost everything in my iTunes, but then I thought maybe I can transfer those apps from my iPod to computer, so that I didn't need to pay for them again, but you know, I just couldn't, and that's why I find out that we only can do that with the help of transfer.

Cucusoft iPod to Computer Transfer is an easy to use iPod utility designed to help you backup the stuffs in your iPod, like

transferring

music from ipod to computer. Recover lost or missing music, backup and restore all of your iPod content, including your favorite songs, videos, photo files and Play Lists, and that's not all. If you have any iPod device, this software is a must-have utility to keep your iPod safety. Of course, if you prefer the free tools, iDump or Floola, that's ok though, but you need to know that free things always have drawbacks, so if you

want the perfect functions, it's the best for you to use

Cucusoft. Here we can begin:

Step 1: Install the iPod to Computer Transfer on your computer, then plug your iPod in to the computer via USB cable.

Run the software and it will automatically show you all iPod files on the interface.

Step 2: Choose your iPod apps that will be uploaded to computer. Then mark the apps you need to upload to computer from iPod.

Step 3: Click Export button and then choose Export to Disk Only on the following form.

Now you know how to get apps out of iPod touch, and it's the same thing to transfer songs or movies from iPod, you just need to change the options.

With this

ipod

to pc transfer free, you can transfer whatever you want from iPod to computer. Like I said before, this tool aims to protect your iDevices. If you just buy an iPod, you'd better have this tool.

The Beatles Ringtones Are Available for iOS Users Now

The Beatles has cooperated with Apple before, they released their album in iTunes Store at that time, but they haven't done anything since then. After waiting for so long, finally they give us a big surprise, they launched in earlier time that their ringtones are available in iTunes Store now. And if you know the rick about

transferring

music from ipod to computer, you can remove the ringtones to computer in case deleting them by accident, after all they are precious.

They are 27 songs in total, and the 30-second ringtones are priced at \$1.29 each, don't try to figure out why a complete song

priced at \$1.29 but a ringtone only has 30-second also priced at \$1.29, I mean you wouldn't care, right? And you may have noticed the word "exclusive", which means you only can get those stuffs in iTunes Store, if you are not iOS users, I gotta say you have to use another way to get them.

The full list of available ringtones includes: "Love Me Do", "From Me to You", "She Loves You", "I Want To Hold Your Hand", "Can't Buy Me Love", "A Hard Day's Night", "I Feel Fine", "Eight Days a Week", "Ticket to Ride", "Help!", "Yesterday", "Day Tripper", "We Can Work It Out", "Paperback Writer", "Yellow Submarine", "Eleanor Rigby", "Penny Lane", "All You Need Is Love", "Hello, Goodbye", "Lady Madonna", "Hey Jude", "Get Back", "The Ballad of John and Yoko", "Something", "Come Together", "Let It Be", and "The Long and Winding Road".

The Beatles' music has been available in the iTunes store since November of 2010, but only after many years of negotiations. Though the band has since sold a huge number of mp3 downloads at the digital retailer, they may have waited too long to get in the ringtone business, as the market has been in decline since smartphones and ringtone-making apps have become more popular.

"It has taken so long to get The Beatles on iTunes, and for that reason, it feels like a bigger deal than perhaps it should be," said Stuart Dredge, an online music expert with Music Ally.

That's right, we really have been waiting for a long time, and you definitely don't want to lose them, so just in case, you'd better have an ipod

to pc transfer free, so if you do something bad things, you still can find them in your computer.

Speaking of The Beatles and their music, I bet all of us will think of Steve Jobs, because he had called the Beatles as his favorite band, and also admitted that he had learned lots of skills that also could be used in technology industry from this band. Even decades of years have passed through, the fans of The Beatles still all over the world.

If you like The Beatles, or just want to realize those inspirations from their music that had inspired Steve Jobs before, you can visit the iTunes Store and download the ringtones, maybe you really can learn something from these songs.

How to Export Audio Books from iPod touch to Computer?

Most

of us would like to download a bunch of audio books in our iPod touch. That's very convenient to listen to those classic masterpieces when we are outside, but if we want to share our all these works with friends or want to backup them to other devices, what should we do?

The

first and most important step is to choose a good transfer, for example,

ipod to computer transfer,

it's not easy to find a good tool to help us do a lot of work on your iDevices, it has many requires, like the quality, speed, of course and the price. Generally, this transfer meets all the demands, so what you need to do next is to follow these steps to transfer all your audio books to your computer.

Step

1: Once you connect iPod touch to computer, you will see all information about your iPod, such as Type, Capacity, Version, Serial Number, and Format that be shown on the main interface.

Step

2: Click "Books" icon under iPod list that you want to transfer. All these audio book files are shown in file browser. Choose the books you want to transfer.

Step

3: After you have chosen the books that you decided to transfer to computer, click Export button, and choose Export to Disk only to transfer to computer disk.

This

is about how to get books off iPod touch, and maybe some of you will say that what if I only have iPod nano, well, many users say that iPod nano is more appropriate to for audio books, why?

It

is amazingly tiny!

Fits in hand, pocket, wherever.

Perfect exercising companion

Beautiful and easily read color LCD - much easier than 4G

B&W

Does Photos

Shows cover art on downloaded books and music - kinda tiny, but center select button shows cover art filling LCD.

And

most importantly, iPod nano uses USB, so we don't have to transfer them via iTunes, that's more convenient, however, fewer people would choose iPod nano as the media player, after all, it has lots of limitations, so I guess most of us own an iPod touch not iPod nano, if so, we need to learn how to transfer audio books from iPod touch to computer with

ipod to computer transfer

free, it's very important for us to protect our resources.

Speaking

of the audio books, we all have our favorites, but you shouldn't miss these great works, like Gulliver's Travels by Jonathan Swift, The Adventures of Sherlock Holmes by Sir Arthur Conan Doyle, Mansfield Park by Jane Austen, The Call of the Wild by Jack London, Captain Blood by Rafael Sabatini, Romeo and Juliet by William Shakespeare, Pollyanna by Eleanor H. Porter, Don Quixote by Miguel de Cervantes Saavedra.

It's

a very good habit to back up your favorite files, no matter these audio books or other stuff, like songs and movies. All these audio books I have mentioned are free, if you just delete them by accident, you can download again, but if you download paid audio books, you won't want to lose it, so it's very necessary to backup them.

Will iPod Touch 5 Still Come to Us?

Who is talking about iPod touch 5? No one? Why? I mean before the third generation iPad and new Apple TV or new iPhone being released, the whole world is talking about them, but now, have you heard anything about the new iPod touch? Not really, so the first thing we need to do is to have a very clear understanding

of iPod touch and believe that iPod touch 5 will come. iPod touch is much cheaper than iPhone or iPad, but it has almost the same functions. Since its release, the iPod touch has become a popular portable media player. Its sibling iPod models specialize in audio and video playback, which is great if that's all you need. The iPod touch goes beyond that, including two cameras, wireless networking, built-in applications for e-mail and Web browsing and the option to install many of the thousands of applications available through the App Store. To protect the apps in your iPod touch, there are many tools being designed for iPod touch, like ipod computer transfer, you just need to transfer files from iPod touch to computer in case losing them.

The iPod touch's home screen also looks like the iPhone's. When you touch a capacitive surface, the amount of charge it holds changes. This is why devices like the iPod touch require you to touch them with your bare skin -- insulating materials like gloves, pens and styluses don't cause the same changes in the capacitive circuitry. Regardless of which method the screen uses, you change the electrical properties of the screen every time you touch it.

When comes to business usage, generally, people go to iPhone and iPad. This is not fair, because iPod touch can do the same thing. The iPod touch supports the same OS (iOS 5), multi-touch-driven interface and apps ecosystem as its brethren. It hosts FaceTime meetings; with some effort and some software/hardware additions, there are ways to make the device place calls. Straight out of the box, the iPod includes the Safari browser, Calendar, Mail, Reminders for to-do lists, Contacts and Notes for email-synced note-taking.

The iPod touch grew in popularity in its first three years, and it came close to outselling the iPhone in late 2009. The Apple iPad, introduced in early 2010, does most everything the iPod touch can do, but on a larger device with more features. That's when people start to worry about the future and fate of iPod touch, but that issue has been talked about for a long time, right? See what has happened to iPod touch? Nothing, except iPod touch is becoming better and better.

Now you know why you should pay attention to iPod touch 5, logically, iPod touch 5 will meet us this year, even there is no news about it, but we should believe that it will not disappear. If you are handing an iPod touch right now, you should know

how

to transfer music from ipod to computer, that's a very important tip for all of you to protect your devices.

Is Apple an Important Part in Your Life

Do you like to show off your mobile phone especially when you are an iPhone user? Do you take your iPod with you when you go out? Do you always see other people playing Angry Birds or Fruit Ninja on their iPads in subway? Well, you know what I mean, Apple devices have been a very important part in our lives.

The New iPad has been released for a few days, what's the situation right now in the whole world? Do you know how popular it is? The new iPad is already available in the US, Australia, Canada, France, Germany, Hong Kong, Japan, Puerto Rico, Singapore, Switzerland, UK. Apple's retail stores and select Apple Authorised Resellers, including Austria, Belgium, Bulgaria, Czech Republic, Denmark, Finland, Greece, Hungary, Iceland, Ireland, Italy, Liechtenstein, Luxembourg, Macau, Mexico, The Netherlands, New Zealand, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain and Sweden.

Someone says there is no big difference between the new iPad and iPad 2, really? Here is an experiment to show that new iPad is better than iPad 2 in some ways. But there isn't necessary to buy a new iPad if you already have an iPad, and you should know how

to sync iPad 2 to computer to protect your iDevice. To figure out the advantage of new iPad, I take "The New York Times" as the example to make a comparison. Images look about the same, though primary colors are richer on the new iPad. If you put a magnifying lens to the images, you'd notice the iPad 2 pics look a little pixelated compared to the same photos viewed on the Retina display. On the iPad 2, the color has a reddish tone; on the new iPad, it's more golden.

Then let's talk about iPod touch. It's much cheaper than iPad

and iPhone, but it has the same functions with them, almost. People always would like to use it to listening to music, to play games, to chatting. Those apps that can run on iPhone or iPad, they also are available for iPod touch, that's the difference between iPod touch and other iPod products. And there are bunch of third-party tools serve for iPod touch, like ipod to computer transfer, which is very useful for users to keep the device safe.

What about iPhone? Apple's mobile device dominance is not overstated, but use of new technologies like video chat and LTE is - at least for now, according to the results of the first Mobile Life survey, published by UBM TechWeb's Light Reading. The popularity of Apple devices is not just in developed countries like America, also in developing countries. Mobile analytics company Flurry reports that activation of new iOS devices in China has surpassed the U.S. for the first time.

It's not exaggerated to say that Apple is gonna take over the e- market of the whole world. Ask anyone in any country, what is the most wanted portable device? The answer must start with letter "i".

Revelation from the Challenge to Apple

The challenge to Apple has never stopped, and we all remember those MP3 players, Tablets and mobile phones produced by Microsoft, Amazon, Samsung, HP and Nokia etc, none of them succeeded, some of them ever quit from the market forever. So what have we learned from all these examples?

Just like what Michael Scott has said, "You can fight with myth, once it spreads in the Internet, it can't be changed." There have been numerous companies to challenge Apple's myth, the most famous is Microsoft's Zune challenges iPod, at that time, Microsoft was confident about the technical performance of their product, and they had plenty of marketing funds, but what happened after a few years? iPod is still the most popular MP3 player and iPod touch is becoming an essential part in our lives, we use it to listen to music, to play games, to watch movies, to do everything we can

imagine. We can transfer music from ipod to computer and even can make phone calls with iPod touch, so now you know how funny Zune wants to challenge iPod.

How does Zune stack up against the iPod? The general opinion is that Microsoft did all right, but maybe not quite enough to counter Apple's dominant grip on the MP3 player market. Zune handles all of the basics -- music, video, podcasts, apps, games and photos. The Zune and the iPod share many of the same features, including a touch screen interface and built-in WiFi. The Zune HD's screen is smaller than the one on the iPod touch -- 3.3 inches compared to 3.5 inches, respectively. The Zune HD also features an HD radio tuner, something the iPod touch doesn't have. But the demands of iPod are always bigger than other devices, as well as those accessories like ipod to itunes transfer free. So why would this happen?

Steve Jobs had commented on the causes of Microsoft Zune's failure, "When I grow older, I realize the importance of 'motivation'. Zune is a failure, because Microsoft does not love music and art like we, we win, because we love music from the heart. we produce the iPod is for our own, when you really do things for yourself, your friends or family, you will not give up easily, but if you do not like it, then you would not take one more step and would be reluctant to work overtime on weekends, you just only indulge in the status quo. "

The analysis of reasons why Apple succeeds from Jobs seems like have nothing unique. But in fact, Apple's unique value inherent in the attitude of excellence and depth of the potential demand of consumers to grasp. Jobs said he never did market research, never hired marketing consultant, he said: "You can not walk on the streets to ask someone 'what is the next great product?'"

So to me, the revelation is you can't just follow Apple and copy their products, what you need to do is to figure out why they produce these products, what demands have they seen from the market.

Next Generation iPod Touch May Feature A5 or A5x Processor

So after all discusses about the new iPad and new Apple TV, Apple continues to reveal a little information to seize people's attention, so what it is this time? Ok, here is a hint, you haven't heard about the update or any information about iPod touch for a long time, right? Now according to the news, new generation iPod touch is on the way.

9 to 5 Mac said that Apple is working on a new iPod touch. If you already have an iPod touch, you need to know how

to restore ipod without itunes, which is a very important protection for iPod touch. Of course, if you have more interests in the coming iPod touch, then you may don't need to care about much. The new iPod touch will come to us eventually, it just on one knows what it will be like, but there is one thing which can be sure, the processor. Obviously, Apple won't let iPod touch be the special one, we all now that the iPod touch is the only current-generation iOS product with a single core Apple A4 processor, all current iPhone and iPad models have faster dual-core A5 or A5x processor, so there is a big chance that Apple will update the processor in new iPod touch, which is just a common sense.

Some of us were really disappointed about the update of iPod touch in 2011, which was just the addition of a model with a white case. I mean every year Apple would release new iPod touch, but last year? That was really hurtful, why? Because it was the only iOS device not receive internal nor cosmetic changes last year.

If the guess about processor is true, the change of new iPod touch will not just add a new white model or anything facial. Until the end of the year, all iOS devices will run A5 or A5x processor, if this change won't appear, then Apple must lose its mind, you see, Apple is the kind of company that cares about consumers, at least that's what they said, so what consumers will say when they get a new iPod touch with A4 processor, while other

people are all using A5 or A5x processor, Apple would not keep the promise like this.

So according to a file inside of an internal iOS 5.1 build, the fifth-generation iPod touch Apple is working on is labeled iPod 5.1 internally. We haven't heard any specifics regarding the new iPod touch hardware, but the jump from 4.1 (the current internal iPod touch label) to 5.1 indicates major internal changes, at the very least. After all, the iPod touch is one of the most popular gaming devices on the market, and Apple's dual-core iOS device processors offer top-of-the-line graphics performance.

When we are waiting for the further information, we may just make the most of the devices we have right now, learn how to extract files from ipod to computer and others tricks, maybe also we can guess what's name of the new iPod touch.

Top 3 Free DVD to New iPad Converter for Mac

Many people are Apple users nowadays, some of them are very extreme, like they will buy every new Apple device, new Mac, new iPad, iPod and iPhone, even they already have a bunch of old devices. So my point is we have to admit that Apple devices are indeed very popular worldwide, any of us may have at least one iDevice, but do you really know how to make the most of your iPad like watching DVD movies on it?

For many Apple users who also are movies fans, I believe that you certainly know how to watch your favorite movies on iPad, at least it is the first trick I want to figure out when I have a new iPad, but not everyone knows how

to put movies on ipad, especially newbie, so here are top 5 DVD to iPad converter that can help us rip DVD movies to iPad.

1. Handbrake. It is not a strange tool for all of us, even you don't have Apple devices, you still may heard it before, what can I say, for many people, it's a very useful gadget, more importantly, it's totally free. But I know that lots of people are

not satisfied with this freeware, too many bugs, the quality is not good enough, the video resolution is a little low and so on, but generally, if you are not very picky and don't want to cost much money, handbrake is a good choice.

2. iSkysoft. This is a pretty famous brand in technology industry and it has lots of products, including dvd to ipad converter, which can convert DVD to iPad video and audio on your Mac directly. The default presets are the optimized settings for iPad with best video quality and sound effect, making the most of your iPad's big screen and HD feature. It is perfectly compatible with Mac OS X Snow Leopard.

But there is one thing you need to know first that iSkysoft products are not free, still they have free trail version though, but if you want to enjoy the completed functions, there is money you need to pay for. So you may wonder why not to choose the free tools like handbrake, just like I said freeware always has drawbacks, but paid ones, they need to be responsible.

3. Videora. I just think most people prefer to freeware not paid ones, so it's much wiser to introduce freeware. Just like Handbrake, Videora is a free app too, but I really don't know which one is better, if you want to choose one from these two, you'd better try them yourself, than can be used on both Mac and Windows. This freeware works similar as the Handbrake to convert all types of video files to playback on iPad/iPad 2 and the new iPad.

Among all these DVD rippers, you may want to try one or two. With a good dvd ripper for mac, it won't be a problem any more to enjoy DVD movies on iPad,

Whether the Involvement of Apple Has Reduced the eBooks Price or not

Just in earlier time, the DOJ accused Apple and a number of publishers of raising the price of e-books, but not everyone thinks that's the truth. According to the article from Wall Street, they think it's just because the efforts of Apple and publishers, the monopoly of Amazon has been broken.

Due to Apple's proxy mode, the competitive pressure from iPad and Barnes & Noble Nook has made the market share of Amazon fallen from 90% to 60% and price of eBooks also has more changes, which means consumers have more choice, ranging from \$ 5.95 to \$ 14.95, not just the Amazon standard-\$ 9.99. The article also pointed out that Apple charges a 30% profit in games and other applications, , the same with the ratio of eBooks, newspapers and magazines, so it's hard to let people believe that Apple raised the price of eBooks. The competition between Apple Amazon is not anything strange, they all protect themselves with one hundred percent efforts, generally if you have purchased a book or a movie from any of them, you only can play it on other device with

media

drm removal, we all have been through this kind of thing.

Apple is so different from Amazon, because it offers the service for consumers to read eBooks only aims to attract more people to buy iPad, just like the apps to watch TV shows and read magazines and work. So not like Kindle, users can do many things on iPad, like watching DVD movies with

best

dvd creator review, Apple really counts on eBooks to make money? To honest, iPad is just a device to read eBooks, it has nothing to do with the price with eBooks, let me tell you this way, the games we play on iPad, is there anyone think the price is not reasonable? No? Now you know what I mean.

As long as you are an Apple user, you would know that Apple's platform is a multi-use platform, offering Internet browsing, word processing, music, apps, and other products, of which books probably accounted-and still account-for a relatively small percentage of revenue. We can download everything we want in iTunes, even sometimes we are bothered by DRM protection, which means we need

mac drm

removal software to break it, but Apple has many options for promoting adoption of its platform-not least, the "sex appeal" of Amazon's famously glam products, as to Amazon, it's not

exaggerated to say that it competes largely on the basis of its content, and its devices sell only as long as the content is attractive and attractively priced.

Not just Wall Street thinks Apple has made a contribution to break eBooks' monopoly of Amazon, another article from Technology Liberation Front also says that Apple is fighting against the price standard of eBooks, but we can't be sure from its analysis that if the price really has been reduced, or Apple's "agency model" is really decided by the demands of consumers just like they said.

Haywire-The Most Weird Spy Thriller Directed by Steven Soderbergh You Have Even Seen

So I totally understand all the weird aspects in "Haywire", let me see, the actress is an athlete who I never know before, the co-stars are a bunch of Hollywood super stars like Channing Tatum, Ewan McGregor, Michael Douglas, Antonio Banderas, Michael Fassbender and so on, but the most interesting thing is many of them only have few scenes, I mean they are the most expensive actors right now, why they are willing to just show their faces in this movie? Because of the director, Steven Soderbergh or the plot is really good?

First, let's see what "Haywire" is about. Before that, if you have downloaded this movie with DRM protection, you may need free drm removal to fix that problem. Mallory Kane (Gina Carano) is a highly trained operative who works for a company that takes on extremely dangerous assignments that the government cannot authorize, while on a mission overseas, Mallory is double-crossed by her own agency and has to fight to stay alive while attempting to learn the truth about why she was the intended victim of an attempted murder.

Ok, pause here, the plot is quite clear and exciting, but you may wonder who Gina Carano is, and why I never hear about this name

before? Neither do I, and that's not our faults, after all, we don't watch MMA quite often, yes, Gina Carano is not an actor, at least not the kind of actor we think, she is a MMA fighter, and her on-camera experience has been limited to crushing the competition on NBC's American Gladiators, if you want to know what she looks like when she fighting with real fighters, you can download the videos and learn how to convert m4v to mp4 then enjoy them on your portable devices anytime anywhere, so why she just suddenly appears in Steven Soderbergh's movie? That's because Steven Soderbergh, the genius found her in Comprehensive combat tour performance.

After the actress, let's talk about those actors, Ewan McGregor-the former boss, Channing Tatum-the ex-lover Aaron, Michael Fassbender- a partner meant to be trusted by Mallory and Bill Paxton-the father, so do you want to know how it is going with so many big shots in the same movie? You can convert the DVD to your iPad (if you have one) with free dvd to ipad mac, and we can see one thing from this case, which is Steven Soderbergh has some kind of magic power to make so many big shots listen to him.

Some people say Haywire is the another version of The Bourne Identity, just the protagonist is a woman named Mallory, not Bourne, but there are few people agree with this opinion, the extreme idea is this movie is much worse than The Bourne Identity, so those people who have this idea may really feel pity for the actors who only count as figurants in this movie. But no matter what, this spy thriller which is directed by Steven Soderbergh and acted by so many great actors, we have no reason to miss it.

â??The Walking Deadâ?? Coming to iOS Devices very Soon

If you really love the zombie TV shows or movies, then you must know "The Walking Dead", it's not exaggerated to say that The Walking Dead is the first real Zombie theme TV show we have watched. The teleplay is adapted from Robert Kirkman's zombie

apocalypse comic book series, except for the TV show, The Walking Dead app for iOS is going to be released very soon.

Telltale Games finally has the first episode (out of five) for The Walking Dead, many game players who have tried this game all say it's very exciting and thrilling, so we iPad users can't help wondering when this game will come to iOS, luckily, Telltale plans to release iOS app this summer. The Walking Dead for iOS is set to be an adventure-style horror game set in the same grisly zombie-infested environment found in the television series and in the monthly comic series. If you know

how

to put movies on iPad, you can watch this TV show on your iPad before the game released, I think it's more interesting to play this game if have watched the teleplay before.

Telltale has released the trailer for the first part of the five part series, entitled A New Day, in the hopes that it will hold fans over until the application arrives on the App Store. In this episode, you'll play through a vehicle named Lee, a loosely defined character with a mysterious history and innocence about him. The opening takes place right before the world goes to hell. Lee is in the back of a police car, handcuffed, talking to the officer driving when, suddenly, the officer strikes a walker with his vehicle. The crash is a stomach-churning, and the action after is intense. Lee survives, but finds himself in a world where the dead shamble and the living sprint.

Speaking of the TV show, "A New Day" does take advantage of the episodic format and presents itself as an installment in a longer story. If you know how to convert

m4v to mp4, then you can upload the whole two seasons to your iPad, after watching the TV shows, you will be more familiar to play this game. You're warned at the start of the game that choices you make in this chapter might not have immediate repercussions, but could have impact on later episodes.

If you really want to play this game right now and can't wait for the iOS version, you can purchase the PC and Mac versions from the Telltale Games Online Store, as well as Steam and other digital distribution services. The first episode is also available for download now on PlayStation Network for the PlayStation3 computer entertainment system.

The TV show has been through a crisis before, it almost been cut, I guess the game will make audiences have more interests in the show. The truth is we all want to be a part of the story, the

scene and the violence, so let's just wait for it to come to iOS platform.

Best 5 Games for iOS Devices

New games continue showing up, so what are the hottest games in App Store right now? You know, except for watching ipad

movies, there's also a lot of fun to play games on iPad. Here are the top 5 games for iPad, some of them are available right now, but some of them are coming very soon.

1. Infinity Blade 2. After the release of 1.1, which is ClashMob, there are many complaints from players. Some achievement still can't be gotten even players have finished the conditions, so the developer updates 1.1 to 1.1.1 to fix the bug. According to the official statement, 1.1.1 also fixes other bugs that have been reflected by players, but as to the specific contents, they haven't told us yet. But there is also good news, which is Infinity Blade 1 is much cheaper right now, but it has time limitation, so if you want it, you need to hurry up.

2. King of Fighters i 2012. The best part is the addition of Wi-Fi play, which allows you to play in online ranked battles or challenge your friend in Friend Versus mode. The King of Fighters i2012 has also a training mode for us to learn how to play with the virtual arcade stick. There are also some sketches and illustrations to unlock. The price for the game is 800 yen. It supports English and Japanese.

3. The Walking Dead Episode 1. Yes, this is the TV show with the same name. I guess we all want to be a part of this adventure or disaster, it's more exciting than watching TV, and the developer knows this very clearly, so this iOS game will land on iOS devices this summer. While waiting this game, we can watch the whole two seasons of TV show first, to know better about the plots, this TV show has been released with DVD version, so we can

transfer

dvd to ipad to watch them.

4. The Island: Castaway. Stranded on an island, you will have to learn to fish and hunt for wild boars, catch snakes and find rare plants. But it's not all about staying alive. Explore the enigmatic island to find clues, solve over 200 diverse quests and decrypt ancient writings. If you want to come back to home, you must finish all these challenges.

5. Rock Band. Anyone who loves rock music, this is the best choice, which is priced \$4.99 in App Store. Rock the biggest playlist of songs by legendary artists. Plus - for the first time ever - let it all out on vocals with Vocal Recognition. You've never rocked it like this on iPad, iPhone and iPod touch. Play Free Songs from Real Rock Stars. Get the ultimate band experience on the App Store with up to 29 FREE SONGS from real rock stars.

These are the most popular games I have picked up for you, if you have missed one or two, you may want to try, consider the promotion of Infinity Blade 1 only lasts for a while, so you need to be hurry.

The Share of iPad Is Increasing in SMBs

With no doubt, the status of Apple in big businesses is incomparable, let's see, iPad is always the first choice when those companies decide to utilize Tablet as office supply. But Apple wants more than this, so they continue to extend their occupancy in small-to-medium-sized businesses, and they succeed. According to iGR, more and more small businesses begin to use iPad run business.

When individual plans to buy a Tablet, he only considers the price and fashion, which means iPad could be the first choice, when companies are ready to buy Tablets to run business, they also consider two things, price and functions. If they don't want to buy the newest iPad, then the price is totally acceptable, as to functions, we not only can download free movies for iPad to watch them, but also do lots of works in business, so the vast majority of those interested in a tablet only

want one -- the Apple iPad -- according to a new study by wireless and mobile market research consultancy iGR.

Apple has been trying to enlarge the influence in SMB, after all, that's also a big market, so Apple has to ensure that when those SMBs plan to buy Tablets, iPad will be the first product that comes to their minds. And I think the search result from iGR won't disappoint them. The survey, by iGR, shows that about a quarter (24%) of SMBs supply their employees with tablets as part of an official policy. While tablets are often positioned as augmenting laptops and PCs, 26% of the SMBs surveyed indicated their company would be buying fewer or far fewer laptops as a result of their tablet purchases, and iPad occupies a large share. Of course, 47% of respondents said they use their tablets for both business and personal reasons, personal reasons only can mean to have fun with iPad, like watching movies with dvd to ipad converter or playing games.

Then why do SMBs focus on Tablets more often? The most reported reason for purchasing additional tablets in 2012 was "substituting for laptops" (31.9%), followed by "workforce is increasing" (31%). 55% of SMBs managed and maintained tablet devices, so this is definitely good news for Apple. But the change is not easy to make, even iPad has been used in many industries, including schools, governments, airlines and so on, but to make it become the main tool in business needs more time, the majority of companies with plans to buy tablets indicated that their plans to purchase notebooks remained about the same. IT departments surveyed were likely to oversee the purchase, management, maintenance and support of desktop computers (90%), and laptops and netbooks (89%).

Even the situation is very tough for iPad to dominate small-to-medium-sized businesses, but the opportunity is still there, it's just Apple needs to try harder and uses the different marketing mode, like Lion Server, which is a very good method, if Apple can think more good ideas like this, I think iPad will be the first choice for SMBs too.

Guide on Creating PDF on Mac OS X

Mac users are lucky, especially when they need to create their own PDF files, because Mac can create PDF files without any additional software, which is very convenient for users who need to use PDF files in work or just to meet personal needs. If you haven't tried to make PDF on Mac, then keep reading.

Why Mac would add this built-in function? Simply, because the application of PDF files is more and more extensive, especially as a file transfer medium, PDF is more popular than other formats, like word and so on, what advantages does PDF have to let itself become the main tool to fun files. Then let's see the basic information about PDF, first from its name. PDF is short for Portable Document Format. We can see its features and functions from the name. Portable, which means it certainly can support most portable devices, with the fast development of handheld devices, especially the popular Apple devices, PDF is needed more than ever. It's very convenient to read magazines, files and eBooks in PDF format.

When using PDF files on Mac, it's more convenient than Windows, if want to create PDF files on Windows, we need a pdf creator, however, on Mac we can use the built -in function to do that. Now let's see how to do it.

Step1. Open the files you want to save as PDF. Here, you are allowed to run the application which the PDF files will be used as the basis. For example, if you want to make a PDF document and sent to others by e-mail, just press the "Mail" of your Mac computer.

Step2. On the toolbar of the document, you will find a "File" button, choose it and select the "Print" icon to move on.

Step3. Find the "PDF > Save as PDF" button. Then you can choose a folder of Mac computer to keep your new-made PDF files. Rename your PDF files in the "Save As" text box. Then hit "Save" to convert the file to PDF directly.

When the process is done, just double-click the created PDF

files and it will be automatically opened.

If you want to keep your PDF files being under password protection, just choose the "Encrypt PDF" and input a password. Also you may save document in PDF-X format by choosing "Save as PDF-X". After create the PDF files, if knowing how to convert pdf to html, you can share your PDF files via web pages, after all sometimes, we don't want to share the whole files with others, so via HTML pages, we have a choice to decide which part to share with.

Especially for new Mac users, they may don't know that Mac computer is a PDF creator itself, so don't bother to search any kind of this software on Internet.

MacBook Air Will Feature Retina Display just Like MacBook Pro and iMac?

The new iPad features Retina display, so it's very good to rip dvd to ipad to watch HD movies, but do you think iPad is the only iDevice that equipped with Retina display, of course not, according to the latest rumor, MacBook Pro and iMac will have Retina display, which we know about that, so how about MacBook Air, is it on the list too? According to 9to5Mac, the answer is positive.

Even the status of MacBook Air is not that important as MacBook Pro, but this time, Apple decides to treat them equally, so MacBook Air will be getting a retina display, too. That, for those of you following along at home, means that all the major products in Apple's Mac lineup - MacBook Pro, MacBook Air, and iMac - will be getting the same retina display treatment that the iPad got back in March.

There is a big chance that MacBook Air won't have an obvious improvement in design, but Apple is reported to be working on new 11.6 inch and 13.3 inch MacBook Air models. And it's said that Air will get Ivy Bridge processors, and better graphics technology needed to handle Retina-level resolutions. Batteries will also allegedly get an upgrade, much as the third-generation iPad did,

owing to the extra power consumed by high pixel densities.

But we won't see the next generation MacBook Air in WWDC next month, because Apple is still working on the unfixed problems of Air, including a Retina display (and more powerful internals to handle it) poses a significant challenge both in terms of heat and power consumption for the device. So unlike the MacBook Pro, which is expected to launch at WWDC, we may need more time to see new Air.

So until WWDC, I guess Apple won't tell anything to media, at least the official statement, but from all kinds of signs, some of us can forecast a little, like the new operating system running on the MacBook Pro - Mountain Lion - could come to us in less than a month. In June, we'll know if all these rumors are true or not, but the Air we are talking right here, we just need to continue guessing.

Whether the retina display will come to all these computers in all their size variations, nor whether there will also be (cheaper) non-retina display models available, nor how much a retina display Mac will cost, we still know nothing, but considering Retina display can give us more excellent feeling to watch movies or play games, which has been improved on iPad if you have tried to put movies on iPad. Nevertheless, assuming these reports are accurate, then this year's WWDC should offer quite a lot to look forward to.

After less than a month, we'll know everything about new Apple devices, even there won't be much information about Air, but still we are looking forward to it.

Top Five Best PDF Readers for You

PDF is used widely nowadays, no matter for individual needs or for work. With the increasing demands to use PDF files, it's very easy to create pdf on mac and on Windows, also, it's very necessary to have a good PDF reader, but some of us may feel confused about which PDF reader to choose, so here is the list of best five PDF readers.

1. Adobe Reader X. Since Adobe creates this format, naturally, it has its own reader. With Adobe Reader X, you can view and print PDF files in a very easy and fast way. And the content can be any kind multimedia file, photos, videos, emails and so on. A great thing about Adobe Reader X is its ability work with CAD designs and geospatial maps converted to Portable Document Format. Also, in case you need to locate any element within a PDF file, the application offers a comprehensive file searching engine that finds what you need in a matter of seconds.

2. Nuance PDF Reader. Maybe you have noticed that most PDF readers that we can find in Internet are free, so is this one. What's importantly is that this tool also can help you convert PDF files to any other format, like Word, Excel, HTML and so on, of course, speaking of HTML, I have been asked for many times what is the best pdf to html converter for mac, well, looks like Nuance only can support Windows, so if you are a Mac user, try iStonsoft, it supports a very good converter to convert PDF to HTML.

3. Nitro Reader. According to the comments of users who have tried this tool, looks like Nitro is pretty good as a free gadget, offers PDF creation from over three hundred formats, offers in-application functionality to create PDF from any file, with predefined profiles, as well as completely customized output options, enables to save all images contained in a PDF document as separate files to any folder or destination without modifying the original PDF file.

4. Foxit Reader. The functions of this tool First I want to talk about humanized interface design. It has clean, easily distinguishable icons, and the toolbar is still customizable. In addition, you can now choose your color scheme (black, blue, orange, purple). It's not ground-breaking, but it's a nice touch.

You can also choose a new ribbon-style menu and customize your own shortcut keys.

5. Sumatra PDF. Loading almost instantly, renders pages extremely quickly, and thanks to a huge number of keyboard shortcuts, you can zip through nearly any document with ease. Sumatra PDF, thanks to a lack of frills and extraneous features, is a great candidate for a portable drive or for in-browser use for someone who wants quick-loading PDF files without the lag caused by features they won't ever use.

Now you don't have to be bothered by which to choose among all those PDF tools, you can only test these five and choose the best one depend on your own needs.

Three Best New Games for iPad

With the Retina Display, new iPad is the best portable device to watch HD movies and play games, we can watch our favorite DVD movies on the big screen with mac

dvd ripper for ipad, but mostly, I guess we prefer to play games on it when we are waiting for someone or when just feeling boring. So except for Angry Birds and Fruit Ninja, these two most-frequently played games, what are the other latest and most fantastic games we can play on iPad?

1. Virtua Tennis Challenge.

As fans of Tennis, I bet you all have played this game if you have Android devices. Yes, Sega has released this sport title masterpiece for Android a long time ago, now this game comes to iOS for the first time.

Seriously, if you love this sport, then Virtua Tennis Challenge is the best game for you to enjoy the fun to play tennis. In this game, you can imagine yourself to be anyone, Federer, Nadal and Djokovic, whoever you want to be. Slice, lob and hit your best top spin as you take on the world's best and compete against 50 players in 18 stadiums around the globe. Build concentration by

making plays that match your player's style; unleashing a super shot that will make your opponent sweat. Sounds very exciting, right?

This game just arrives in App Store, and I just can't wait to play it.

2. Fieldrunners 2.

Fieldrunners was one of the most iOS games before, but since it hasn't any update for almost one year, so maybe some of you have forgotten it. However, the developer just announces that Fieldrunners 2 will launch on App Store in a month, first the iPhone edition, then iPad HD edition.

Even we have to wait for a month, but we can know how this sequel will be from the images that have been published by the developer. It expands on the gameplay of the first one with more, and more varied, maps, over 20 upgradeable towers, and more than 30 enemy types trying to ruin them.

Considering the popularity of Fieldrunners, I bet Fieldrunners 2 will excite many game players.

3. Infinity Blade II Update-Vault of Tears.

About this game, I guess you don't need more information from me. In the conference of new iPad, we already witnessed the wonders of this work.

So what does Chair will offer us in Vault of Tears this time?

There are two features about this update I have to mention. First, this update is totally free. Second, it's more socialized, adding a treasure map that marks treasure locations. Also, ClashMob is being expanded to allow anyone to participate in fights via Twitter or Facebook - no game required.

For game players, you mustn't miss these games, of course, except playing games on iPad, we also can watch movie, only there is one tip for movies fans, which is most videos have DRM protection, and we may need media drm removal. No matter what you would like to do on your iPad, just

enjoy the excellent feeling that it gives you.

The Great Gatsby Starred by Leonardo DiCaprio Will Hit Theatres in December

In the end of this year, Leonardo DiCaprio's new work "The Great Gatsby" will hit the theatre, which is adapted from the novel of F. Scott Fitzgerald. After the first trailer being released, this remake of classic novel has attracted the full attention. Moreover, the mysterious poster really surprise and confuses audiences, also lets people more interest in this movie.

The Great Gatsby was published in 1925, is a short story based on New York and Long Island in 1920s, and it's regarded as the symbol of the "Jazz Age" of American literature. However, it was not popular when published, the sales was less than 24,000 copies when F. Scott Fitzgerald still alive. And it was ignored in the Great Depression and World War II, until 1950s reprinted, it only received extensive attention. In subsequent decades, it has become the standard textbook for high school and university literature courses. It is called one of the greatest English novels in twenty century. Available downloaded at Amazon, and if you want to read it on other portable devices, you may need drm removal free to remove DRM protection.

About the plots of this novel or this movie, I bet most people already know. The protagonist of the novel is Nick Callaway, who is a stock trader in Wall Street, the neighbor of Gatsby. Gatsby is a very young and rich person. Callaway later experiences that no matter how dignified on the appearance of these wealthy people are, actually they all are very indifferent. Gatsby loves Daisy, who already marries to Tom. In a car accident, Daisy kills Tom's lover, and to protect Daisy, Gatsby says it's him who kills Tom's lover, because of this, in the end, he is killed by the woman's husband. Almost on one participates in Gatsby's funeral, including Daisy. Callaway finally found Jordan, a man who plans to attend the funeral, and aware that the so-called identity of

Gatsby is just an illusion. In the end, Callaway moves to the Midwest, leaving Gatsby's wishful dreams and sorrow behind. The remake is directed by Baz Luhrmann, the cast includes Tobey Maguire, Carey Mulligan and Leonardo DiCaprio in the title role. Judging by the amount of hits on youtube (1.5 million +) in two days, and if you have downloaded the trailer and want to watch it on your iPod, change it to the supported format with m4v to mp4 converter. The trailer gives us a taste of Luhrmann's classic over-the-top visuals and beautiful imagery. Not to mention some fantastically sparkly flapper costumes. Costumed by Catherine Martin, this new movie definitely has style, at least as far as we can tell from the preview. With the glitz and glam of every flapper dress, cloche hat and fur wrap, we definitely felt like we had traveled back in time when watched the trailer. But as fashion sleuths, of course we wanted to know: will the movie accurately depict 1920s fashion? More information about this movie will be known with the coming of second trailer, and there is much time for us to imagine the details about it, after all, we won't watch this masterpiece until December, so keep eyes on this movie.

5 Best PDF Tools for You

Applications of PDF files nowadays are very common, no matter for individual demands or for work. It's very convenient to upload, read, and share documents via using PDF format, naturally, it's very necessary to have a powerful PDF tool on the computer to help us read and create pdf files. Here are five PDF tools that are downloaded for many times, if you haven't gotten one or want to try new software, keep reading.

1. eXPert PDF Reader. From the name we can know that it's designed to read PDF files, which most PDF readers can do that too. So what are its special features? Except the common functions, it is available for users who use different operation system, no mater Window XP, Window Vista and Window 7. Moreover,

we know that run an app will slow down the system and that's really troublesome, well, this software won't. Hard to explain, but it doesn't effect your other operations, so maybe this is what you want.

2. PDFlite. As you know, English is not the only language in the world, even it's used very widely. So if an application can support more than one language, then I think it will be more popular and chosen by more people in different countries. So my point is PDFlite has this kind of function, it is available in English, Spanish, French, Chinese, Russian, Dutch, Japanese, and many more languages. Of course, it also can convert any document to PDF,

3. Aloaha PDF Signator. This software may have a little difference with the ordinary PDF tools. It's not designed to create and convert PDF files, which are the features that most people need. However, to fix some special problems, this software is definitely needed. Aloaha PDF Signator can sign any existing PDF Document. The Aloaha PDF Signator is completely PKI neutral and will work with PKI components from any vendor (this includes CAs, certificates, CRLs, OCSP responders, smartcards). You can now open, view and navigate PDF documents directly within PDF Signator. Thus allowing you to view and sign the document all from the same application.

4. PDF Converter. I have tried this tool to convert pdf to html on mac, and it works fine, so if you have the same demands to change PDF to HTML, this one is the best choice, very simple interface and just a few steps.

5. Aloaha PDF Saver. Well, obviously, this tool has a very simple but powerful function, which is it can save all documents in PDF format, so if you want to change your files into PDF, consider this one, on additional features, but to get a very direct and straightforward result, it's the one that you should choose.

Now, after knowing all these PDF tools, I bet you won't be troubled by how to make the most of PDF, just choose a good helper, everything will be easy.

â??Editorsâ?? Choiceâ?? Recommends Newest Apps and Games for You in App Store

Last week, Apple updated "Free App of the Week" in App Store, even we don't know if the developers of those apps agree to reduce the price voluntarily or Apple has promised to make up for them, no matter what, for us, it is good news though. Moreover, another good news comes recently, which is Apple updates the "Editors' Choice" in App Store.

Apple says they will present the most innovative applications and fun game in the "Editors' Choice" to users. Taking a look at this section constantly to know the newest apps and games, information of updates in App Store, or visit the former "Editors' Choice" to add more excellent applications and games for iDevices. So that Apple can be more flexible when selecting applications. And Apple makes it clear in iTunes that all the recommended applications and games are screened by their editorial team. This function now mainly serve for iPhone and iPad, so if you own one of them, why not try the recommendations, also, if you prefer to watch movies on iPad, you can transfer a tons of movies to it with ipad converter.

"Editors' Choice" will save a lot of time for users who want to choose the wanted games and apps. If you trust Apple's editorial team, then now you can go to "Editors' Choice" to see what apps they are recommending. Some current Editors' Choice picks on the

iOS App Store include the new Facebook Camera app, Extreme Skater, Sketchbook Ink, and Air Mail. On the Mac App Store, Deus Ex: Human Revolution and Cobook are being highlighted as Editors' Choices.

So you can see that this activity is not just helpful for us users, it's also a chance for game developers, obviously, after all, most people will try the app that recommended by Apple's editors. You know, there are millions of apps and games in App Store, and not every of them will be known by users, unless an app appears in the various stores' top 10 or at least top 25 lists, chances are that most users will never see it unless Apple decides to feature the app in its "new and noteworthy" section.

Now here are the questions. Are the "Editors' Choices" selected by curators based on what they consider a top app product? We don't know. What the criteria would be to have an app be selected as an editor's choice, we have no idea. Even Apple has declared that the editors are from Apple, still we don't know. But one thing is for sure, which is the app or game must be worthy, if not, there is no chance that it would be chosen by editors.

When you really don't know what apps and games to install in iDevices, you can consider "Editors' Choices", and download them in iTunes, and here is a tip for you, if you have downloaded anything in iTunes that has DRM protection, free drm removal can help.

Five New Features iOS 6 Will Have, According to the Rumors

WWDC is coming in a week, however, according to the rumors, we won't see any iOS device in this conference, but what we won't miss is the information about iOS 6, Mountain Lion, iCloud and so on. iOS 6 will meet us until this fall, but there are many guesses about it, one of them is that many new features will be added to iOS 6.

The first one is MountainLionCenter, it is a Cydia tweak, which can allow users to freely control the notification center, In addition, it supports both portrait and landscape screen mode. Just like how Mac users open the notification center, users can tune out the interface via slipping the screen from right to left. In addition, if using MountainLionCerber, some icons in status bar may be hidden so developers add those icons to MountainLionCerber so that users can view them conveniently.

The second is Siri. Right, you may feel excited about this news, because generally, iPhone 4S is the only device that can use Siri right now. We can not only rip dvd to iPad to watch HD movies on the Retina Display, according to 9to5Mac, Siri will come to iPad with iOS 6. However, only new iPad can have it, so if you own a new iPad, you can talk to Siri at that time. It will come complete with music playback, iMessaging, calendar managing, reminders, weather, maps integration, emailing, notes, contacts searching, Safari integration, Wolfram-Alpha searching and more. The only thing missing from Siri for the iPad will be the phone-related commands.

The third one is iCloud Tabs. iCloud Tabs allows iCloud users to view the labels in Safari on multiple iOS and Mac devices. After clicking the iCloud Tabs on the iOS 6 device or Mac, the opened label on each device will be displayed in a synchronized list, so users can quickly select the label. iCloud Tabs on the iPhone and iPod touch was hidden in the Bookmark Toolbar.

Another one is Do Not Disturb. This feature lets users turn off the notifications and messages from notification center. Sources say that while the option is present directly in the Mountain Lion Notification Center, the Do Not Disturb toggle is stationed like the Airplane Mode button in settings.

Of course, the new features of iOS 6 are more than these. Mark Gurman over at 9to5Mac relays what trusted sources told him, that iOS 6 will also include Mail VIPs, which is a new feature Apple announced in OS X Mountain Lion that works in a manner similar to Gmail's Priority Inbox in that it automatically collects your important email messages.

We can do many things on iPad right now, like how to

transfer

photos from pc to ipad, and if these rumors about iOS 6 new features are true, it will be more convenient for us to make the most of iPad and other iOS devices, so about the authenticity of these information, we just wait for the WWDC in next week.

How to Remove Watermark from PDF Easily and Quickly?

PDF is one of the most common ways to deal with documents, no matter for individual demands or for work. People would like to share files and all kind of resources in PDF format, also it's very convenient to convert a document from

pdf to html mac

, but there is one problem, which is people now know how to protect their rights when sharing resources, that's why most PDF files have watermark, so how to remove it?

1. Adobe Acrobat. There are many ways can reach the goal, the most usual way is to use Adobe Acrobat. Using Adobe Acrobat can remove most of the current image watermark in PDF files. This software is very easy to use, but there is one premise, which is the PDF file not protected by password. Once confirming that, you just need to follow the steps.

Step1: Free download the trial version of Adobe Acrobat and install it.

Step2: Open the objective PDF document with the Adobe Acrobat you have installed on your PC.

Step3: Click the Document > Watermark and then choose to "Remove" the watermark from PDF.

Step4: Save the modified PDF files.

2. If you can get the original document like Word (generally, PDF files can be converted from Word), you just need to create another new PDF file without watermark. But if you don't have the original Word file, that would be a little complicated, OK, first, convert the PDF file with watermark to Word, remove the watermark in Word, then convert the Word to PDF back. Get it? There are many converters that can convert PDF to other formats, like pdf to epub mac or the opposite way, so you just need to choose one to convert between Word and PDF.

3. PS. Right, this is a very traditional way, as long as you know how to use Photoshop. Photoshop is a very powerful tool, of course it can remove watermark, but most people don't know how to use it, but if you are a PS user, then this way may be the easiest. First, use the "print screen" key on your keyboard to capture a copy of the PDF file and open the image in Adobe Photoshop. Then it's time to use PS.

4. Foxit PDF Editor. As a third-party tool, it's pretty easy to use, of course you need to install it, about how to use it, just open the target PDF file and double-click the watermark, then right-click the watermark and choose "Image Editing", then black out the watermark.

These four ways to remove watermark from PDF files are not difficult, you can choose one that fits you mostly. Just try then you'll find it is very easy.

Three Steps to Transfer Music from iPod to Computer with iStonsoft

We all know that iTunes aims to protect the copyrights of songs and movies, all those resources in iTunes have DRM protection, if

we want to share them, the protection must be removed first with
drm

removal freeware. Also, we can't get the music that we
purchased in iTunes out of iDevices, because iTunes only can help
us sync music to the devices. So what should we do if we need to
transfer music from iDevices like iPod to computer?

There is always solution, actually you can find a bunch of
software that can help in Google, anyone can, so the question is
how to choose the best one, like it can transfer files very fast
and won't damage the files? As a faithful Apple fan, I use Apple
products like iPod touch all the time, so certainly I have found
lots of third-party software to help me make the most of my device.
As to transfer music from iPod to computer, I think iStonsoft is
the best.

It can transfer movie, photos, book, podcast, voice memo,
playlist, camera roll, audio book, etc. from iPod to computer with
ease. iPod is not the only device that can use this software,
iPhone and iPad also can run it. For many users who don't like
complicated operation, this tool is the best
ipod

music to computer transfer, it is very easy to use and can
extract files off iPod, iPad and iPhone at peak speed.

Three steps to show you how to use it:

Step 1: Free download and install the proper version of iPod
music to computer transfer to your computer. Then use the USB cable
to connect the iPod to your computer and run the software by
clicking the quick icon on the desktop. The software will
automatically explore iPod device and show the detailed information
on the interface of the software.

Step 2: In the simple interface, you can find the "Music"
folder on the left border. Just mark all music you need to
transfer. You can mark all files and the transfer will finish the
transferring at a time.

Step 3: The last step is to click the "Begin" button on the
top to export the music from iPod to computer. After a few minutes,
you can enjoy the music on the other devices.

Very easy, right? It takes a lot of time to find a good tool in Google, the worse thing is that after searching for a long time, you still haven't gotten the one that you need. As a helper for Apple users, iStonsoft has the ability to let them make the most of Apple devices and resources.

Features of iOS 6: Siri, FaceBook, FaceTime and So On

WWDC was held at the Moscone in San Francisco, Apple brought us the whole new iOS 6, which has more than 200 new functions, certainly can give users better experiences. This new update is only not available for iPad 1, iPod touch 1-3, so most Apple users have the chance to enjoy the functions that iOS will bring us this fall. Now let's see what features Apple has introduced about iOS 6 at WWDC.

1. Siri. This voice assistant is always the first one to recommend. Siri is one the most impressive features in iOS 6, but only new iPad can use it, of course and iPhone 4S. The voice functionality of Siri will be richer and more humane. In the future Apple will cooperate with a number of car manufacturers to develop products that can support Siri. Now except for figuring out how

to transfer dvd to ipad to watch DVD movies, new iPad users also can play jokes with Siri. Siri in iOS 6 can support Chinese, French, Italian and other new languages, which means this voice assistant is more international.

2. 3D Map App. The most direct result of competition between Apple and Google is that Apple will have its own map app. iPhone users have been using Google Maps for a long time, but this time, Apple released 3D map app at WWDC, the cooperation between Apple and Google now is over. Apple promised "vector-based map elements" that provide for smooth graphics and text, as well as "incredibly fluid" panning, tilting, and zooming.

3. FaceTime. As iOS user, who wouldn't use FaceTime to video

chat between each other? But there is one disadvantage about FaceTime, that we only can use it via Wi-Fi, well, this issue wouldn't exist any more. iOS 6 enables FaceTime calls over a cellular connection, 3G network. So now even we are outside, there is no Wi-Fi, we still can chat with friends via FaceTime, Apple will also unify your Apple ID and your phone number, enabling you to not only take calls on the move but answer calls from your Mac or your iPad with FaceTime.

4. Facebook. Finally, only Twitter integration is available on iOS devices before, now Facebook has been added in the list too. We can now post to Facebook directly through Apple's app. If you have watched some interesting movie on iPad with dvd to ipad converter, you can just share it to Facebook directly and introduce it to all your friends, very nice right?

5. Safari. First and foremost is the ability to sync open tabs from Safari on a desktop to Safari on an iOS device via iCloud. Brand new safari browser will also add offline reading feature. Now, Safari can cache full websites for offline reading, not just links.

The Amazing Spider Man Will Be Released in 3D on July 3

Directed by Marc Webb, starred by Andrew Garfield, The Amazing Spider Man will hit the cinema on July 3rd. This new sequel is still produced by Sony and Columbia Pictures. The story background in this movie will back to the time when spider man was still in high school, and just like other Hollywood movies, it will be released in 3D.

About who would play Peter Parker before it was decided, there were many choices. But before that, we should know why Tobey Maguire quits. Well, the reason is simple, because Tobey is no long suitable to play a high school student. So there were six candidates to play this role, including Andrew Garfield from "Boy A", Aaron Johnson from "Kick-Ass", Russia handsome actor Anton Logan from "Star Trek", Logan Lerman from "Percy Jackson and the Lightning Thief", Jamie Bell from "Billy Elliot" and Alden

Ehrenreich from "Tetro". In the end, the company chose Andrew Garfield, who has an excellent performance in Social Network.

About him, Marc Webb, the director said, "Even his name is not yet known by everybody, but no matter who has worked with him can feel his talents. He is one of the very rare actors who possesses wisdom, gentle and humor. Just remember what I say now, you'll love the Spider-Man played by Andrew Garfield." Fans of Andrew Garfield, you can watch it and other free iPad movie after being released.

So what will happen to Peter Parker in high school? Like most teenagers, Peter is trying to figure out who he is and how he got to be the person he is today. Peter is also finding his way with his first high school crush, Gwen Stacy. As Peter discovers a mysterious briefcase that belonged to his father, he begins a quest to understand his parents' disappearance - leading him directly to Oscorp and the lab of Dr. Curt Connors, his father's former partner. And then the story begins.

Cast members in attendance included Spidey himself, Andrew Garfield, Emma Stone (Gwen Stacy), Rhys Ifans (The Lizard/Dr. Curt Connors), Denis Leary (Captain Stacy), Martin Sheen (Uncle Ben), Sally Field (Aunt May), Webb and producers Avi Arad and Matt Tolmach.

As to the 3D release, the producer has something to say. The use of 3D made possible due to recent advances in technology, said producer Matt Tolmach. "It was very, very clear to all of us that this is a movie that was meant to be told in 3D. 3D is a form of storytelling, not just a way to sell the movie to audiences."

I guess most people will go to cinema to experience 3D effect, of course, if anyone who thinks there is no need to spend the money to watch it, you can convert

dvd to iPad on Mac, if you own an iPad and a Mac. But to me, I'm looking forward to this movie with all my expectations.
