## Facebook Video Chat is a good partner for your business

People should have heard "Facebook" and some people maybe are members of it. We can easily know that Facebook is an American college social networking site. Founded in February 4, 2004.

Facebook is created by several students from the Harvard University, it provides almost all experience of daily life the students need. Facebook lists the coolest, the most bizarre ideas and the most popular music, changing it like a yearbook. Worldwide there is a university e-mail suffix of people (such as. Edu,. Ac.uk, etc.) can be registered. Later, the Facebook can also be set up high school and the company's social network. From September 11, 2006 onwards, any user enter a valid e-mail address and their age, to join. Users can choose to join one or more networks, such as schools, companies, or regions.

Facebook held a media event Wednesday morning to unveil 'something awesome'. That something awesome is that Facebook is adding a group chat feature, and the ability--in partnership with Skype--to conduct video calls from within Facebook.

facebook

Awesome is in the eye of the beholder. Personally I would have been much more impressed if the 'something awesome' was the rumored Facebook iPad app. Awesome is also relative. These features may be awesome for Facebook users compared with not having them, but compared with rival platforms the Facebook features just play catch up, and don't even quite get there in some respects.

While the level of awesome can be debated, the addition of video chat within Facebook is welcome. Here are some of the immediate benefits for businesses to get on board with Facebook video chat.

1. You are already there. People spend more time on Facebook than on any other online destination--I assume that includes you. Your company has invested time and effort establishing a presence on the social network, and you have reached out and formed connections with coworkers, customers, vendors, and partners. If you are already staying connected and keeping in touch via Facebook, it is only natural to just click on a contact to video chat when the need arises. After the hilarious launching of iPad, the world is talking about iPad. Many people may ask the same question:

How to transfer PDF to iPad

? They ask because they use iPad to read eBooks. However, they can't download PDF files through Safari or transfer their local PDF files to iPad for reading. So here I will introduce 2 methods for transferring PDF to iPad for eBook reading on iPad.

2. They are already there. Facebook has more than 750 million members. With a pool of contacts that deep, you can be almost certain that whoever you want to speak to is out there--and because people spend more time on Facebook than any other online destination, odds are fair they're online and waiting for your video chat. It would almost be more difficult to find contacts who aren't available.

iPad Transfer

is the best choice for iPad fans to transfer iPad to Computer.

It is easy-to-use and it will complete your task with only a few clicks.

3. Saves time and money. Some things are just done better face to face. Some people are more productive when they can engage eye to eye. But, you don't have to be physically in the same room to accomplish that--you can use Facebook video chat. Traveling to meet someone face to face takes time--whether it is down the hall to visit a co-worker, across town to meet with a customer, or around the world to negotiate with a supplier. Trips beyond the office building also incur additional costs such as airfare, lodging, meals, etc. Facebook video chat is a click away. Why need you jailbreak iOS 5

? iOS jailbreaking is a process that allows devices running Apple's iOS 5 operating system (such as the iPad 3, iPhone 5) to gain full access (root access) to unlock all features of the said operating system, thereby removing limitations imposed by Apple.

4. The price is right. It is free. That is a hard price to beat. Companies of all sizes have invested vast sums of money over the years implementing video conferencing infrastructures. Now, Facebook is handing it to you for free--use it.

Facebook video chat is limited to one-on-one calls, unlike Google+ Huddles which allow for group video chat, or even group simultaneous watching of YouTube videos. There are certainly some practical business applications for the group aspects of Google+. Hopefully, Facebook will continue to expand on the video chat concept and include a group video chat function at some point. What would really be cool is if Facebook, Google+, Skype, Apple FaceTime, and any other competing video chat platform could all get

on the same page so they could all work together, but I won't hold my breath.

The initial implementation of Facebook video chat may be a little rough around the edges, but it is still good news, and it is a valuable tool that businesses can start taking advantage of immediately with the other 750 million Facebook users.

Maybe we can see more and more people become members of facebook and so many people can enjoy from here, why not to benefit more from now on. You just need to take action right now.

Apple iPad 3 new specifications are hot topic for people now

Apple products are always the most popular items, they have excellent performance and first-class configuration so that is a large number of consumers are keen to share the fashion, and the performance is outstanding, ipad 2 release is very successful, and now more and more people began to look forward to the arrival of ipad3. What ipad 3 can bring to us and what we can benefit from it? Now let's see some useful information from here.

The rumor says that iPad 3 may be released on January of 2011.

It's predicting iPad 3 new specifications including chips, cameras and retina displays - with a little bit of help from mysterious, unnamed people who can't possibly be identified. So what's the new iPad 3 specs according to the rumors predicted?

Let's see.

New iPad 3 Specs - Camera flash

From the very second the the first iPad was launched we could hear cries of "what, no camera?" ringing out across the globe. A front-facing camera seemed like rather a daft omission for a product that was otherwise perfectly suited for FaceTime calling, so Apple did the right thing and introduced one on the iPad 2. Also new to the second-gen model was a rear-facing camera which, in reality, will be ignored by many iPad 2 owners although it might have looked a bit silly without one, compared to its rival brands and their camera-heavy tablets. Whether it's really needed or not, we'd be very surprised if a camera flash didn't materialize on the iPad 3, if only to sate the thirst of the spec-hungry techosphere.

#### New iPad 3 Specs - Retina display

There were plenty of rumors that the iPad 2 would have a vastly improved display, so when iPad 2 launched, we were slightly disappointed to discover the the screen was exactly the same as on the previous model - same size, same resolution. What we'd love to see on the iPad 3 is the Retina Display, as used on the iPhone 4, with its impressive pixel density of 326ppi compared to the 132ppi on offer at the moment.

#### New iPad 3 Specs - Proper HDMI

While it's true that in the new iPad 2 specs, HDMI playback is supported, which is only possible using the Apple Digital AV Adapter, which needs an extra \$39. A bit of a liberty if you've just spent several hundred of your hard-earned pounds on a supposedly HDMI-ready tablet. We'd like to see a proper HDMI port on the iPad 3 so that we can hook up our iPad to our HD TV without the need for anything besides an HDMI cable.

#### New iPad 3 Specs - SD card slot

The lack of an expandable memory is something that gadget fans have been banging on about relentlessly since the launch of the very first iPad. Just like the first model, the current version, iPad 2 is offered in 16, 32 and 64GB configurations with the latter proving to be more than enough for many users.

However, missing expandability is an absolute deal-breaker for many, so until Apple bites the bullet and invests in an SD card slot for its next model, iPad 3, there are plenty of gadgets fans out there who still wouldn't touch the iPad with a bargepole.

#### New iPad 3 Specs - iOS 5

While the iPad 2 was introduced in with the updated version of iOS (4.3), what we really want to see is a more dynamic operating system, preferably in the form of iOS 5 and all the goodies that should come with it. It's likely to bring more multitasking options to add to the limited scope offered by the

current software, although we know that what everyone is crying out for is a Flash-friendly browser.

#### New iPad 3 Specs - DLNA

This might not be a must for everyone yet as it's only any use if you've got yourself some other DLNA pieces of kit to stream your content to. The iPad 2 currently limits streaming to Apple TV and AirPlay-enabled speakers, whereas it would be nice to have the choice of which products you can stream to, rather than being tethered to Apple-specific devices. We've got our fingers crossed, but we reckon this might be one area where Apple won't budge - at least not for a while yet.

There are seven good suggestions on Google+ for users

Google + will integrate Google's online product, as the basis for a complete social network. In order for service is different from Facebook, Google will be bet on one aspect: better privacy management, which is Facebook's weakness; course, privacy is Google's weakness over the past

Google+ is still the darling of the tech world nearly two weeks deep into its field test. The social network has attracted the likes of Digg Founder Kevin Rose, MySpace's Tom Anderson, and even Facebook CEO Mark Zuckerberg has come by to take a peek.

Google +1 buttons have surpassed Twitter social plug-ins on third-party websites, according to BrightEdge. And the site's

membership is estimated to be close to 5 million users--at least now we have an accurate count on the number of tech journalists in the world. But just because Google+ is in the middle of a love fest doesn't mean there aren't potential storm clouds looming in the distance. Now don't get me wrong, I'm using Google+ and so far I like it, but one privacy misstep or product quality mistake could doom Google's new project. Especially if the problems aren't fixed before the network officially goes out of field-test mode. With that in mind, here's a look at seven good suggestions on Google+ for users.

### The Background

Google Plus (aka Google+), Google's new social network, might offer the right mix of sharing and privacy to woo you away from your Facebook account. If you don't know how to use it, though, it's just a confusing mess of circles and contacts. So we've assembled a few tips to help you get started. Make sure you check out our video on Google Plus.

### Manage How Others See Your Circles

Directly under your Google+ profile picture is information about the people you have in your circles and the circles you are included in. Much like everything else on your profile page, this, too, you can edit. From your Google+ profile page, click the "Edit profile" button, then hover over your Circles information. To edit it, click the gray globe icon. From here, you can choose whether or not you want others to see who you have in your Circles and who has put you in their Circle.

### Jailbreak

iOS 5

### Keyboard Shortcuts

Google+ has designed a number of keyboard shortcuts that let you quickly maneuver through your Google+ stream, as well as format your posts using bold, italic and strikethrough fonts.

### Mute Annoying Posts

A post you commented on could quickly become popular and suddenly you find responses to it are spiraling out of control. Fear not, Google+ has a "Mute" function. To stop receiving updates from a post and remove it from your stream, click the arrow at the top of the post, then select "Mute this post." To un-mute it, follow the same steps and select "Undo mute."

## Share to Google+ From Gmail

When you're logged into your Gmail account, you'll notice a gray bar between your username and the Settings gear icon that says "Share..." This lets you post to your Google+ account without leaving Gmail. Click on the Share button and the same status toolbar from the Google+ interface will pop out, letting you post a picture, video, link or update.

## Double-Check With Whom You're Sharing

Sometimes it's easy to forget who you've put into which Circles. If you ever have doubts when posting an update or sharing a link on Google+, click on the "Limited" link at the top. You'll see photo icons for each of the people who will be able to view and share your post with their connections.

## Disable Google+

If Google+ just isn't for you and you want to leave the service, here's how to do it. Click your full name or email address in the Google+ bar, then click "Account settings" and choose "Account overview." From here, click "Delete profile and remove associated features." This will delete your profile and remove your Google+ posts, circles and other content. You will still be able to access Gmail and most other Google services.

For the consumer, feel free to visit social networking sites, it has become a major factor to buy the smart phone. Google +'s success in part to depend on the service user experience in mobile performance. Google + The client has been released Android, Google also said that it would soon release version of the corresponding application iOS.

## The latest 4 e-readers bring you more wonderful summer

E-readers with powerful features and simple interface to attract more and more users, you don't have to do all of your reading on a physical book or on a PC from now on. Here's a look at the top 4 e-reader models, you can choose the most suitable one for your summer, i believe everyone can easily enjoy and benefit from it. You can read the following article carefully to get more information.

E-readers make it simple to tote dozens, even hundreds, of books on the go. Of the eight e-readers we're highlighting here, all but two models employ a paper-like E Ink display for easy-on-the-eyes text that you can read in bright sunlight. Two LCD-based devices make the cut, too: the Barnes & Noble Nook Color, which does a great job of rendering text, and the nearly ubiquitous, multipurpose Apple iPad 2.

### Apple iPad 2

Honestly, once you start discussing LCD tablets as e-readers, you have to throw the Apple iPad 2 into the mix. All of the major digital booksellers offer apps for the iPad, and many of those let you easily make annotations. Plus, for your \$499 entry price for a 16GB Wi-Fi iPad, you get so much more functionality, including email, Web surfing, and apps for everything from word processing to Facebook, Twitter, and games. Just don't count on using your iPad while lounging on your deck chair: In bright sunlight, its LCD becomes a reflective surface that makes reading a chore. If you find a beautiful song played on iPad, have you ever tried to find the ways how

to transfer music from iPad to computer in order to enjoy songs with media playing software such as: Windows Media Player? So what you will do for transferring music from iPad to Computer.

### Amazon Kindle DX

Comparatively speaking, the Kindle DX remains expensive--\$379 for a 9.7-inch E Ink e-reader, the same price as the least-expensive 10.1-inch Android tablet you can buy. But really, it remains a great choice if you plan to read a lot of material that's optimized for the large screen (say, textbooks as opposed to trade paperbacks). The DX is too heavy to hold in one hand, but it sure beats lugging around a 500-page tome. Do you want to know how

to watch movies on iPad, Well, everyone does! However, the

biggest disappointment of iPad users is how to upload the free movies online onto their cool iPad gadget. Never mind, Video Converter for iPad comes as a best solution for you. By this means you can save a lot of money rather than buy expensive movies on iTunes. Learn the thoughts of watching movies on iPad:

#### Barnes & Noble Nook Color

The Nook Color may be an LCD tablet disguised as an e-reader, but it holds appeal for its reading-optimized design. The touchscreen is highly responsive, the graphics for shopping and navigation are terrific, and reading periodicals is a treat. Annotating selections is easy-peasy, too. Plus, you get the benefit of a Web browser, email, and a small selection of apps available through Barnes & Noble for use on this Android 2.2 tablet.

#### iRiver Story HD

Google is everywhere. The company has made a strong push with its Google Books project, but until now it hasn't had a tie-in to a stand-alone e-reader. That changes with the \$140 iRiver Story HD. The Story HD makes getting Google ebooks onto an E Ink-based reader reasonably easy. The device's design feels cheap, and its performance and interface are letdowns, but the Story HD does a great job of distinguishing itself in display quality. As its HD moniker implies, the 6-inch display sports a 768-by-1024-pixel resolution, the result of an improved electronics backplane. That higher-res backplane in turn helps the E Ink technology--which already uses dozens of microcapsules per pixel to form letters and images--look better.

## People will benefit more from Gmail's New Features

Gmail is another email service. However, the sophisticated concept makes it in many areas different with other services: communication can be more simple, effective and fun. The beginning of construction of Gmail, when we noticed quite frustrated when people use e-mail, that is to start designing our products. The result is the product faster and more concise and more intuitive.

Google took advantage of the launch of social networking service Google+ to give Gmail a makeover. The company says the process of updating Google Apps is ongoing, and improvements have continued to roll out in recent weeks.

Here's a primer to help you wade through the changes.

--Choose an inbox style. Most Gmail users have likely already noticed an option at the top of their inbox to choose between the handful of ways Gmail sorts incoming mail. The options will be familiar to most -- starred first, unread first and Priority Inbox, which Google started offering last year. After users choose one of the options, the bar across the top disappears. To try a different inbox style, there's a drop-down on the Inbox link on the left-hand side.

--Multiple calls from Gmail. Google added the ability to place Gmail calls on hold and handle multiple calls simultaneously last week. The feature works for both incoming and outgoing calls, so it's possible to hold one call while placing or receiving another.

--Spreadsheet keyboard shortcuts . A new keyboard shortcut sheet is available from within a Google Doc spreadsheet. Pressing Ctrl+/ or Cmd+/ brings it up.

--View ZIP and RAR contents without downloading . Last week, Google added previewing capability for both types of attachments. It's now possible to see the contents of an archive within your inbox before downloading it. You can also download individual files from the archive to a local source or save them to Google Docs.

--More sender information. A bit of a no-brainer here, but Gmail also now automatically displays the full address of mail from a person not in your contacts list. It also tells you when a message has come from a mail-sending service. The idea is to cramp down on phishing attempts. In fact, Gmail will now call your attention to messages it thinks might be after your personal information, giving you the option to report the address back to Google.

Another change: There's also now the ability to share Google Docs with the Android app and a few other upgrades to mobile capability.

Google promises more improvements, following the announcement that it will be shutting down its Google Labs division to focus on existing products.

Google's mission is to organize the world's information and make it universally accessible and useful. We know that people are every day more and more important information exchanged and stored in the e-mail and chat. Tracking information or to find later, can be a very difficult task. We believe we can solve this problem. Gmail helps users understand the stored information in your inbox. Spam rarely, the search easier, and you can keep important information. Google's search technology is a central pillar of all these. Today, we developed this technology to search for e-mail with unprecedented ease and efficiency. See more like this:

## The Most Popular Four Photo Editing Apps for Your iPhone

It is possible to take good photos on your iPhone without shoving it through a lo-fi photography app. And as cool as it may seem to make your party photos look like they were taken in 1976, one can't help wonder what we will think of them in retrospect.

### Camera+

If you are looking to download just one app to suit all of your basic photographic needs, look no further than Taptaptap's Camera+. It does everything-you can take, edit, and export your photos all within the app. The coolest part about Camera+, though, is definitely its capture options. When you are composing your shot, use two fingers to lock the separate focus and exposure points before taking a photo using the normal, stabilizer, timer, or burst mode. The capture feature also gives you a grid overlay so you can obey the ever-important rule of thirds.

After you have taken the photo, pull it up in Camera+'s lightbox where you can add filters, digital flash, crop (using its built-in "golden ratio" tool) and put a border on it. In the Scene modes feature, you can choose from different options like Sunset, Portrait, and Backlit to automatically adjust settings for better photos. From there, share it on Facebook, Twitter or Flickr. See our full review of Camera+ [here](#).

### Filterstorm

Available on both iPhone and iPad, Filterstorm is an excellent program for editing and enhancing your images. Filterstorm makes good editing extremely easy. To make the blown-out sky in your landscape photo more dramatic, you can curve out the highlights and apply it using a mask brush. There are brightness and contrast options as well as a saturation control. More advanced options include a clone tool, a multi-exposure tool, and border effects. And if you want to see your progress, the app features a 10-step visual history. Once you are done, you can save your edits as automations so you can quickly apply them to other images to give batches of photos the same unique look. Export your new and improved photos (you can size them up to 3072-by-2200 pixels) and send them to friends over Email, FTP, Flickr, and Dropbox.

### Slow Shutter

Photographers who normally shoot in manual-mode are no doubt frustrated with iPhone photography. For them, the idea of

adding a blurring or lightening filter instead of just slowing the shutter speed takes away the art of playing with camera settings. Cogitap's Slow Shutter app gives some of that control back to the photographer. Since the iPhone camera doesn't have shutter control, Slow Shutter mimics the effect by layering multiple photos on top of one another. It's a cool solution that unfortunately caps the image size at 1024-by-768 pixels-small, but big enough for most online purposes.

Slow Shutter features three capture modes-Automatic, Manual, and Light Trail. Automatic is relatively equivalent to the shutter priority mode in a DSLR; Manual opens up the aperture all the way, absorbing all possible light so you can adjust the exposure afterwards; and the Light Trail mode is designed for light painting. There is also a manual, Tap To Focus option. When using this app, make sure you have an extremely steady hand or a tripod, because nothing can ruin the magic of slow-exposures more than camera shake. If you are using a tripod, Slow Shutter has a useful self-timer so you don't even get the shake that comes with pressing the capture button.

#### Dynamic Light

High Dynamic Range (HDR) photos are dramatic, beautiful, and look super professional-and with Dynamic Light, they are ridiculously easy to recreate with just one photo. This was a stand-alone application for PC before it was an iPhone app, and it has brought its great processing capabilities to the iOS interface. In Mediachance's Dynamic Light, you can take photos or upload old images and apply the app's one HDR feature to make a landscape look epic. You can control the strength and radius of the HDR effect with an incredibly simple interface. You just have to move your finger around the axis in a box of light-the horizontal axis is strength of the effect and vertical axis is the radius-and you can watch your photo change as your settings do.

After you have selected the perfect intensity of the HDR effect, you can add an additional filter (but too much and you run the risk of making photos look laughably processed-even for an HDR.) The product itself is one of the best one-shot HDR effects available, and the app works wonders with photos that have a lot of texture.

We all know that there are many iPhone photo editing apps on the markets now with more and more people becoming iPhone fans. If you want to benefit more from your own iPhone, you should take

attention to this article to get more useful information. Just be more professional, to fully use your powerful iPhone from now on.

### 3 Apps are your good partner to use your Android Phone as a High-End Camera

We scoured multiple Android app stores to find the ultimate photography apps for shooting, editing, and sharing pictures. Here are the nine apps we tested that every photographer should have.

#### The Best Apps the App Stores Offer

Most new Android phones these days have a 5- or 8-megapixel camera, as well as a handful of advanced features and settings. And unlike Apple's iPhone, many Android phones allow you to tweak basic camera settings--such as the white balance and exposure value--so you can get some really great photos out of them. The iPhone App Store still has the advantage in photo apps, however--and it's a shame, really.

Thankfully, the number of Android camera apps is growing. A few successful iOS camera apps have migrated over to the Google side, as well. But beware: You'll run across a lot of duds and cheap knockoffs that aren't worth your 99 cents. Luckily for you, we scoured the Android Market (as well as other Android app stores), tested as many photo apps as we could, and selected the

very best for your buck.

#### Lightbox Photos: Filters, Instant Photo Upload, and Social Networking

Lightbox is Android's answer to the Instagram app for the iPhone, and it's one of my favorite apps in the Android Market. When you first install the app, it will require you to sign up for a Lightbox account; after a few simple steps, you're ready to start snapping pictures. Take a picture, and like magic it automatically uploads to your Lightbox online account. (Yep, it pretty much does what iCloud will do for the iPhone in iOS 5.) After you take some photos with the app, you'll be able to access them easily from your tablet as well as your PC. You can add filters to your photos, à la RetroCam or Magic Hour, though the filters are a bit limited. Lightbox also has excellent social networking features: Not only can you share directly to Facebook, Foursquare, and Twitter, but photobloggers will also love the ability to upload directly to Tumblr. Maybe the best thing about Lightbox is that it doesn't require an Internet connection or a cell signal to use--you can still snap photos, and it will sync up everything you captured once you're connected again.

#### Pocketbooth: Photo-Booth Snapshots

Although the Android Market has a few photo-booth apps, you have to look elsewhere to grab Pocketbooth, the best of the bunch. Pocketbooth, which is wildly popular for the iPhone 4, is available in the Amazon App Store, not in the Android Market. Unlike other similar apps, Pocketbooth uses your phone's front-facing camera so that you can see how you look before you start snapping the photos. Once you've checked your teeth and patted down your hair, you just press the start button, and the app will snap four consecutive shots. The app's user interface smartly mimics a retro photo booth, with a light sea-green frame and wood paneling surrounding the camera viewfinder. Then, when your photos are done, you retrieve them at the "slot dispenser" on the next screen. From there, you can send your photo strip via email or MMS, or post the pics to Facebook or Twitter. You also get a small variety of retro filters to pick from, and you can adjust the border color, the strip size, and the time between shots to your liking. It's almost as fun as being in an actual photo booth.

#### HDR Camera: More Definition and Details

The iPhone 4 has HDR, so why can't your Android phone? Out of

all of the HDR (high dynamic range) apps we tested, HDR Camera by Almalence is the best. Such apps allow for a greater dynamic range between the lightest and darkest areas in an image; for daylight photos, that means more definition in shadows and sharper details in light areas. Sometimes, HDR can look a little cartoonish or unnatural if done poorly. But HDR Camera uses "fusion algorithms," which compensate for shaky hands--a common problem with phone cameras. The software also detects moving objects in the scene, so you won't get any blurring or ghosting artifacts. HDR Camera is tailored for mobile phones, so it can process the image quickly without bogging down your handset. A Pro version of HDR Camera, available for \$3, gives you more control over contrast, color vividness, exposure, and more.

## Choose great free games for your own computer

I am glad to recommend computer users the best and brightest games at a price and i believe you really can't refuse them. Just take your attention now and you can easily make your PC life more interesting and more wonderful.

Freeware games--available for nothing at all--have always been a part of PC gaming's DNA, but recent years have seen an explosion of free titles that are addictively enjoyable. We've rounded up 21 of the best freeware titles for your PC, from retro-shooters to cutting-edge platformers and experimental indie

games. This trove of free treasures could keep you gaming on the cheap for years to come.

#### Cave Story

Cave Story, or Doukutsu Monogatari as it's known in Japan, is a charming little platformer with a rabid fanbase. Devoted fans have translated the game into English and ported it to everything from Linux to the TI-83 calculator.

#### Digital: A Love Story

The most interesting game on our list may also be the hardest to explain. When you open up Digital: a Love Story for the first time you'll be confronted with what looks like an old PC interface from the 1980s asking you to sign on to a local BBS. What looks like a simple exercise in nostalgia, however, soon blossoms into an addictive interactive story of love, conspiracy, and old-school hacking.

#### Passage

The short game Passage may not be for everyone, but you owe it to yourself to try it at least once. This art game's many unusual features, from its prosaic storyline to its weird aspect ratio (the game runs at 100 by 16 pixels) made indie developer Jason Rohrer famous--and justifiably so.

#### Battle for Wesnoth

Battle for Wesnoth is a turn-based strategy game set in a medieval world. The graphics may not look like much to a modern PC gamer, but the gameplay is brutally addictive and the developer tools that let you create your own units and maps make Wesnoth infinitely replayable.

#### League of Legends

League of Legends lets you level up as a powerful champion fighting your way through massive waves of enemies. League is technically a "freemium" game, meaning that you have to pay to unlock some of the heroes and items in the game; but in view of its massive popularity, we couldn't drop it from the list.

#### Battlefield Heroes

Tired of grim, gritty WWII action games? Then the second freemium title on our list, Battlefield Heroes, might be the game for you. Visually, Battlefield has more in common with a G.I. Joe cartoon than with Saving Private Ryan, but this third-person conquest game's classes and leveling system provide a lot of depth.

It is obvious that free games have a lot of attractive to people, maybe you want to benefit more from your computer, maybe you want to spend your long summer holiday, just read this article carefully to get more information about the most popular PC games. Start here, to be more professional.

## Why are people willing to choose Apple products

Why do so many people would choose the iPhone? Look beautiful?

There are many beautiful mobile phones than the iPhone in the market. Convenient? It is very inconvenient to use iPhone 4, is trouble to copy files, trouble to play video files (format problems), and even have trouble in charging, because they can not be replaces the battery. So what makes a large number of consumers become loyal fans of Apple, so obsessed with Apple products, iPhone mobile phone? I think it is the iPhone's system and application store. iOS is needless to say, even with the highest of Android, I do not feel it has good fluency than iOS. I have not found the fluency of a cell phone can surpass the iPhone 4, I believe that as long as you played the iPhone 4, you will not let it go, because it deeply attracted you.

**Which brand can be compared with apple**

Apple with its glory attracts more and more consumers. Like all Apple products, iPad is stylish and elegant, dazzling. Now I find that compared to the products that have pretty design and easy to use, Apple is more revolutionary in another area. Apple found a secret: the language can be both beautiful and easy to

use. Text can be more elegant and humorous, let people feel happy. (Even if other companies had know this secret, and had forgotten.) Apple's success is especially noteworthy. Because of its success in large part due to four products - iPad, iPod, Mac and iPhone. Apple now has a matching software, such as OSX, Safari browser, iTunes and App Store. These non-hardware together to create a "iProduct" empire. With the aid of the third-party software we can achieve to wirelessly sync iPod Touch to Computer.

Those brands who compete with Apple nearly failed, or nearly started under enormous competitive pressure. Blackberry, Kindle, and ASUS netbook on the function, in terms of content access and software applications, can not match with Apple. Apple's sophisticated hardware, software and stylized organic mass media content together, allowing opponents far behind. On Windows Mobile, Firefox and Google's search engine, by the operating system and browser software packages on the composition of the apple for them to form a great threat. For Flash, Apple's attitude is implicated directly blocked, at least in Apple's own products. Apple's iPhone has undoubtedly become a benchmark, as long as this so-called competitors release new products when the Association and to compare Apple's iPhone, to prove his relative to Apple's strengths and challenges Apple's confidence. But everyone knows the world has only an apple, when it will be a product to be almost in the extreme, the newcomers have done better, and can not be Apple, even, people will think you are the copy Apple only. With this

software, you can easily rip DVD to AVI, MP4, AVI, WMV, MOV, MPG, MPEG, 3GP, 3GPP, MPG, ASF, FLV, VOB, WMA, M4A, MP3, etc. with super fast speed.

Apple is an "alternative", it is one of the world's largest high-tech companies and is also the darling of Wall Street. Apple is a hardware, software, content providers, consumer electronics as one of the company. It created a more than one but three can claim to have landmark products. The product content distribution pattern seems to subvert the consumer demand for products. Apple is a killer, is the universal enemy, because Apple wants to be the first in the market.

## Steve Jobs tells us the real meaning of design

For example iPad, iPod or Macintosh, these products are not simple, they are the perfect combination of software, but it looks so simple in the look and feel. They are not only product design, they are artistic, creative expression, in the tradition. Emphasis, to maintain simplicity, this design is more complex than the cumbersome processes and higher over the art. However, simple has become an essential factor of success of user experience.

### 1. See if Google Services Are Working

Ever tried to access one of Google's services but you've been unable to? If you're like me, the first think you'll do is ask any colleagues nearby whether they can access the service. Well, no more. By visiting the Google Apps Status page you can see at a glance whether there are any problems, and if so, what the nature of the problem is.

### 2. View All Kinds of Files Online

Google Docs Viewer is a neat little Website that lets everybody view files online, avoiding the need to download and open them manually. Despite its name, you don't have to be a Google Docs user to access it. All you need do is visit Google Docs Viewer and enter the address of the file you want to view. (Gmail users will find that attachments in messages are automatically linked to the Google Docs Viewer--just click the View link at the end of the message.)

Until recently it was only possible to view office documents, such as Microsoft Word or Excel files, but a few weeks ago the list expanded significantly to include Adobe Photoshop and Illustrator files, TrueType fonts, AutoCad files, and even files created by Apple's iWork Pages.

### 3. Avoid Account Hijacking

To ensure that nobody but you ever accesses your Google account, you can have Google phone you with a confirmation code or send a SMS to your cell phone, every time you login. That way, even if somebody steals or second guesses your password, there's

simply no way they can access your account.

This security is known as a two-stage verification procedure, which you can set up here. Note that this service is still being rolled out and might not yet be available to you. Keep checking back, however, because the intention is for it to be available to all Google users.

Gmail users can also use an @google-mail.com address. Gmail users can also use an @google-mail.com address. A drawback (or benefit) of the new security is that you might need to add new, specific passwords for certain Google services, such as mobile Gmail, desktop Picasa, or AdWords Editor. This is because these services don't yet work with the two-step verification process. Signing up using the link above will walk you through what's required.

#### 4. See Who Last Accessed Your Account

Worried somebody's been snooping on your Gmail account? By clicking the Details link at the very bottom of the Gmail page, you can view when, where and how your Gmail account was last accessed. The last 10 logins are listed.

#### 5. Test Your YouTube Connection

Has YouTube been stuttering, or just a little slow? By right-clicking any video and selecting Take Speed Test or just visiting this speed-test link , you can compare your playback speed to others who use your ISP, as well as comparing it to the average speed for your city, and country. By clicking the Show Video Test link, you can measure your speed. Just look at the HTTP section in the information window at the top left of the video display to see how quickly you're receiving the video file.

These basic Google search techniques and advanced techniques, most of which you may already know, but if you know that another part, it will bring great convenience for your search process.

## Apple and Facebook will become major competitors in media industry

It is said that social networking site Facebook will officially launch the highly anticipated iPad special applications on October 4 to be held Apple iPhone 5 phone conference. In addition to Facebook version iPad application, it is anticipated Facebook also will release a revised version of the iPhone application, and may launch a mobile application market based on HTML5.

ipad

video converter is a good choice for you to use your ipad perfectly.

Apple's core competence lies in a fresh, simple, elegant content consumption way to replace the previous complex and ugly way. Facebook is a similar pattern of positive into Apple's market. Apple through the iPod, iPhone, Apple TV and iPad do this. And "complicated, ugly" is left to the outside world the impression that Facebook was. In the Facebook model, the user does not pass through iTunes, but through the dynamic summary to discover content. Facebook's News Summary will help you understand what your friends and family are doing. If you see friends are listening to a song, then Facebook will help users to listen to the same song. In addition, the Friends will also users to purchase or lease an impact on television and movies.

More importantly, if the success of Facebook, it will be successful for social networking model. If you find media content through social networking is the future trend, then Apple must enter this field. Apple has launched a social network for iTunes music Ping, but can not see the future of social networking.

Apple is now more like a media platform, rather than the consumer electronics company. Over the past 10 years, Apple's success changed the user to create and consume media content. In the past 10 years, Apple iPod, iTunes, iPhone, App Store, retail stores and iPad products and services a success. Although the Apple TV set-top box has not yet achieved the same success, but this is a cool product.

Apple has a common theme of these success that Apple hopes to improve these products and services in the consumer media content when the user experience. Apple has created such a model: the

user through iTunes discover, purchase, enjoy music, movies, TV shows, books, audio books, magazines and newspapers, followed by the likes of Apple products to play the content. If you watch a movie in the iPad the first half, then you can watch on TV after half, this pattern of integration has brought pleasure to the users. If you are iPad user, I think

iPad to iPad transfer

is an essential tool for you.

The service Facebook launched this week has started to impact Apple, and in the future of media consumption will bring a challenge for Apple. Apple should make a comeback, with a fresh, simple, elegant way to replace a complex, ugly way. Many people find it difficult to

sync

iPad without iTunes, especially once they plug the iPad in a new computer, the iTunes will erase all the iPad library.

Here you can see detailed information of iPhone 4S and you will easily fall in love with its 5 unique attractive features.

iPhone 4S Design

The iPhone 4S is a cosmetic duplicate to the iPhone 4, which

isn't a bad thing if you loved last year's design. It has glass panels on the front and back, with aluminum wrapped around all sides. Its dimensions are 4.5 by 2.31 by 0.37 inches, and it weighs 4.9 ounces. The 3.5-inch "Retina" display has a resolution of 960 pixels by 640 pixels.

#### Intro to Siri Voice Recognition Technology

The iPhone 4S isn't just about new hardware. It also includes Siri, a voice-activated virtual assistant. Siri responds to spoken queries by serving up information from the iPhone's built-in apps, and it can read incoming messages in a computerized female voice. Users can also dictate text messages and email messages to Siri.

#### 8-Megapixel Camera With 1080p Video

The iPhone 4S camera has an 8-megapixel sensor for capturing images at 3624-by-2448-pixel resolution. Apple says that the new camera is faster than the iPhone 4 camera, too, capturing a first photo in 1.1 seconds and snapping subsequent photos in 0.5 second each. It also includes a face-detection capability. On the video side, the company says that the iPhone 4S can capture 1080p videos with image stabilization and noise reduction. Of course, there's also a front-facing camera for FaceTime video chat, but that's old news.

#### A5 Chip

Apple's A5 chip, which debuted in the iPad 2, consists of a 1GHz dual-core processor. According to Apple, the A5 chip is seven times faster than the iPhone 4's single-core A4 chip. Thanks to the new processor and iOS 5, Apple says, the iPhone 4S supports 8 hours of talk time, compared to the iPhone 4's 7 hours

#### New Antenna Tech

The iPhone 4S builds support for GSM and CDMA networks into the same chip, allowing users to roam on GSM networks around the world, regardless of the U.S. network they subscribe to. On AT&T, the phone will have HSPA+ data speeds of 14.4 mbps. The iPhone 4S can switch intelligently between two antennas to improve call quality.

There are five attractive features available in iOS 5

It is such a good news for us that iOS 5 contains a series of new features, including Notification Center, Reminders, iMessage, Cards, and other new applications, they may replace the important position of many popular third-party applications.

free

youtube to mp3 converter can let you save all the sound played through your computer speakers.

Now we already know iOS 5 contains more than 200 new features. iCloud service is one of the biggest selling point of iOS 5.

Users can back up their equipment on iCloud various types of data, and can use this function to find your own iOS devices and locations of your friends. One of the most noteworthy is the Notification Center, which allows a user to easily view and manage the location notice. It also includes a device that allows iOS users to send each other text messages, photos and video of the new information services iMessage; and the new newspaper and magazine subscription Newsstand. Powerful software allows you to convert

WMV to MP4 in a few minutes.

iCloud: Back up your calendar, email, iWork documents (sorry, Microsoft Office), phone contacts and more, and access them all on your iOS 5 device, your OS X Lion-, Windows Vista- or Windows 7-equipped desktop, or via Apple's slick Web interface. iCloud also remembers your past App Store purchases, so deleted apps or songs can be re-downloaded easily. Each iCloud account comes with 5GB of free storage; can be purchased right from your phone. Most syncing requires a Wi-Fi connection and that your iPhone be plugged into a power source, so it's not completely wireless, but close enough for most.

Photo Editing: The new photo-editing capabilities that are built into the iPhone's standard camera are minimalist but

workable. Now, when you click the Edit button in your Camera Roll, you can crop, reduce red eye, or auto-enhance an entire photo. These features aren't nearly as in depth as other photo editing apps, such as Adobe's free Photoshop Express, but are great for touching up a picture on the go.

Twitter: If you're not already a Twitter user, iOS 5 may make you one. Twitter is everywhere on iOS 5, including on Maps and in the Safari options menu, and it looks gorgeous. When you're setting iOS 5 up, Apple even asks if you'd like to download the official Twitter app. Sorry, Facebook.

iMessage: Your iOS 5 friends can now reduce their text message plans (if your carrier hasn't eliminated that option, like AT&T did) by using Apple's BlackBerry Messenger look-alike that functions essentially the same as SMS but doesn't work against your reserves and can include "read" receipts.

Quick Camera Access and Grid Shots: You now have instant access to the default camera by double-clicking the home button on your iPhone's lock screen. You can also use the volume up button as a shutter and use a grid overlay to stage your photos.

If you are ipad user, you may need

After repeated improvement, the official version bring us a more perfect iOS 5. In fact, these new features, there are some already exist in the current iPhone and iPad being, but before they are through third-party applications to achieve. Today, Apple will tightly integrate them into their own systems. iOS 5's some features may sound cute but playful and even some low-level, for example, use the volume keys to increase the program to act as camera shutter key. Of course, more functions are useful, such as the notification center is perfect, and more convenience by using iPhone, iPod Touch or iPad, these individuals are now able to fully run their own equipment.

Ice Cream Sandwich: Powerful functions and unique features

The latest Android 4.0 system is named Ice Cream Sandwich

(hereinafter referred to as ICS, ice cream sandwich), I believe that people have heard the latest generation of Google's operating system Android Ice Cream Sandwich, and many users could not wait for its release. Fortunately, for the Android Ice Cream Sandwich operating system, all Android fans around the world are feeling the same urgency. Now let us look at it in detail.

mac dvd ripper is an ideal solution for ripping your DVD to all popular video formats.

Held in May this year, Google I / O conference, Google officially announced the existence of Ice Cream Sandwich, the world's Android users and developers are highly anticipated on this operating system. Google said code-named Ice Cream Sandwich operating system that features the system will be uniform in all versions of Andrews, Andrews Tablet PC and change the differentiation status of smart phones, while according to Google's statement, Ice Cream Sandwich will have its own characteristics .

The Android 4.0 lockscreen closely resembles the one found on Android Honeycomb tablets: a lock icon, surrounded by a circle, which you flick outward to unlock the phone. Home screens behave the same way as they currently do on Android (swipe left or right to navigate, open an app drawer, retrieve widgets, and so on) except you now get a customizable "favorites tray" that resembles the dock in iOS. Because the Galaxy Nexus lacks physical navigation buttons, the Back, Home, and Recent Apps icons are located at the bottom of the screen and lit up when touched. Google gave no word on how ICS will work on older phones with physical nav buttons, but future phones running Android 4.0 may lack them as well. If you tap the Recent Apps icon at the bottom right of the screen, a scrollable list of running apps pops up -- each with a thumbnail image of that application. You can close a particular app by flicking it away. The flicking gesture command is accepted throughout Android Ice Cream Sandwich, and is also used to dismiss specific notifications in the Notification Tray.

Besides accepting gestures, the Notification Tray displays photos and supports music controls, so you don't have to go into a specific app in order to skip a song or pause your music. The Notification Tray is now accessible without having to unlock your phone. Just drag down the tray from the lockscreen and you can quickly jump to new text messages or e-mail messages by tapping on a notification. I like the fact that you can quickly get into apps without having to unlock the phone first, but I hope Google puts a security measure in place so that not just anyone can

access your private communications.

Some people think that the poor sales of Android Tablet PC due to the operating system is not strong, and Android's user experience has a big gap with the Apple iPad, and now, with Apple iOS 5 and Google Ice Cream Sandwich's release, a new round of the competition has begun. As consumers, we are quite happy to see two giants of the competition, because competition in the business will bring our customers more cheap and comfortable products.

## 5 technology products may disappear in 2020

We have to admit that everyone has seen the rapid development of technology products, they have occupied very important position in our lives and work. So, some experts the next 10 years there will be five major technology products will disappear. No Fortunately now, most of these products have been replaced by smart phones and tablet PCs. So now these popular technology products, they may only become nostalgic products.

ipod

to mac can offer many practical features.

Technology Web site MainStreet consulted five technology analyst, ask which products are likely to be eliminated in 2020.

ipod to

ipod transfer gives you the power to take control of your music and video collection. Let's take a look at these products may disappear:

Video Game Consoles

Popular video game systems such as the Wii, PlayStation and Xbox may still be in homes next decade, but they will look much different. "It looks like analog game systems won't make it until the end of the decade," Enderle says. "You are already seeing the Wii have a tough time holding on to the market and PlayStation has been struggling for a while."

## Standalone GPS Systems<sup>14</sup>

The days of spending \$200 or more on a standalone GPS device won't last much longer, analysts say. Forrester Research analyst Galvin said: "By 2020, the portable navigation systems like TomTom or Garmin may not appear on the market because the phone will be equipped with navigation, car navigation systems also is standard."

## Multi-function phones

Many products on the market may were out due to smart phones, but nothing beats the impact even greater than feature phones. "Creative Strategies' consulting analyst Pakistan HE Lin forecasts, 80% of the mobile phone will be smart phones in 2015. To 2018, the market sold every mobile phones will be smartphones. This phenomenon is mainly attributed to the decline in handset prices and increased carrier revenue.

## Low-End Digital Cameras

Apple's newest phone has a killer 8-megapixel camera that takes in more light and records video at 1080p HD video. Until recently, those kind of specs were unique to digital cameras, but increasingly smartphones are taking over the market. On the other hand, Enderle predicts more expensive and high-tech cameras may have a brighter future, though not by much, as a smaller market of photo enthusiasts seek out professional-quality cameras that go above and beyond what's offered on a phone.

## Recordable CDs and DVDs

"CDs are clearly not going to make it over the next 10 years because everything will shift over to pure digital distribution, so all those shiny discs will be gone," Bajarin says. This will be due in part to more streaming options for music and movies and a greater reliance on digital downloads, combined with more efficient storage options for consumers, including USB drives, external hard drives and of course the cloud.

## E-Readers

E-book reader has considerable progress in a short time, evolving from a product with a keyboard to one with a touchscreen and more recently being integrated into a kind of a tablet-hybrid, but according to Golvin, the market for e-readers will mostly disappear by the end of the decade and the prices are declining rapidly. Just how small the e-reader market becomes may depend somewhat on advancements in display technology. One of the biggest incentives for consumers to buy a pure e-reader is to have an e-ink display (like reading from a book) rather than a backlit display (like reading from a computer screen), but according to Golvin, manufacturers are already working on ways to merge the two reading experiences and create a tablet that doubles as an authentic e-reader.

Among these products, it might be you are using or interested in, then do you have any ideas on this forecast? With the development of technology and progress, which products will be replaced, which products will disappear, which products will appear in front of us? In fact, this prediction let a lot of people feel very sorry, because regardless of past and present, many people are using these products which bring us pleasure enjoyment and experience. ## Top 5 creepy mobile games for your Halloween

Several Android games that are loved by the majority of gamers has strong update. As loyal games fans can not miss these works. While in principle they not have particularly great change, there is no outstanding play too much on the novel, but as a seasonal work is still very timely sale or will be welcomed by many people. The combination of the updated version of the Halloween theme, in this coming Halloween night, it will give you a different Night.

free

mac dvd ripper is easy to use DVD ripping software that designed for Mac users.

We all know Halloween is just around the corner, so why not scare the pants off yourself by playing one of these Android or iOS games? Admittedly there aren't a ton of legitimately scary horror-themed iOS and Android games, but here are 5 that will at least make you think twice about turning off the lights.

mac file recovery

Mystique

Bendroid's Mystique is a three-chapter (so far) horror game aimed at the "Saw" crowd. It features a creepy atmosphere -- complete with ghosts, satanic symbols and a blood-filled bathtub -- and 3D graphics. It's a puzzle game that prompts the player to

use strategy and clues to escape the room ... and then there's chapter two.

#### Silent Hill -- The Escape

Just what we need -- another chapter of Konami's epically eerie Silent Hill franchise. Silent Hill: The Escape is a first-person corridor shooter set in an asylum/maze full of faceless nurses, disturbing sounds and just a dull, flickering flashlight to guide you.

#### Resident Evil: Degeneration

Yeah, it's another zombie-killing game -- but this time, it's a pretty famous one. Capcom's Resident Evil: Degeneration is based on the CG movie of the same name. The survival-horror shooter features 3D graphics, puzzles, and a "shake" method of getting zombies off your back (you literally shake your iPhone to free yourself). It's not the scariest zombie-shooter, but it's still good for a few jumps.

#### Dead Space

Electronic Arts' Dead Space is a new chapter in the Dead Space franchise. The iOS version of Dead Space takes place three years after the original Dead Space (but before Dead Space 2), so Dead Space fans don't have to worry about playing the same old storyline. This bloody Necromorph-slaying third-person-shooter even comes in an HD iPad version for a fuller, more gory experience.

#### Dark Meadow

Phosphor Games' latest title, Dark Meadow, is a first-person horror game with a bit of Infinity Blade-style combat mixed in. The game is set in an abandoned hospital full of demons. Your job is to explore, figure out what's going on (you have some sort of amnesia) and, well, survive. Thanks to gorgeous graphics designed using the Unreal Engine, Dark Meadow is all the more creepy.

#### mac data

recovery software varies substantially with how easy it is for a novice to begin data recovery.

For the festive atmosphere is particularly prominent or important, Halloween is a Western horror festival. On this day we will be wearing strange clothes to scare each other. In these games bring us this new world of terror, hope you can find more fun. In fact, a good game does not have to explain, everyone should try.

## Brand loyalty is the key to Apple's Success

"Forbes" magazine on Monday published a signed article for the Scott Goodso, said: brand loyalty as the key to Apple's success, therefore consumers are always tend to be tolerant to the problems of Apple products, this is mainly due to the user emotional connection and the smart brand concept marketing established by Steve Jobs. You can choose the most suitable software by reading dvd ripper review.

Apple has just launched a software update to fix a problem that was draining the battery life of its new iPhone 4S, something that caused a wave of complaints from customers and critics across the globe.

Of course, it didn't help that Apple apparently took several weeks to even acknowledge the glitch. Or that it came on top of lots of other problems with the new iOS 5 operating system - all of which are now resolved according to the software giant.

But will this damage Apple's reputation? Is there a growing uprising against the Californian company? Are people ditching Apple to go elsewhere? Is its PR team panicking? It would seem not.

You see, whenever Apple has problems with its products, its customers are incredibly forgiving and patient. They understand that issues can sometimes arise and they'll continue to buy Apple products despite any mistakes they might make.

But why is there such a huge loyalty towards Apple?

Well, it's mainly because of the late, great Steve Jobs. Apple is Steve Jobs. Steve Jobs is Apple. People feel like they have a personal relationship with Apple because they're essentially thinking of Steve.

And when you think about how incredibly passionate Steve was about Apple products, ensuring they were of the highest quality and cutting-edge design, you can understand why people are willing to be lenient.

By creating an emotional connection with its customers, Apple has done the near impossible - it has acquired a loyal following. Brand loyalty has played a huge part in its global success.

There's no doubt about that.

So if people will forgive brands that sometimes mess up, how can you ensure your own brand gets the same kind of attention?

Firstly, you have to build relationships with your customers.

And that means being trustworthy and transparent. You do that by embracing the Internet and social media. You can start blogging. You can talk directly to people on Twitter. You can use Facebook to show who's behind your logo. All of that is obvious. A recent example which we experienced first hand was working closely with our clients at Pampers in the USA and interlinked with their internal social media team. There were challenges that were overcome through a smart strategy and the timely and relevant use of social media.

Secondly - and this is the real key to brand loyalty - you have to carry out some movement marketing. You have to stop telling people about what your company makes, and instead think about what you believe in. And what you believe in has to touch a nerve with your target market.

mac dvd ripper can

easily help us so much in a good way.

Jobs did the ultimate brand marketing, he told the world its belief that innovation, to create high-quality products, and has been working to bring the best technology to market. In fact, Apple's mission statement does not really talk about their products, but their beliefs. If you want to convert

## 5 most attractive gaming Apps for Android users

In the field of smart phones, Apple iPhone can justifiably claim to the best-selling smart phone, but we can not ignore the performance of Android phones, it has become the operating system supported by most smart phone manufacturers, which one is better? I believe everyone has their own answers.

ipod

to mac transfer is a good helper for all ipod users. From the mobile phone shipments, price, vendor support and the latest Android 4.0 system point of view, Android phone has been completely than the Apple iPhone.

More and more people become Android fans and i believe there will be more and more people look for a new game to play on your Android smartphone. Because there are so many games, it is hard

to find one that is worth downloading and spending your money, right? Here you can find five most popular games and all of them are so attractive and so interesting.

free

drm converter is an easy-to-use software for free.

### Angry Birds Rio

Sure it may be a tie-in to Rio, the animated movie, but Angry Birds Rio is a much more polished and challenging game than the original Angry Birds. Though you won't be crushing any green piggies in this version, Angry Birds Rio has you freeing feathered friends that a gang of monkeys has captured. If you're an Angry Birds fan, you owe it to yourself to check this version out (just avoid the movie if you can).

### Game Dev Story

One of the more unusual sims out there, Game Dev Story puts you in charge of your own game company. You'll hire designers, artists, and writers in an effort to win the coveted "Game of the Year" award. The first time I opened this game to take it for a test drive, I ended up playing it for 3 hours straight. Better have that charger ready: Once you start, you won't want to put it down.

### Meganoid

"Hard" is an understatement when it comes to Meganoid. The game can be downright brutal at times and, once you beat it, you unlock an even harder set of levels. Meganoid plays very much the way Mega Man does: You have to get from point A to point B without getting hit by any of the dozens of obstacles or enemies that will kill you with a single touch. Players who like challenging games should find that Meganoid satisfies their masochistic desires nicely. Just don't expect to make it through the game without dying at least once.

### Bubble Blast 2

Thousands of levels, easy-to-learn controls, and addictive gameplay--all for free. Bubble Blast 2 is easily my favorite Android game of all time. The point of the game is to pop all the bubbles on screen within a set number of pokes. Not all bubbles will go quietly however, as some will require two or more pokes before they pop. With more than 6000 levels, this game will definitely have you coming back for more.

### Plants vs. Zombies

One of the strangest and greatest tower defense games of all time, Plants vs. Zombies has finally shambled onto Android (albeit through the Amazon App Store). In PvZ, you must defend your lawn, pool, and roof from zombie hordes by means of various plants. Each plant has strengths and weaknesses, and you'll need to master all of them to survive each wave of the undead. The

game is a pretty big download, so you should connect to a Wi-Fi network before making the transfer. Once you have it on your phone, though, those zombies won't know what's hit them.

mac drm

removal software can help you remove drm on mac easily and quickly.

There five popular gaming apps are just for Android users, if you are game fan and you have an Android phone, why not to fully use your smartphone to enjoy a meaningful game trip?

APPLE, HP, then where

Former Apple exec Rubinstein  
i1/4  
recently leave HP.

Jon Rubinstein, the former Apple executive who took over handheld maker Palm and moved with it to Hewlett-Packard in a 2010 acquisition, has left HP

In 2009 he replaced longtime Palm executive Ed Colligan as its CEO, and oversaw a dramatic restructuring of the company's products, including a significant rebuild of its smartphone operating system. Gone was the legacy PalmOS that had been used in so many popular devices like the Treo that for a time competed seriously against Research In Motion's Blackberry.(

dvd to ipad for  
mac)

PalmOS was replaced by WebOS, which first appeared on the Pre smartphone, then later on the Pixi and Veer devices. After HP acquired Palm, WebOS was also used on the abandoned TouchPad tablet, and is now an open source operating system overseen by HP.(  
transfer  
music from ipad to computer)

After HP decided to exit the WebOS hardware business, Rubinstein was assigned to a vaguely described "product innovation role" within HP's Personal Systems Group during a management shakeup last July. It was an unusual move and one made with little explanation at the time. But sources say it was a preface to Rubinstein's departure, one intended to lessen its PR impact when he finally left. "That 'innovation' gig he was given in July was his first step toward the exit," said one source, a former Palm exec with close ties to Rubinstein.

## Something about iBook 2 and iBook Author

Apple introduced the two apps during last month.

With iBooks 2, Apple announced that its first textbooks would be available immediately for \$15. The high school texts will initially come from publishing partners Pearson, McGraw-Hill and Houghton Mifflin, representatives of which were all in attendance at the event.

Apple also introduced iBooks Author, a content creation platform for authors of both textbooks and other

works. (

)At the event, Apple focused on textbook authoring, displaying a What-You-See-Is-What-You-Get application for Mac computers, one that enables writers and publishers to create content-rich books in an application similar to the company's Notes and iWork apps.

Speaking of iBooks Author, Apple recently updated the software, clarifying restrictions on selling books created with the application.

For Cat App on iPad

Many people think cats are mysterious animals.

You may think cats have enough toys that don't cost hundreds of dollars.

Surprisingly, cats tend to be very gentle on the screen and don't really use their claws, and seeing them trying to find the critters on the screen under the iPad is positively hilarious.

Let's see some.

Cat Fishing

Made by Friskies.

The goal of the game is for the cat to tap on the fish. When it does, they disappear. Here, too, there is no sound.(

In Cat Fishing, there's just this screen with one fish, which is replaced by a new one when the cat taps it. There's a "kill count" on the top right corner.

## Game For Cats

If your cats like to play with a laser pointer, they're going to love this. The laser dot moves around the screen at a surprisingly lifelike way, and is really calling out to cats to catch it. The dot is a bit hard to catch, but if they manage to do it, it blows up with a small ding sound, and a new one appears.

To exit the game, tap the paw icon on the bottom 5 times in a row (hopefully your cats can't do this)(

By the way, never forget add some protection for you ipad, just in case.

## Sometime Apple Save Your Money

We all agree that apple stuff cost our money.

Sometimes it will not.

Apple has announced that Paul McCartney will be promoting his new album, Kisses on the Bottom, with a live video stream on Thursday, February 9, at 7 p.m. Pacific. The performance, at Capitol Studios in Los Angeles, will be available on iTunes on Mac and PC, as well as by choosing the iTunes Live option from the Internet menu on the second-generation Apple TV. (

So, whether or not Paul McCartney is your cup of tea, streaming events like this performance-and, in particular, serving that stream to Apple TV owners-are inching us ever closer to the goal of enjoying all of our video content, whether it be recorded or live, using only an Internet connection.

You may see more star alive convert on your apple tv.

## Company have Responsibility to Improve Environment

A company earn more money, feedback more for the world.

Apple, richest enterprise, notice that carbon footprint, improve on the way.(

The company estimates that it was responsible for 23.1 million metric tons of greenhouse gas emissions in the year 2011. According to Apple, 98 percent of those emissions are related to its products' life cycle, with just 2 percent chalked up to the company's facilities.

Since then, of course, Apple has eliminated those materials across its line-up, producing devices that are free of PVC, arsenic, mercury, lead, and brominated flame retardants (BFRs). The company also points out in its latest report that, among its competitors, it is the only one whose entire product line meets and exceeds the Environmental Protection Agency's Energy Star specification for power efficiency.

We are not sure apple is try its best, but at least they try.(

### Apple Plug up Holes by other hands

Flashback attacks the Mac recently.

New java update, solve these problems.(

ipad

photo transfer)

Apple has released another Java update for OS X, this time one that removes Flashback from infected Macs. The Flashback Trojan horse may have infected more than half a million Macs; it could install without a password if the victim merely visited a maliciously crafted website. Apple released an update patching the Java vulnerabilities exploited by Flashback earlier this month. Thursday's additional Java update goes a step further, removing the most common variants of the Flashback malware. Apple unsurprisingly recommends the update to all Mac users who have Java installed. The update is available via Software Update.(

### Browse others Account's files not by Hack

When you log in to an account in OS X, the Finder process opens and allows you to browse files within that account, organize them, delete them, or open them for editing if needed. However, if you can't log in to the account, then browsing its files may be a bit more difficult.(  
best dvd ripper)

Even if you can log in to another account on the same system, the permissions settings for OS X will prevent you from using Finder to browse files belonging to the first account. In other words, if you're logged in and you try to open a folder that belongs to another user account, you'll get an error message telling you you don't have permission to access it. Apple has so far not made it possible in OS X to allow a Finder window opened in one account to be authenticated as a different account.

## Using the root account

The root account in OS X is the main top-level account that has access to all aspects of the system, and as a result can be used to browse any files. It does need to be purposefully enabled, and bear in mind that because it has full access to the system it can be dangerous to use or keep active.

## Launching the Finder under another user account

To avoid using the root account, you can instead open a new Finder instance under the name of the target account, thus getting past the permissions hurdles.(  
icloud sync)

While you will now be able to view the files in the account, there are some limitations to this. The Finder is built so only one instance runs at a time, and as a result its interaction with the mouse when running in this manner has limitations, so while you can browse the files in the account, delete them, and rename them, there are some things you cannot do.

## Tim Cook gradually change the Apple

Tim Cook do something better than Steve Jobs, not too much but really some.

Let's see it: Java.

Oracle, the inherited owner of Java, has generously stepped in to help protect Mac owners from infections like Flashback. There's an important backstory, though, that hasn't hit the headlines. Although Steve Jobs tried for years to get out from under the Java ball and chain, last week Tim Cook finally coerced Oracle into supplying updates for its own software. (recovery mac password) It only took 700,000 infected systems to convince Oracle to handle Java on OS X itself. Steve Jobs dropped Java for the Mac in October 2010, removing it as part of the standard OS X install. The Mac OS X Developer Library post for Oct. 20, says, "The Java runtime ported by Apple and that ships with Mac OS X is deprecated. Developers should not rely on the Apple-supplied Java runtime being present in future versions of Mac OS X." At the same time, Apple stopped accepting apps for the Mac App Store that relied on the Java Runtime Environment. Apple had never supported Java clients in its iOS. Of course, Jobs knew at the time he was blowing smoke -- or perhaps a reality distortion field set in. (

Transfer

Files from iPod to iTunes on Mac) With a few notable exceptions, Java's owner has never supplied versions "for all other platforms." Back when Java started, Sun supplied a version of the runtime for Linux because, as the "father of Java" James Gosling says, "there was no one else to do it." Every other distributor -- Microsoft, IBM, Hewlett-Packard, and Apple -- rolled its own version, based on Sun's reference code.

We can't say that Jobs was wrong, just not so right, Tim's way better.

Do you Use Siri on iphone

Do you still remember what difference between iphone 4 and 4s?

Siri count one.

We asked you, 'As An iPhone 4S Owner, What Do You Use Siri For?' (

file

recovery software)The response was fair but the majority of those who commented aren't very impressed with Siri. We had complaints over the understanding of accents and certain words, complaints over limited functionality in certain countries, and, above all, people suggesting it was nothing but a novelty.

Far be it from me to question the choice of Fox News, but the fact that Siri will answer pretty much any question, no matter if it's for nefarious purposes, is an interesting one. As is the suggestion that everything you ever say to Siri is recorded. Owning a smartphone does mean giving up a certain amount of privacy, but the amount required by Siri is clearly too much for some.

Mark, who happens to be my boss here at MakeUseOf, also deserves a mention for his complaint that Siri doesn't always understand his Scottish accent. And Luna gets a mention for reminding us all that Siri is more knowledgeable about some countries than others.(

Just wait for iphone 5, maybe they have some special function, and you need that.
