Is Apple Going to Release ios5 system on WWDC in 2011?

On June 6, 2011, Apple's annual WWDC (Worldwide Developers Conference) conference will be held in San Francisco's Moscone West Convention Center. At the meeting, in addition to 100 tech seminars, over 1000 Apple engineers and developers will communicate face to face.

WWDC was very popular among Apple's global users and digital enthusiasts, what they concerned was nothing but the new products and new services brought along with the opening speech. In last June, Jobs released iPhone 4 by himself, stirring up a overbearing tide in mobile phone market. And this year, what kind of surprise WWDC will bring us? Let's make some prediction.

Conjecture 1: release ios5 system

Ios5 is the most credible rumor till this moment. Judging from Apple's rules of releasing new products and services, ios5 will be published on this WWDC, and till this summer or even Autumn, ios5 will be equipped with the new launched products, after that, the existing iPhone4 and iPad2 will be provided with an official upgrade.

"Open" and "clouds computing" is currently counted as the key words of ios5 with "consensus". the former includes that Apple will provide developers with greater operational space (although the exist space and App store mature marketing model has satisfied them a lot). Obviously, such a strategy is aimed to compete against the strong development of Android. Android's rapid improvement, plus its open attitude based on internet, providing their manufacturers and developers with much greater possibilities in the future, which becomes the most competitive modal against iTunes and App Store, that is why Apple must plan before hand.

In addition, many foreign medias and users predict that ios will be equipped with a special standby interface, which will reduce the steps when selecting appropriate functions, and you can view the messages, emails and calendar info. directly on the interface. Or this can be achieved with Widget. Although there is no support on such a prediction, it's self-evident that it will be much more convenient. Or we can say that, it's more like an expectation of users, after comparing with Android'd products.

As for "clouds computing", which is of course the theme of mobile internet era, every manufacturer is doing this, but it is more important to see Apple "how to do it". Among the previous discussions, Find my Friend, Apple's music service (the cloud-based music service), Media Stream and even 3G-networks-based FaceTime functions were the subjects. But if considering Apple's current

situation, SNS is the weakness while music is the traditional strength, how does Apple choose to develop its weakness on "clouds computing", we still need to wait and see.

Transfer Movie to iPad

From the Apple iTunes online store, the owners of a video-ready iPad can buy a large assortment of videos to enjoy on the move.

Many people, however, may already have computer video files that they would like to use with the iPad. Is there any way to transfer

movies to ipad? The answer is absolutely yes. iPad Converter can make the videos you already own compatible with your iPad so that you can enjoy your favourite videos with your iPad through just a short conversion.

Step-by-step Guide: How to Transfer Movie to iPad?

Preparations: Download iPad Converter and then install and run it. You will see the interface as below. Then click to run iPad Video Converter.

Step 1. Add files

Click Add File(s) button on the toolbar, select video or audio files you want to convert in the dialog box that opens, and add them to the file list.

Step 2. Select output format and folder

Choose one or more files in the file list, and open Profile drop-down list, then select an output format for selected files.

Click Browse button, select a destination folder in the dialog box

that opens, and click OK.

Step 3. Transfer movie to iPad

After finishing the above settings, check the files needed to convert in the file list, and click Convert Checked Item(s) button on the toolbar to start converting the files.

Tip: You can edit your video files before transferring them to your iPad.
