3 steps to show you how to put videos on ipad

You

just got

an ipad, and can't wait to put your favourite

videos on it, but they can't play well. You are helpless at the

boring video formats. This time what you just need is a converter

to convert video to ipad. With it, you can convert all kinds of

videos to ipad compatible formats so that you can enjoy your

videos anytime

anywhere.

You can use iPad Converter Suite or Video iPad Converter to

convert video to

ipad.

For Mac users, you can use iPad Converter Mac or

Video Converter iPad Mac.

Here below is a step by step

guide:

Guide:

How

to Put Videos on iPad

Step 1: Run Programs

Run the program and then select

the button of "Video to iPad".

Step 2: Output Settings

Click "Open file" to import the video files you want to put

on iPad, choose the output format from the "Profile" drop down

list. Then click "Output" to choose an output folder to save the

converted files.

Step 3: Start Conversion

Click the "Convert" button and you can get the work done very

soon.

The last step is connecting your iPad to PC to put the converted movies to iTunes and sync the videos to iPad. That's all for how to put movies on iPad. Is that easy and convenient?

Here i introduce the two software to you:

Video iPad Converter: iPad Video Converter is the easiest-to-use Video iPad Converter software with fast conversion speed. It can convert almost all video format, e.g. DivX, XviD, MOV, rm, rmvb, dvr-ms, MPEG, WMV, AVI to iPad Movie / iPad Video format. With this Video iPad Converter, you can convert video to iPad in the easiest way and enjoy your favorite movies on your iPad as a MPEG-4 Player freely.

Video iPad Converter Features

Support almost all video file including DivX, XviD, MOV, dvr-ms, rm, rmvb, MPEG, WMV, AVI ... to iPad video (MP4/H.264 format)

Support various iPad video size including H.264 video up to 720p, 30 frames per second, Main Profile level 3.1 with AAC-LC audio up to 160 Kbps, 48kHz, stereo audio in .m4v, .mp4, and .mov file formats; MPEG-4 video, up to 2.5 Mbps, 640 by 480 pixels, 30 frames per second, Simple Profile with AAC-LC audio up to 160 Kbps, 48kHz.

Support any video file that can be played under Windows Media Player properly.

"Drag and Drop" functions are supported by this Video iPad Converter.

Cool UI skin available.

dvd to ipad converter: iPad Converters includes two software packages, the "iPad DVD Ripper" and "Video Converter for iPad". It is a nice choice to get all the DVDs and videos you want onto your iPad

quickly, easily, and with absolutely zero hassle. You will be able to enjoy your favorite DVD movies and video clips on your iPad wherever you go.

An Effective way to print from ipad easily

Ipads are more and more popular due to its powerful functions and amazing appearance. It makes life easy and effectively. We can get all kinds of video, music, ebooks, games on it, and enjoy them everywhere. With it, we live a more convenient and interesting life.

Among other things, the iPad is a great way to save paper: It lets you carry around all kinds of digital documents that you might otherwise have had to print.

But from time to time you may still need to print data that's on your iPad-- business documents that you created in Pages and Numbers, for example, or driving directions to hand someone who's not packing silicon. Printing from the iPad can be easy if your needs are modest, but even if you require extensive printing control, there is, as they say, an app for that.

(The following steps work for any iPad, including the iPad 2 and both Wi-Fi and 3G models.)

The basics

Even though you can add a USB port to your iPad with Apple's iPad Camera Connection Kit, it's no use plugging in a USB printer, because iOS doesn't know how to talk to printers via USB. Some printers have built-in Wi-Fi (a natural match for the iPad). But for the rest, you'll need a computer or other proxy device to serve as a conduit for iPad print jobs: your iPad connects wirelessly to your Mac (or other device), and that in turn connects to the printer.

import video to ipad

But the communication channel is only part of the picture;

you also need software that knows how to send data to the printer in the right format. Starting with iOS 4.2, Apple built printing support into the iPad with a technology called AirPrint. Any app that has been updated to take advantage of AirPrint can print wirelessly to a compatible printer with a couple of taps.

For reasons that only Apple knows, the initial implementation of AirPrint works with just a handful of newer HP printers that support something HP calls ePrint. If you happen to have such a printer (HP has a list of them on its Website), and it's on the same local network as the iPad, your iPad will be able to see it and print without any special configuration. (ePrint also gives your printer a private e-mail address, so you can also e-mail a document as an attachment, and it'll print automatically.)

If you aren't fortunate enough to have an HP ePrint-compatible printer, however, you can still use AirPrint with the vast majority of printers. All you need is a bit of extra software that runs on your Mac.

Activating AirPrint

Two such applications are quite similar: Collobos Software's FingerPrint and Ecamm Network's Printopia. Install either of these utilities on a Mac on your network, select the printer(s) you want your iOS devices to be able to use, and you can then print to those printers from your iPad just as if they were HP ePrint printers. Both of these tools let you print from your iPad to any local or network printer; they also let you use the Print command to send documents to your Dropbox or a folder on your Mac in lieu of a printer.

dvd to ipad converter

However, the two applications do have their differences. FingerPrint requires OS X 10.6 or higher, and it has an option to "print" directly to iPhoto on your Mac. But before a printer appears in FingerPrint, it must be shared using the Print & Fax pane of System Preferences. Printopia supports OS X 10.5 or later, works with any printer (shared or not), and can send files from your iPad to a PDF or PNG file on your Mac (much like OS X's print-to-PDF capability).

As of

version 2.0, it also lets you "print" not only to iPhoto but to any Mac application, save files to any number of folders on your Mac, use any PDF Workflow on your Mac (such as e-mailing PDFs--click the PDF pop-up menu in any OS X Print dialog to see all your options), and configure printer settings. For all of those reasons I greatly prefer Printopia.

Another option exists, too, and it's even free (donations requested): Netputing's AirPrint Activator. But although it serves the same basic purpose of enabling AirPrint to use any printer your Mac can see, AirPrint Activator has a rather tedious setup process, and doesn't offer a way to print to Dropbox or to a folder on your Mac.

Printing with AirPrint

Once you have either an ePrint-compatible printer or an AirPrint enabler set up, printing from your iPad is simple:

First, look for the Print command. Assuming an app has been updated for AirPrint support, this command is in there somewhere, although the location varies--sometimes it appears when you tap a button with the word Print or a printer icon on it, other times it may be in a popover that appears when you tap a Tools, Send, or Action icon. (When in doubt, check the app's help.)

Next, if this is your first time using AirPrint, or if you want to switch printers, tap Select Printer and then tap a printer name. The printer you select becomes the new default printer, meaning you can skip this step next time if you want to use that printer again.

To change the number of copies, tap the plus (+) or minus (-) button. If the document has more than one page, you can limit which pages print by tapping Range and selecting the start and end page numbers. When you're done, tap on Print.

Your document will begin printing. While that is in progress, you can double-tap the Home button and then tap the Print Center icon to view and manage your print jobs; Print Center disappears when printing is done.

So with the above steps, you can get papers from your iPad. Is it amazing? Want to know more? Here I get other pieces to show

you.It's about some software about ipad.

A Simple Guide on How to Convert DVD to iPad

You are a DVD lover with all kinds of amazing DVD videos in your room? You can't help seeing the latest DVDs, but you have no idea about how to put them on your new ipad? Then this article could help.

We need to rip DVD first and then convert DVD videos to formats that supported by iPad.You can use iPad Converters which also called

dvd to ipad converter. It includes two software packages, the "iPad DVD Ripper" and "Video Converter for iPad". It is a perfect choice to get all the DVDs and videos you want onto your iPad, quickly, easily, and with absolutely zero hassle. So with this single package, you will be able to enjoy your favorite DVD movies and video clips on your iPad wherever you go.

Features

All-in-one iPad conversion solution

Clean and simple layout

Supports all video and DVD formats

Detailed video and audio output settings

Support "Drag and Drop"

Fast conversions

Inexpensive

Here is a guide for you. This step-by-step guide will show you how to rip DVD and convert DVD to iPad with iPad Converters, and transfer them to the iPad for enjoying on-the-go.

Step by Step Guide:

How to Convert DVD to iPad?

Step 1. Download and install iPad Converters, click the "DVD to iPad Converter" button. See the interface as follows and you are ready to convert DVD to iPad now:

Step 2. Click "Open DVD" button to select the DVD videos which you want to convert to MPEG-4 format for your iPad.

Step 3. To convert DVD to your iPad, we also need to select MPEG-4 as the output video format. At the same time, you can crop your video to 16:9, 4:3, full screen, etc. You can resize your video. For example, you can set it to "Keep aspect ratio" or "Stretch to fit screen."

Step 4. After you have finished all the settings, you may start the conversion by clicking "Convert" button.

If you want to convert video to iPad, you may see how to put videos on iPad.

Amazing Google+ iPhone App: Useful Tips

Do you know G+? G+ is a shortened form of Google+, which is a free app just arrived on the iPhone. Its goal is to share the fun of real life experience more easier, and to narrow the distance between people so that everyone can exchange just like in real

life.

Almost a month after Google announced its new social network, the Google+ iPhone app is finally available in the iTunes App Store. Those who downloaded the app Tuesday when it first went live complained of a litany of bugs. Google has since released an update, fixing many of the errors.

The Google+ iPhone app is impressive-it has a fairly intuitive interface, a clean design and a few cool features unique to the mobile version. And while any iPhone user can download it now, only users with Google+ invitations can currently use it.

Here's a look at five things you should know about the Google+ iPhone app, from changing your location settings to uploading photos, and a few tips to help you along the way.

1. View Your Google+ Stream Three Ways

When you open the Google+ iPhone app, the home screen displays five features: your stream of updates; Huddle, the feature that lets you chat among your circles; photos; your profile; and your circles. Tap "Stream" to access three views of updates.

The first view of your stream includes updates only from Google+ users in your circles. Visually, it looks a lot like Facebook's iPhone app with the user's photo next to their update, an excerpt from a link they attached and comments from other Google+ users.

Swiping your finger across the screen from right to left will change the view of your stream to something unique to the Google+ iPhone app: incoming messages from people near your current location.

Swiping your finger once more from right to left will change the stream view to "Incoming," which includes posts from everyone who has put you in a circle.

2. Google+ Check-Ins

At the top right of the app you'll see two icons: a checkmark and a pencil. Tap the checkmark to load a list of locations near you and check in.

By default, check-in privacy is set so only those in your circles can view it. You can change this by tapping the "Your circles" bar. You can also attach a photo from your camera or take a picture.

Unlike Foursquare or Facebook check-ins, there are no deals attached to checking in, though it's likely that feature will come soon. Clicking on a location from the mobile app will load the corresponding Google Places page.

3. Remove Your Location from Google+ Updates

While the Google+ iPhone app may limit your location to only your circles, by default, all your mobile updates will include roughly where you are. Here's how to remove your location: Click the pencil icon in the top right to create a new post. Your location is listed just above the camera icon on the bottom. Click the X next to it. This bar will now read "No location attached."

There does not seem to be individual settings for the Google+ iPhone app, which means if you never want your location attached to an update, you will need to turn it off every time.

4. Comment On, +1 and Mute Google+ Posts

One part of the Google+ iPhone app that needs tweaking is the interaction with posts in your streams. Unlike Facebook's iPhone app, there are no buttons within your streams that let you comment on, +1 or mute someone's post. Instead, you need to tap the individual's post, which will take to you a new page, in order to comment.

This new page includes a +1 button at the top, as well as a drop-down menu at the bottom with options to mute or report the post. One big feature that is missing: the ability to share posts from within the app.

5. Uploading Photos to Google+

While you can attach photos to any update, you can also upload ones individually or in bulk via the Photos button on your Google+ home screen. One cool feature: Your photos homepage displays four albums ("From your circles," "Photos of you," "Your albums," and "From your phone) and flashes the images in a slideshow you can view from this screen.

The Google+ iPhone app makes uploading pictures from your phone particularly easy. Tap the album "From your phone." This will load all the photos you have stored on your iPhone. Then tap the individual pictures to select them and click Share.

For a first release, the Google+ iPhone app is pretty solid.

It's still early to see how the group chat feature, Huddle, will take off, but as Google+ opens the flood gates to more users, this is likely to become a popular element.

Mac App Stores---Experience A Different way of Life

Do you know Mac App Store? It is popular lately. With the Mac App Store, you can get what you want on your Mac easily. No more boxes, no more disks, no more time-consuming installation. Click once to download and install any app on your Mac. The Mac App Store is now available as a software update for any Mac running Mac OS X Snow Leopard.

The Mac App Store is just like the App Store for iPhone, iPod touch, and iPad. So it's as easy to find and download Mac apps as it is to add your favorite magazine to iPad or a new game to iPod touch. You can browse Mac apps by category, such as games, productivity, music, and more. Or do a quick search for something specific. Read developer descriptions and user reviews. Flip through screenshots. When you find an app you like, click to buy it.

Apple has informed registered Mac and iOS developers that the App Stores for both platforms are now available in 33 more countries. As of these latest additions, the iOS and Mac App Stores can now be accessed in 123 nations around the world.

The newest places to join the App Store include Algeria, Angola, Anguilla, Antigua and Barbuda, Azerbaijan, Bahamas, Bahrain, Barbados, Belarus, Belize, Bermuda, Bolivia, British Virgin Islands, Brunei, Cayman Islands, Cyprus, Dominica, Ghana, Grenada, Guyana, Iceland, Montserrat, Nigeria, Oman, St. Kitts and Nevis, St. Lucia, St. Vincent and The Grenadines, Suriname, Tanzania, Trinidad and Tobago, Turks and Caicos, Uzbekistan, and Yemen.

Not every app is available in every international App Store, either due to licensing restrictions or the preferences of individual developers. However, the vast majority of apps will find their way onto the virtual store shelves of the App Store

around the globe, so newcomers ought to have plenty of software from which to choose.

Residents of these 33 countries will, I suspect, be pretty pleased with this development. It can be very frustrating to own an iPhone in a country which does not have a local version of the App Store. As the U.S. store requires a U.S. credit card, and doesn't even allow PayPal accounts funded by cards from other countries, iPhone users in App Store-less countries have only the few default apps that Apple ships the device with and free Web apps.

Local versions of the App Store will finally allow customers in these countries to use their credit cards to make purchases, even though the prices on most of them will be listed in U.S. dollars and the language will be English. Additionally, the mere presence of the stores will likely help spur iOS and Mac developers native to these countries, not only by providing an avenue to sell their wares, but also by prompting them to develop apps that are specifically useful for their fellow citizens. And, of course, Apple and developers can expand its reach to a bunch of new potential customers.

So if you are reading this on an iPhone somewhere in Nigeria or while sunbathing in the Cayman Islands, fire up the App Store and start browsing. I'm sure you'll find something that catches your fancy.

A Useful guide on Downloading YouTube Videos to iPad Easily

YouTube is one of the most popular video format now. I'm a

YouTube fan, especially like watch funny videos there. Recently I bought an iPad and was wondering how to download YouTube videos to iPad so that i can enjoy my favourite films wherever i go.

As we all know, YouTube is a video-sharing website on which users can upload, share, and view videos. It is one of the most popular websites that offer streaming videos. If you want to free download YouTube videos to iPad and convert YouTube videos for iPad, this tutorial may help you. It is composed of the following two parts:

Part 1: How to Download YouTube Videos to iPad?

Part 2: How to Convert YouTube Videos to iPad?

Part 1: How to Download YouTube Videos to iPad?

If you're using Safari, there's an easy way to download YouTube videos. Open the page with the movie and press Command-Option-A, which shows the Activity window. If you're also loading other sites, you'll see a list of them: scroll until you find the YouTube page and click on the arrow to show details about what is being loaded.

You will certainly notice an element whose size is over 0.5MB. Double-click on it, and Safari will download it. When the download is over, navigate to the file in the Finder and add the extension .flv to its name. Now you need to convert YouTube videos to iPad.

Part 2: How to Convert YouTube Videos to iPad?

To convert YouTube videos to iPad, you need to get help from an YouTube Video to iPad Converter. Here we recommend you Cucusoft iPad Converter Suite, which can convert various video to iPad compatible format from all popular video formats including DivX, XviD, MOV, rm, MPEG, WMV, AVI, etc.. Just follow the step-by-step guide below.

Step 1: Download Cucusoft iPad Video Converter Suite and install it.

Step 2: Run the program and select the second icon on the right to choose Video to iPad Converter.

Step 3: Click "Open file" button and set the output format in "Profile" list, then set output folder in "Output" area.

Step 4: After choosing the format, you just need to click click "Convert" to start conversion.

When conversion done, simply transfer the converted files to

iTunes and then sync to iPad. That's it!

Powerful New iLife Updated for New Mac

Hey! I get some fresh pieces here to show you. It's about the Apple iLife. Do you know it? It's a new software which run on Apple Mac. It includes three parts: iPhoto, iMovie and GarageBand. Its latest version is iLife 11. With it, you can have great fun really.

As with every Mac in recent memory, Apple's latest hardware releases, the MacBook Air (Mid 2011) and Mac mini (Mid 2011), include the current versions of Mac OS X and iLife--in this case, Lion (OS X 10.7) and iLife '11. (Interestingly, the new models include only iPhoto, iMovie, and GarageBand. iWeb and iDVD are nowhere to be seen.) But these new models don't include a DVD or thumb drive for reinstalling that software.

If you ever have a problem that requires you to reinstall the OS on one of these models, you use the new Lion Recovery feature to boot from a hidden recovery partition of your hard drive and download Lion on demand. Unlike older Macs running Lion, these new models also feature a special version of Lion Recovery, Lion Internet Recovery, that works even if your entire hard drive went south and you had to replace it--you essentially boot your Mac over the Internet, download Lion, and reinstall. When you're back up and running, you can launch the Mac App Store and reinstall the iLife apps, which will be listed on the Purchases screen.

When you reinstall Lion via Lion Recovery, it seems Apple uses

information about your Mac's hardware to verify that it has a license for Lion. But what about iLife? When you first set up one of the new Macs, you're prompted for your Apple ID and password. That information is sent to the Mac App Store, which adds licenses for the iLife '11 apps to your Mac App Store account.

But as we've explained when covering the Mac App Store, the license for Mac App Store-purchased software lets you install that software on any Mac authorized with your Apple ID. Purchase an app on your laptop, and you can launch the Mac App Store app on your iMac, click the Purchases button, and install that same app without having to purchase it again.

The iLife license you get when you set up one of the latest Macs is no different. Which means that if you haven't yet gotten around to upgrading to iLife '11, buying a new Mac mini or MacBook Air essentially gets you iPhoto, iMovie, and GarageBand for all your Macs running OS X 10.6.6 or later (since you need at least that version of Snow Leopard to run the Mac App Store). And this isn't sneaky or dishonest--it's right there in the Mac App Store's software license.

Of course, this isn't exactly the same as buying the boxed version of iLife '11, since you don't get iWeb or iDVD--you might even use the latter if one of your other Macs still has an optical drive. But it's tough to complain that you aren't getting enough free software.

Cybernet iOne H5: Propel Conformable Business PC

An all-in-one, widescreen PC that's perfect for multitasking! Use it as a medical all in one PC, EMR computer, or industrial all in one PC. View multiple data sets or use several software applications at one time on its 20-inch widescreen display. The iOne-H5 has an optional touch screen with single- or multi-touch for even greater productivity, and outstanding digital media support for high-definition video and 3D graphics. With exceptional power, speed, and reliability, you can free up space while maximizing performance.

Cybernet's iOne H5 is basic on the outside and powerful on the inside. This business-oriented all-in-one desktop PC outperforms all of the other machines in its category, and has a slick swivel stand and a touchscreen to boot.

Our review model (\$1332 as of July 25, 2011) came packed with an Intel Core i7-860 processor, 8GB of installed RAM, a 500GB hard drive, an ATI Mobility Radeon HD 5730 graphics card, Wi-Fi and Bluetooth, a DVD-RW drive, and a 20-inch touchscreen. The iOne H5 runs a 64-bit version of Windows 7 Ultimate.

When it comes to performance, the iOne H5 doesn't disappoint.

On PCWorld's WorldBench 6 benchmark tests, the iOne H5 earned a score of 133--17 points higher than the score our top-rated budget all-in-one PC, the HP Compaq 6000 Pro, managed, and 40 points higher than the mark our number two budget all-in-one PC, the HP TouchSmart 310, collected. The iOne H5 costs about \$380 more than the Compaq 6000 Pro and about \$600 more than the TouchSmart 310.

In PCWorld's Unreal Tournament 3 graphics tests, the iOne H5 managed a frame rate of 50.9 frames per second (at high quality settings and ascreen resolution of 1680 by 1050 pixels). On the same test, the HP Compaq 600 Pro only managed 35 fps at the same settings, and the HP TouchSmart topped out at 10 fps.

The iOne H5 is housed in a shiny black chassis that sits on an extremely flexible stand. A thick black bezel (containing an integrated webcam) surrounds the 20-inch touchscreen. Most of the ports are located on the bottom of the screen, rather than on the back, which is good for wall-mounting but not so convenient otherwise. Luckily, the stand is very flexible--you can swivel the screen 60 degrees on either side, and tilt it through a 65-degree range.

On the bottom of the screen are buttons for volume up, volume down, brightness, contrast, mute/back, and menu/enter. Beneath these buttons are most of the ports, including four USB ports; HDMI-, DVI-, and VGA-out ports; two gigabit ethernet ports; three

audio jacks (line-in, audio out, and mic); and support for hooking up an antenna and composite video. On the right side of the screen you'll find two additional USB ports (for a total of six USB ports) plus a power button; on the left side of the screen is the optical drive. Like most other all-in-ones, the iOne H5 doesn't offer many upgrade options, but two mini PCIe slots are available.

Two built-in 2.5-watt stereo speakers sit below the screen.

The audio is neither loud nor very full, and voices sound a bit tinny; I recommend adding an external audio system.

The 20-inch widescreen touchscreen is big, bright, and glossy, with a native resolution of 1920 by 1080 pixels. It uses a five-wire resistive multitouch touchscreen, in which a polyester coversheet overlies the glass. You can see the coversheet flex as you touch the screen, and the touchscreen requires a bit more force than, for example, the iPhone's capacitive touchscreen). I found that I much preferred using a regular mouse. The screen itself is not too reflective. Off-axis viewing angles are decent--a good thing considering the wide range of the swivel stand. Colors looked good, though they tended to appear a tad washed-out.

The iOne H5 comes with a basic wireless keyboard and wireless mouse. The keyboard is matte black and features wide, flat, extremely light keys. Because the keys lack good feedback, typing accurately and quickly isn't easy. Additional buttons to the right of the keys include a music button, play/pause, volume up, volume down, and mute. The three-button optical mouse is quite light, making it responsive and easy to use.

The Cybernet iOne H5 is a business budget all-in-one PC that delivers very well on graphics. Though it's not the sexiest machine you'll ever see, and it has no stand-out features, it does offer a powerful processor and graphics card that can handle whatever you throw at it--even gaming. Of course, most people looking to buy the iOne H5 probably aren't gamers.

Converting DivX to iPad Mac in 3 Steps

Are you looking for a Divx to iPad converter? The iPad Video Converter for Mac is just what you need. It is professional and simple to use. With it, you can convert DivX to iPad on Mac and also easily convert MPG, MPEG, MPEG2, VOB, RM, RMVB, WMV, ASF, MKV, TS, MPV, AVI, 3GP, 3G2, FLV, MPV, MOD, TOD and HD video to iPad compatible video/audio format.

The guide below will show you how to convert DivX to iPad format on Mac with the iPad Video Converter for Mac step by step.

Guide: How to Convert DivX to iPad on Mac

Step 1: Import DivX Files

Run the software and import the DivX videos you want to play on iPad from Mac by clicking the "Add" button.

Step 2: Set Parameters

To get the best effect when playing the DivX videos on iPad, you should select the "iPad Video MP4" as output format from "Profile" drop-down list. Then set the destination folder to place the converted videos. In this step, you can also "Trim", "Remove", "Clear" the videos as you like.

Step 3: Start Conversion

Start to convert DivX to iPad Mac by pressing the "Convert" button.

When the conversion done, connect your iPad and open iTunes, then sync the converted videos to your iPad. That's all! Now you can watch DivX on iPad Mac anytime and anywhere as you like! With the Mac DivX to iPad Converter, you can also convert MKV for iPad on Mac, convert FLV to iPad on Mac, convert WMV to iPad on Mac, etc. easily and quickly!

A Brief Introduction of Apple iCloud

When Apple iCloud is on the way, do you know what it is? What is its main functions? Perhaps you know little about it, here is a brief introduction of it, you can have a look.

With Apple revealing iCloud price details along with the beta version of iCloud.com, now seems like a good time to explain what the service is to anyone who missed Apple's announcement in June.

iCloud basics

iCloud does not replace local storage on iPhones, iPads and iPod Touches. What it does is keep your data in sync between any Apple device or PC that you own. For example, if you're writing a document in Pages on an iPad, that document will automatically be available for editing on your iPhone or a PC, with no need to transfer files by e-mail or USB.

iCloud also remembers your device's settings, apps, home screen layouts, ring tones and text messages, so all of that information is available if you upgrade or replace your iPhone or iPad. Think of it like the backup function in iTunes, but through the Internet instead.

Which apps use iCloud?

Apple's iWork productivity software - Pages, Numbers and Keynote - can sync documents through iCloud. Contacts, Calendar and Mail will also be updated automatically across multiple devices. A new service called Photo Stream allows you to download your 1,000 most recent photos to a computer or other iOS device for 30 days. You can also store a device's entire camera roll in iCloud for longer.

Third-party apps will be able to use iCloud as well. Rovio, for instance, could make Angry Birds data available across devices so your iPhone and iPad will show the same progress through the game. It's up to developers to implement these kinds of features.

What's included for free, and what costs extra?

Apple will provide 5 GB of iCloud storage for free, but iTunes music, apps, books and Photo Stream don't count against that total. iCloud storage is consumed by documents, mail, app data, your full camera roll, settings and other device information. Additional storage costs \$20 per year for 10 GB, \$40 per year for 20 GB and \$100 per year for 50 GB.

Apple suggests that 5 GB of storage should suffice, but that depends largely on whether you're storing lots of photos and videos on your Camera Roll, and how much app data you're backing up. The former should be easy to determine - you can already see in iTunes how much data is used by photos and video - but the latter will be harder to pin down until we see how many developers adopt the service.

Who is this for?

People who own multiple iOS devices will get the most out of iCloud, because it saves the hassle of manually transferring data between iPhones, iPads and so on. Owners of a single Apple device may still appreciate iCloud's automatic backup function, which makes replacing hardware easier.

iTunes is separate

One possible point of confusion with iCloud is how iTunes purchases factor into the service. When you buy music from iTunes, it can be automatically synced to all of your iOS devices, and it won't count against your free storage. A paid service called iTunes Match is completely separate from iCloud, and syncs any music you haven't purchased from iTunes for \$25 per year.

When will this be available?

iCloud arrives this fall, alongside iOS 5.

Apple Beats Nokia and Samsung,Becoming top Smartphone Maker

For the past few years, many had witnessed the huge advances in mobile handset technology as well as the big increase in the number of smart phones and advanced mobile phones released into the mobile market place . One of the most popular handsets to hit the market in recent years has been the Apple iPhone, with popularity soaring due to its high quality touch screen and massive range of applications that can be downloaded from its apps store.

Apple Inc. (AAPL) added another feather to its success story as it outsold Nokia Corp (NOK) and Samsung to become the largest smartphone maker in the second quarter of 2011 in terms of global shipments of smartphones. Research firm Strategy Analytics confirmed Apple's iPhones to have grabbed an estimated 18.5% market share, compared with 13.5% a year earlier.

Apple shipped 20.3 million iPhones in the second quarter, ahead of Samsung, Nokia, RIM, HTC and others, in that order.

In the first quarter of 2011, Apple shipped 18.7 million iPhones, second to Nokia's 24.2 million smartphone shipments. Notably, Nokia is undergoing a transition to the Windows Phone platform, away from its Symbian devices. But it won't have Windows Phones out until late this year.

"Demand has been so strong that even [iPhone] models that have been out for one or two years are still being sought out," Llamas noted. "With an expected refresh later this year, volumes are set to reach higher levels."

IDC said Apple's success stems from selling iPhones through more than 200 carriers in 200 countries, as well as its increased manufacturing capacity. While Apple has reached the top spot, it is still below Nokia's single-quarter record of shipping 28 million smartphones.

Samsung, in second place with 17.3 million smartphones shipped in the second quarter, saw 380% growth over the second quarter of 2010. Part of the reason is Samsung's popular line of Galaxy S smartphones, based on Android, IDC noted.

Apple's ability to spur the popularity of the smartphones in developing nations, where it's less successful, will help dictate the company's smartphone fortunes in future.

It has also been rumored that the company is looking to launch

the iPhone 5 in September. The hype around the new iPhone has already scaled new heights and if Apple can realize revenues from iPhone 5 for an entire month (if it chooses to release the product in early September), it will be major revenue driver going forward.

As Apple remains heavily dependent on iPhone and iPad sales (68.8% of the third quarter revenue), the company is taking every possible step to safeguard its dominant position in the smartphone and tablet market.

Apple remains entangled in a number of lawsuits against Eastman Kodak (EK), Amazon.com Inc. (AMZN) and Microsoft Corp. (MSFT) over a number of issues. As the outcome remains uncertain, we believe the lawsuits will remain an overhang on the stock going forward.

We maintain our Neutral rating over the long term (6-12 months). Currently, Apple has a Zacks #1 Rank, which implies a Strong Buy rating in the near term.

Apple Mac OS X Quick Start function prosecuted alleged infringement

On August 9, according to foreign media reports, the Florida Operating Systems Solutions Inc. recently accused Apple in central Florida, U.S. District court, alleging that Apple Mac OS X operating system has a violation of its operating system for quick start patent.

The patent describes a method for booting a personal computer including the standard Power On Self Test, or POST that most machines perform, including Apple's Macs running OS X. Operating Systems Solutions Inc. didn't specify in the patent infringement litigation at the specific version of the Apple Mac OS X operating system. However, the company said Apple's sales in the region using Mac OS X operating system, the MacBook Pro Apple laptop computers and other PC infringed its patents. According to court documents, Operating Systems Solutions Inc. requested injunctive relief. The company asked for damages and the immediate destruction of all remaining advertisements, flyers, other promotional activities or advertising content, and other infringing content.

At first glance, the lawsuit seems no different than other patent troll cases that litter the legal landscape--but there are a few oddities that hint at a larger purpose to the filing. For one thing, the patent holder--Operating System Solutions--is an absolute unknown. Even patent trolls typically have websites and a modest online presence; OSS appears to lack even these items. Furthermore, the patent in question was originally granted to LG back in 2002, before being transferred and reissued OSS in 2008.

It's not uncommon for big companies to sell or transfer patents that they don't need, but it's unclear what OSS does, why it acquired the patent, or whether the company even exists as anything but a mailing address. In addition, this is fairly old technology: LG applied for the patent in 1999, and certain submitted drawings refer to Windows 95 as the final booted operating system.

There's nothing obviously wrong with the patent itself, but the court filing doesn't specify which version of OS X allegedly infringes its property or make mention of any negotiating process beyond a boilerplate statement that it notified Google of the infringement. There's been some speculation that OSS may be acting as a proxy for LG, which has its own stake in the smart device race and may have filed suit against Apple in a legal preemptive strike.

The patent was previously owned by LG Electronics, the makers of the LG G-Slate, an Android powered tablet. This has led some to speculate that LG's ties to Android could in fact make this a shell game that is being used to open a line of attack for Android on Apple's OS.

Some of those claims raised by Apple have to do with core

Android features, not just the design of these devices, making the outcome of those suits potentially very impactful on any device running Android.

We'll keep an eye on this suit as it could very well turn into a major part of the battlefield between Apple and Android.

Apple Becomes the Biggest Winner While the three Operators competing for users

Recently, China's three major operating agencies are in the battle of 3G users iPhone. Their business war taking advantage of the iPhone is imminent.

From the performance after the induction of iPhone in 2009, China Unicom's net profit does not show growth in 2010. It is a big challenge for the three major operating agencies to obtain real profits, and give consumers more material benefit in the same time with the growth of iPhone users. If you own an apple ipad,you can try this:

ipad dvd
converter

Behind the back that the three operators contesting against the iPhone, it is the reality that Apple earned big money.

Operators: silent response to rumors

Yesterday, there was news said that One of China Mobile's internal documents shows that mobile will sign a contract about selling the iPhone as early as September, but Which version is not clear. But some insiders believe that because of China Mobile's Standard reasons, they will induct the simplified

version of iPhone 4. And this simple version of iPhone 4 will be achieved mainly by WiFi to enable the High-speed Internet access, so the insiders considered that China Mobile is vigorously building WiFi to meet the current. China Unicom who already had co-operation with Apple will induct iPhone 5. China Telecom may also induct iPhone 5 and simplified version of iPhone 4 on October this year.

There are Data show that Apple earned big money in China region thanks to the favor of the major carriers. The third quarter's fiscal reports in 2011 which was recently released shows that in the first three quarters of 2011, Apple's iPhone sales in the Chinese market has grewed five times, with sales of \$ 8.8 billion, which does not include the Apple parallel machines which enter China by some other ways.

Dilemma: the users rosing with the profits falling

The data from the Industry and Technology Department shows that at the end of May 2011, the total amount of 3G users reached to 73.76 million, and China Unicom took 30% by 22.09 million. In the aspects of competing users, iPhone contributes to China Unicom. But China Unicom's profit falls sharply with the growth of the users. According to the first quarter's fiscal reports of China Unicom which announced on April 26, China Unicom revenues 490.3 Billion yuan at the quarter, up 21.2%, but the net profit of 1.66 billion yuan, down 86.5%.

To this end, said the insider Yang, apart from the competition between the three operators, how to distribute profits with the Apple company is also a key.

Details of Apple's New Headquarters Exposed, Shocking All of Us

In early June, When Steve Jobs who is still on sick leave announced to the world that Apple will build a new headquarters resembling "Space Shuttle", Apple fans all over the world have been struck by his fancy once again. Yesterday, the Cupertino, California, USA announced the plan submitted by the new headquarters of Apple, according to the latest exposed images and data, Apple's "spaceship" is just what Steve Jobs described as, very cool.

the designer of T3 make the design

The new headquarters is designed by the world-renowned architect Norman Foster, Beijing Capital International Airport T3, that is, from his hand. According to Steve Jobs's plan, the building will use the most advanced technology, using the world's largest glass components, the overall building shape is entirely curved. If you want to convert dvd to ipad, you can try this:
dvd to ipad converter

According to reports from overseas media, Date back to 1983 Steve Jobs already had plans to build a shiny glass buildings surrounded by oak and Lawn as Apple's headquarters, then located in coyote valley of San Jose, he Even found the Chinese architect IM Pei to act as the designer of the campus then.

In 1985, Jobs was expelled from Apple, with the project ended in abortion. But for Jobs, Passion and dreams will not change over time, and Apple has seen better days, holding so many cash, Steve Jobs will have the strength to turn the dream decades ago into a reality.

The whole building without a flat glass

The proposal documents submitted by Apple include four parts: Apple's introduction, siting and design of the park, the ground plan, renderings and so on. The program content displays, Apple's new headquarters covers an area of 175 acres, including an OA research and development building, accounting for approximately 2.8 million square feet, a 1000-seat built-in company auditorium, a company fitness center, a research space of about 30 million square feet, green plants surrounded and a parking lot.

Before this there are media reports, Apple's new headquarters has four floors, with the appearance of a ring, the internal ring is designed as a huge courtyard, the most distinctive place is still Apple's usual glass design, and there are no flat glass in the entire building of the new headquarters, "the price for this form of construction of buildings is not cheap, especially we will build a special building glass in this building, it's pretty cool," Jobs said.

Although the modeling is unique, Apple still did not ignore the energy saving. It is reported that the main building and the top of the underground parking area of the new headquarters will use solar panels to absorb energy, and the whole park will be planted nearly Million trees.

Jobs threat "to build or to move"

It is reported that after the local government disclose the program of Apple's new headquarters, they will make the audit based on how Apple's new park impact on the surrounding Environment and its development. They will hold a public hearing in the Town Planning Board and City Council and it will decide whether to adopt Apple's new campus program.

Mayor Cupertino said that there is no reason to reject Apple's headquarters building plans. However, to take no chance, Steve Jobs has released relentless program that if the new headquarters in Cupertino city can not get through it will be moved to Mountain View, which is Google's headquarters.

According to Apple's plans, the new headquarters will be founded in 2015. According to the Blueprint drawn by Steve Jobs, the "Space Shuttle" will become the world's best office buildings.

Apple's New Patent: the Mac Antenna Hidden Under the Keyboard

Apple is trying to remove the external antenna of the product so that users are not aware of the antenna of Apple products there. A new Apple patent describes a approach to integrate antenna in the keyboard of the MacBook and iMac, that is, the antenna will be placed under the keyboard number keys (as shown in the yellow button).

According to reports from Patently Apple Web site, this is the fourth patents that related to connecting MacBook to phone and network Apple obtained over the past year, also the second antenna-related patents. This means that Apple may launch MacBook which support 3G or 4G networks. Something about iPad:

free

ipad video converter.

Apple has realized that the design and placement of the device's antenna is very important. Last summer, iPhone 4 users found that there is a clear signal reception problem, a user holding the iPhone 4 in some locations will lead to dropped calls. In addition, MacBook Pro users have also found that there are difficulties in connecting to Bluetooth accessories. This is mainly due to the placement problem of the MacBook Bluetooth antenna.

Recently, eBay sellers auctioned a 2007 MacBook with 3G antenna, which was sought after by Apple fans. In this patent, the antenna is hidden under a few keyboard keys in order to improve reception and Emission efficiency. When the user does not click the keyboard button, the antenna should be as far away from the metal conductor. Therefore, in the ideal case, the antenna should be placed in the less frequently used keys, for example, the print screen key.

According to Apple's description, an antenna can be placed in more than one button, the device will judge which antennabe should be used according to the signal strength and other indicators. This patent does not indicate which antenna can be placed under the keys, this may be WiFi or Bluetooth antenna, or cell phone antenna. The wireless signals the Antenna can receive depend on the antenna configuration.

Industry insiders estimate that in the future the iMac keyboard may use the patent to improve the performance iMac connecting to Bluetooth Device. WiFi or cell phone antenna may be integrated in the MacBook's keyboard. Through this ways, MacBook users will not need to use the iPhone as a WiFi hotspot.

Apple's already preparing for the production of the third generation of iPad in October

When HP give up the Tablet PC business, Apple's already preparing for the production of the third generation of iPad. Previously, news from Taiwan's upstream supply chain said that Apple canceled the second half year's supply plan of iPad 3. But recently the latest news said that Apple intends to pilot iPad 3 from October, to stay ahead of the Tablet PC market competition. It was reported that Apple has adopted an order of the display panels, chips and other major components which iPad 3 use, and it is working with the Asian component suppliers and assemblers, readying to start production of iPad 3 from October. iPad 3's display remains 9.7-inch, it will use display of higher resolution, that is 2048×1536 pixels, and will be thinner than iPad 2. It may be Launched early next year. New iPad tip: add fonts to ipad

It was said by an Apple supplier that long before the fourth quarter of last year, Apple has issued an order of about 1.5 million parts iPad 3 required.

Apple's previous generations of iPad has been affected by capacity constraints, and is often in short supply, although Apple usually purchase parts from suppliers in advance. An analyst has said that iPad 3's high resolution panel is mainly supplied by Sharp in Japan, and the price and yield of this touch screen will affect iPad 3's supply plan. So Apple will invest \$ 1 billion on the new plant of Sharp in Kameyama, Japan, providing for the iPhone and iPad LCD screen. Currently, iPad is Apple's second-largest source of revenue, in the third quarter Apple has sold a total of 9.25 million iPad, revenues \$ 6.046 billion, with an increase of 183%.

In addition, comparing to iPad 3's farther release date, the next-generation of iPhone may be released in the next two months, and many operators of China are also competing for the right to sell, chairman Wang of China Mobile said that by the end of July,

China Mobile's network has a total of 7.44 million iPhone users, but Mr. Wang admitted that the introduction of iPhone is no timetable.

According to the U.S. media reports, a vice president of the U.S. mobile operator AT & T said to several employees that iPhone 5 will be launched in early October.

[

How

to Convert DVD to iPad]

From past experience, this message usually came out before the release of the new iPhone. AT & T employees will always be notified in advance in order to make good preparation, because the new iPhone will certainly stimulate a substantial growth of the market demand.

The insiders generally believe that Apple will release iPhone 5 in this year's product conference at the end of September.

There are many analysts believe that Apple iPad 3 's official release time should be in early 2012, rather than the widely rumored before Christmas this year.

Amazon "cybersquatting" Cloud Video Domain

The "cloud struggle" among Amazon, Google and Apple declared beginning earlier this year, and began relating to general consumers. Let's see what Amazon do.

Recently, the foreign media reports that Amazon has successfully registered a dozen cloud video service domain, including "instantcloudvideo.com", "amazoncloudvideo.com" and so on. On the day before the domain were successfully registered, the company said its video click has exceeded 10 mark. Amazon has been actively increasing its video product line, and will start even more intense competition with Netflix in the streaming field. Maybe you are finding this:

ipad dvd

converter.

Amazon strives to be the industry leader of "cloud video", it is not only active on cooperation with large production companies, such as CBS and NBC, to obtain a wealth of new sources, but also have other production companies and network studios. Users can rent or buy the latest movies, and watch the most popular TV shows in the real-time videos in Amazon through all kinds of equipments which can link the "cloud".

According to the evaluation from foreign media, Amazon's cloud service seems to be most simple, Google's cloud storage cheapest, and Apple will provide the best integrated services for user's existing equipments.

iPad tip:

avi to ipad
converter

Latest news reported that in the future Amazon will launch a customized equipment, it is a panel which is based on Android operating system. Through this panel, Amazon will put hundreds or even thousands of movies, TV shows and other videos on it for users.

19-Year-Old Genius, Jailbreak Hacker Comex Will Join Apple

Steve Jobs announced to resign from Apple yesterday, causing Apple fans very disappointed and sad. But today here are some information that seems comedy, that is, the well-known jailbreak hacker, comex, the cracker who develop the iPad2 jailbreak tool JailbreakMe3.0, recently announced on Twitter that he has received Apple's invitation, and is ready to begin trainee work in Apple.

comex's real name is Allegra, who is a 19 year-old gifted student of Brown University. Forbes have interviewed him, showing us the underside of the god of the Internet.

Nicholas Allegra and his parents live in Chappaqua, New York. At first glance, you might know this big boy who is tall, wearing a fluffy brown hair, and wearing glasses is actually a super-hacker, only 19 year-old but has been able to do anything he want in the jailbreak world. Because he has a screen name sought after by millions of people in the industry: Comex.

iPad tip:

how

to convert dvd to ipad

Allegra is studying in Brown University, he has now entered the vacation period, and are looking for a suitable practice enterprise. During this period, he attack on the security of computer field again and again : finding loopholes from the source code within Apple's iPhone. You know, this phone has more limits than almost any computer in the market. Allegra's purpose to find loopholes is to unlock the "yoke" iPhone set to anyhacker, and to benefit lots of iPhone users.

"Forbes" reporters got through Allegra's phone and asked him how he evaluate jailbreak. His answer was:" I think this just like to edit an English newspaper. As long as you carefully check, and to find out the mistakes in it." Then he said modestly, "Actually I do not know why everything (JailBreakMe) i have done acts."

Allegra stated that JailBreakMe is not used for theft or damage, it just let users can install any software they want on their own equipment. But as a jailbreak tool, it is not welcomed by Apple, because if the loopholes it exploited on Apple device once handed in those hackers who are not pregnant well-intentioned, may result in unpredictable consequences.

In the end of the interview, Forbes' columnist suggested that Apple should recruit the genius. No one would have thought Apple acts so quickly, comex did not disclose his work range designated by Apple, but apparently he will no longer develop the jailbreak tools.

Apple Chief Designer Ive's Work iPod Is Now Collected By The Museum

Apple's products' "look" charm take over the lead, 44-year-old architect Ive should be the meritorious statesman, he will be the key of Apple's continued success. Something about iPad:

convert video to

ipad

Recently the resigned chief executive Steve Jobs is Apple's most powerful figure, but Apple products get acceptance mostly because of the simple, attractive design, and thanks to the 44-year-old chief designer Jonathan Ive.

Ive's six works (one of which is the iPod) is collected by New York Modern Art Museum, the success is self-evident.

Ive used the colorful iMac to break the rigid framework of the desktop, this helped Jobs reverse Apple's Finance, and later the iPod, iPhone and iPad make Apple become the overlord in consumer electronics and the object envied by Silicon Valley.

Lay the product design

After Steve Jobs resigned, Apple must prove to the outside world, without Steve Jobs, they are still able to introduce attractive products. Apple COO Cook took over the executive responsibilities, but Apple want to continue to success, the real pressure is on the shoulders of Ive.

British Ive's major is design, he opened a design company in London after graduated, he was asked into Apple by Apple's design director Brunner in 1992, when Steve Jobs was still in his 12 years' "exile period".

iPad tip:

convert

flv to ipad

Brunner left in 1996, he suggested only 29 years old Ive be his position. Jobs returned to Apple in 1997 serving as the interim chief executive, he appointed Ive as vice president of industrial design department. Ive began to lead Apple's design team, and caused great impact on product style.

The software's design and easily use is the key why Apple products are ahead of the competition. Apple is now led by Cook, whether he can encourage Ive to continue to create hot products remains to be seen.

There is no way to know how long Ive will continue serve Apple, but it is certain that Apple has created its own style.

Apple iPad Is Replacing The Cash Register To Become The Mainstream Payment Instrument

Although the mobile payment is still in early stages of development, but mobile devices, especially Apple products, have become the mainstream choice of U.S. retailers.

Currently, the all-american retailers are deploying the mobile payment instrument. According to the data released by the U.S. retailers Low's last week, the company has deployed 42,000 handheld devices in the United States and Canada. Home Depot, Nordstrom and Urban Outfitters and other companies had also announced a similar number. Something about iPad:

copy

dvd to ipad

Although some retailers did not disclose the mobile payment devices they mainly deploy at present, but for the most part, these retailers use Apple products, including iPhone, iPad and iPod Touch. And while these devices are often used to accept payment, but many salespeople also use these devices find answers for questions, and understand the product inventory and so on.

[

download

youtube videos to ipad]

Mobile Software Corporation Global Bay said the retailers who use Apple products for mobile payment are becoming more and more.

The company said on Tuesday that it will help retailers Pacific Sunware deploy iPad in 300 stores. The company also plans to

deploy such payment equipments in 500 to 600 stores next year.

Bhanote said, Global Bay deployed iPad for the first time in November last year, it was in a mall named Things Remembered, the iPad is used as a self-service equipment. He said, iPad can make the user experience smoother.

Even though it is still in its early stages, but there is evidence that handheld devices will continue to develop, from a equipment used to help people simplify the process to a tool for promoting sales. Bhanote said the next stage of mobile payment services is to introduce business elements.

Bhanote refused to disclose how many iPads the company deployed in the past year. However, he said, the retailers have already seen the results. One retailer reported that the average order price rose 12% after using Apple devices to serve customers.

The Wireless Patent Allegation Troubles Apple, Dell and HP

According to the reports from foreign media, a company named WiLAN blamed Apple, HP, Dell, Alcatel-Lucent, Kycera and HTC in violation of its two franchises in wireless broadband communications area.

According to WiLAN's description, one of the patents involved in HSPA and CDMA network, while the other is related with Wi-Fi and LTE communication network. The company submitted a complaint to the district court which is located in East Texas. The court rises to distinction by hearing this case. This lawsuit adds fuel to the flames on the movement and wireless market whcih is inherently chaotic.

[

Interest First, Taiwan's Regulations Are Facing Apple And Google's Passive Resistance

According to Taiwan media, someone tip-off the news that the 7 Days refund policy which was coordinated well by Apple and the Taipei Government regulations in July, seems to be changed back to "original". Regulation has contacted Apple's legal representative, the opponent said the Taiwan branch had not received any notice of change, and because the local United States is still on holiday today(Labor Day), it can not get contact with Apple Corporation yet. iPad tip:

convert
avi to ipad

It is understood that the Taipei Government has sent a letter to American Apple and Google in July, asking its online software store AppStore and AndroidMarket to provide 7 days refund mechanism according to the provisions of Taiwan's Consumer Protection Law, within seven days, consumers can unconditionally refund for buying software.

Apple said on June 23 that it is willing to meet the requirement of the Taipei City Government and will extend the software trial period to seven days, but recently, users found that the provision has not been executed, the 7 days refund mechanism seems to have been changed back to "original".

And Google still has no response on the ultimatum expires June 23, only after the Taipei City Government threatened to fine NT \$ 300,000 had Google sent person to Taiwan to negotiate.

[
dvd to ipad

Tim Cook's Initiative, The Charitable Donation Subsidy Plan For Apple Staff

According to the U.S. technology blog 9to5mac's reports, Apple CEO Tim Cook said in the internal e-mail sending to Apple staff today, Apple will launch a charitable donation subsidy program for employees, each employee will have an annual maximum allowance of \$ 10,000. Cook issued the following message content:

To all staff:

I am very pleased to announce that we have started a charitable donation matching subsidy program, we are deeply inspired by the generous colleagues who feedbacks the community, this program will help the individual contributions get further promotion.

[
dvd
to ipad for mac]

From September 15 onwards, if you donate to the non-profit organization which meet the 501 (c) (3) terms, Apple will give you the appropriate amount of subsidies, up to \$ 10,000 per year.

The plans will first practice for the entire United States recruits, and gradually expand to other parts of the world.

Thank you for your hard work, whether you are staff in Apple's headquarters or other regional, I feel very proud to be one of you.

If you want to know more information about the program, you can log on Apple's Human Resources website.

New York Fake Apple Store Compromised With Apple And Surrendered All Infringing Goods

The two New York stores which were charged with the unauthorized sale of Apple products accessories, have reached to a settlement agreement and will transfer all the inventories with "Apple" word or with any Apple trademarks. iPad tip:
dvd to ipad

This agreement has been submitted to the federal court in Brooklyn on Thursday, which will end Apple Story and Fun Zone's trademark infringement lawsuit in July last year, these two shops are both located in New York Queens Chinatown selling the shell, earphone and other accessories of iPhone, iPad, iPod and other Apple products. However, these two stores insisted that they did not infringe any trademark of Apple.

If the United States District Judge Kiyo Matsumoto approve the settlement, then the two stores will have five days to transfer any infringing products in stock, as well as any products, labels, packages, promotional materials and other items with Apple trademark. According to the court documents submitted by Apple, the unauthorized iPhone and iPod case design sold by these two stores mimicked the iPhone and iPod design, and even with "designed by Apple in California, Assembled in China" words.

Useful share:

how

to put videos to ipad

As part of the settlement agreement, Apple Store has agreed to change the name. Apple think that the store's name is too similar to its "Apple Store" trademark.ã

In addition, the owner of Apple Store Janice Po Chiang, Fun Zone manager Jimmy Kwok and other defendants are also prohibited to destruct the manufacture, distribution, sale or receipt records of the shells and headphones which are identified as counterfeit by Apple.

Apple spokesman declined to comment on the settlement agreement, both lawyers didn't comment too. For more, you can click here:

Cancel The SIM Card Slot? Apple Wants To Play Skimming Off The Carriers

As October is approaching, the annual mobile phone Apple iPhone 5 will also be on sale, the rumors about whether the iPhone5 will use the dual-core processor, whether it will use the 4-inch screen, or will be equipped with NFC technology, or it will use 8-megapixel camera flied around. Objectively speaking, the above rumors can be right, while the naked eye 3D technology is so unlikely. But there is a rumor which people do not pay attention to, that is, Apple may cancel the SIM card slot in the iPhone, and directly build the related chips in the phone, the movement immediately provoked a Melaleuca wave.

dvd

to ipad mac

The small SIM card will become the core of multi-contest From Apple iPhone 4, the micro SIM card replaced the current standard SIM card, objectively speaking, the Micro SIM is more compact, progress on the process narrowed the size of the SIM card, in theory, the phone can be made thinner, of higher integration levels. For now, however, in addition to Apple, there is little mobile phone manufacturer to promote micro SIM card, but Nokia N9 adopt such standards, However, the operators lack enthusiasm, and users have no incentive, in the next two years, it is unlikely for the technology to become popular in a large

area.

It is said that Apple is working with SIM card manufacturer Gemalto to co-develop a new "SIM card" -- It is actually a chip fully built in mobile phone, the carrier's information has been built in the chip when it is shipped. You may care about this: download

youtube videos to ipad. The way users choose operators is also very simple, they can activate carrier selection directly through Apple's website or by a particular App Store application, and can even choose adequate operators and tariff packages. The operators welcomed the Apple iPhone 5, for fear that they lose this important product.

There is no substantial change in micro SIM card

This may be the most serious challenge since the inception of mobile phone for the operators, the advantages of the traditional carriers will no longer exist, Apple can even override above the operators, because of this, the program faced fierce opposition from International telecom operators. Of course, because the three major network technologies form a natural barrier, the implementation of such technology is more difficult, but the iPhone 5 is the awaited eagerly highlight of the three domestic major carriers, as if a rare bird.

The contact and alignment keep consistent

If this proposal can achieve, although the network services such as voice and 3G/4G data is still provided by telecommunications operators, but the dominant position of the market is clearly gradually dominated by Apple, especially the European carriers commonly used WCDMA network standard, unlike the United States, Japan and South Korea widely use CDMA 2000 standard and generally use the no slot number directly write program, more unseeing on non-card design.

youtube

to ipad. Operators' Dominance is threatened, Apple seems to overstep the authority, the panic of operations is considered as excusable.

Operators' package may be sold in the App Store?

Imagine the operator's information are stored in the mobile phone chips, the operators sell their network package in the Apple App Store, it sounds so pointless, but when this thing relates to Apple, the miracle may happen, after all, this company of Steve Jobs has been creating miracles, let us take a look at will Apple really have such a strength to shake the operator?

Apple Will Release New Product Next Month And The Transaction Volume Of Second-hand iPhone Increased Significantly

Recent rumors said that Apple will release the next-generation of iPhone next month. Second-hand digital equipment trading site Gazelle said, now the number of users who want to sell second-hand iPhone increased by 84% compared with two weeks ago.

dvd to ipad

Gazelle's "chief digital products responsible person" Anthony Scarsella said that: "The release of Apple's next iPhone was delayed for a long time, so i am sure it will attract a large number of users. For us, this is an unprecedented phenomenon. In the past, digital product owners will not sell the equipment currently in use until the release of new products."

Scarsella said, mobile is a device users need to use every day, only after users obtain the alternatives will they sell the current mobile phone, so the behavior of iPhone users now seem strange. You can try this

dvd converter for

ipad, it will be a good experience. He said:" User can not sell their mobile phone, then don't use the phone. By Tablet PC or other device, you can sell the camera, and buy a new camera two months later. But the mobile phone is the equipment users require all the time. "

Scarsella said, in the past two weeks, users sold second-hand iPhone including iPhone 3G, iPhone 3GS and iPhone 4, but there was no first-generation of iPhone. Gazelle reclaim first-generation of iPhone at the price of about \$ 36.

Gazelle did not disclose in the recovery of all the iPhone, what percentage of each type. But the company's spokesman said, iPhone is one of the digital products which are recovered most. The company expected they will recover about 2500 iPhone this week, but the recycling price will be set based on mobile phone purity and market demand.

[

download

youtube videos ipad]

Scarsella said: "Last year, before Apple introduced the new iPhone, we recovered about 100 iPhone per day, but after the release of the iPhone 4 this figure rose to 2000 per day.

Therefore, we does not meet the peak of the recovery currently, but this week will reach 2500. "To encourage users to sell second-hand iPhone, Gazelle provides 30 Day Maintain Price services.

iPhone 5 prototype has been lost, the police asked for the surveillance video

The U.S. science and technology news site CNET reported that Apple employee has lost a iPhone 5 prototype in Cava22 bar in San Francisco in July this year. According to the latest news, San Francisco police have asked the owner of Cava22 bar to provide surveillance video, that is, the police may do internal investigation to help Apple find the iPhone 5 prototype. iPad resource:

convert

dvd to ipad.

Cava 22 bar owner Jose Valle said in an interview with CNET on Friday, San Francisco Police officers went to the bar about a week ago, said as part of the investigation of the case of missing iPhone 5 prototype, they want to get the surveillance video of the bar from July 21th to 22th. Valle said he later found the video, trying to get in touch with the investigators, but they have not yet been to the bar to see this video.

San Francisco Police Station spokesman Troy Dangerfield said that he did not know whether the investigators have been to Cava 22 bar, or found the surveillance video. But he said that because Apple did not apply to the police for criminal investigation, so he believed the police did not begin this investigation.

Something about iPad:

dvd to ipad

converter. Dangerfield speculated that the police's seeking and obtaining the surveillance video is probably an internal survey that they launched this month to assist Apple on search of households on July 24th.

It was reported that Apple employees and police had conducted a search of the house of the nearby residents, 22-year-old Sergio Calderon, after the loss of the iPhone 5 prototype. San Francisco Police Station recognized they have offered help to Apple, but argued that searches for Calderon's room, car and computer were implemented entirely by Apple employees. Calderon said in an interview with local newspaper SFWeekly, a total of six people came to his home to search for the iPhone 5 prototype, but they claimed they are the police rather than Apple employees. Calderon said that if he knows these people are not police, he certainly will not allow them to search his own house. iPad tip: convert

mkv to ipad. Calderon said to the police and the Apple employees, he did live in Cava 22 bar at the night of the incident, but he denied the matter in connection with him. Calderon and Apple declined to make comment.

How to Transfer Kung Fu Panda to iPad on Mac?

If you haven't watch Kung Fu Panda 2 till now, you are out of date. Cinema everywhere is packed with Kung Fu Panda fans, screaming for this clumsy panda. If you are still not enjoy yourself to the full, you can also watch Kung Fu Panda 2 on you portable devices, like some Apple products (iPad, iPhone, iPod and more). To

transfer

kongfu panda to ipad on mac, you need to convert the movie to iPad compatible format.

The best choice for you to convert video file into an iPad-friendly .mp4 video file in 3 simple steps. Our absolute favorite iPad Video Converter for Mac due to its speed, the simplicity of the interface and the quality of the output file. Now you may free download

ipad video converter

for mac and follow the step-by-step guide. Now you can learn

how to transfer Kung Fu Panda to iPad on Mac.

If you are For Windows user, here is DVD Video to iPad Converter Suite is one of the best choice.

Step 1: Download iPad Video Converter for Mac and install it on your system. Click "Add" to load your Kung Fu Panda movie.

Step 2: Choose your iPad output in the "Profile" pull-down menu.

For example: if you have a wifi iPad, select the "iPad MPEG-4 Video (*.mp4)" setting. This will give you a great-looking video and take the least amount of conversion time.

Step 3: Hit "Convert" and go get a snack. The conversion time will depend on several variables including: the duration of the video file, the speed of your computer, the codec you selected and the bitrate you set.

OK, this is all for the conversion. After it, you will be able to enjoy Kung Fu Panda on iPad's wide screen. Show it to your friends and enjoy! You may free download iPad Video Converter for Mac via the icon below.

Is it easy transfer kongfu panda to ipad on mac. With this step by step, you can also download which you would like to see movie. You can happy though the free time at home. Hope this post can take the convenience for you. Have a nice time!

Analysis: iCloud plays a more important role than iPhone5 for Apple

If you give rank to the importance of the products Apple released, the order should be: iCloud, iOS 5, then iPhone 5.

After Apple iCloud made its debut on the WWDC conference, it seems to have become old news, but the service is also about to take off. As Apple released iCloud, it also shows that Apple will change from PC-centric vendor towards a more diverse future, if iCloud gives up halfway or appears other problems, it will be a stain of the glorious history of Apple.

Analysts said that on this year's WWDC conference held in June, the most interesting topic is the iCloud Center Statement issued by Steve Jobs, PC / Mac have made way for iCloud. We believe that Apple, Google, Facebook, Amazon and Microsoft will launch a major war for the dominant position of the consumption network, the core of the war is data control. Something about iPad:

import

contacts into iPad. Software, hardware and network services will lead to the asymmetry competition between the giants. Our view is that the most valuable platforms will keep the most valuable information, and the platform which saves the most valuable information will win.

The biggest problem for iOS 5 is whether the local integration of Twitter and Facebook will add more more social elements for Apple. It is worth noting that, for Apple, Twitter integration is crucial, because Apple don't need to worry about their own social services.

In fact, Twitter also help Apple resist Facebook. Facebook may publish an iPad application, but this application is more likely to support HTML5, directly attract the developers. iPad tip: convert video to iPad.

Frankly, Facebook does not need Apple to increase its appeal to the audience.

Apple's new iPhone, equipped with high-quality cameras and new features, but the thing worth more watching is not Apple's latest hardware, Apple will commitment to the development of its cloud services, software and data collection in the short term, whether success or not will determine Apple's future.

Apple declined slightly by 0.23% on the first day of its resumption, the industry is optimistic about Apple's prospects

On October 6th, the words "NASDAQ Mourn Steve Jobs" and the huge black and white portrait appeared on the big screen of New York Nasdaq exchange at Times Square, to nostalgia for the entrepreneur who has made important contributions to the global technology industry.

The news of Apple founder Steve Jobs's death at the evening of 5th shocked the world, causing investors worry about Apple's prospects. On October 5th, in order to avoid sharp fluctuations in stock price, Apple announced the temporary suspension. iPad

resource:

video to ipad

converter. But on October 6th, Apple's stock price does not appear huge fall, eventually slightly down 0.23%. Many analysts believe that Apple's corporate structure and development strategy have been basically completed, the outlook of the next few years will be still good.

In recent years, Apple's stock price was significantly impacted by Steve Jobs' health, but as the investors began understanding and gradually digesting his health condition, and he gradually fade out Apple's management, this influence is gradually fade. iPad tip:

how

to remove an app from ipad. Jobs announced his resignation from Apple CEO on August 15th this year, the shares of the same day only slightly decreased by 0.7%, and in the next few trading days it continued to rise.

Although there are pessimists believe that Steve Jobs played a vital role for Apple, without him Apple would be difficult to reproduce the brilliance, but more analysts are still optimistic about Apple's outlook.

A domestic IT industry observer, who declined to be named, told reporters that, although Steve Jobs has left, Apple now has more powerful strength than the past, the cash held in the hands of the company is now totaled \$ 76 billion, in the product side it dominates the smart phone and tablet PC market, and has layouts of the cloud computing area, it will be able to compete with the major competitors such as Amazon, so you can say that the current Apple stock prices are no longer contacted closely with the fate of Steve Jobs as before.

[

hidden

object games for ipad]

"He has built the whole structure of the company, so that his successor can lead Apple to continue growing. "Technology industry analyst of Innovation Strategies company Dim Bajare said," The biggest question is how quickly will Steve Jobs' successors innovate products and how strong is their ability of using the new products to expand the market. "

Analysts said Apple iMessage application will damage operator's high-profit SMS

Many analysts say the iMessage application in the iOS which Apple is to release would undermine the operator's high-profit SMS. As part of iOS 5, iMessage provides a free unlimited information services for WiFi or 3G network in the iPhone, iPad and iPod Touch.

SMS services' annual revenues in the United States exceed several billion, the operator allows users to send SMS within 160 characters. And each time you send and receive text messages cost 20 cents. iPad tip:

convert

dvd to ipad. When the amount of data sent by the user reaches 1MB, basically, it costs 1500 dollars. If the user selects 25 dollars per month's 2GB set, then 1MB data amount costs only 1.25 cents.

According to Stanford Research Institute Craig Moffett, currently there are two trillion messages issued per year in the United States. This Means that operators receive annual revenue of up to 200 billion dollars from SMS, while only Verizon's SMS revenue has exceeded 7 billion dollars.

AT & T currently offers two packages, 20 dollars per month's unlimited SMS package, or the package charges 20 cents when sending or receiving per SMS. Although Apple's iOS equipment accounts for 5% of the SMS traffic. But the analyst Chetan Sharma said, as iMessage only applies to iOS devices, so users may also choose SMS packages.

So how does iMessage work? First, iMessage is part of the iOS 5, the devices which support iOS 5 are iPhone 3GS, iPhone 4, iPad, iPad 2, the third and fourth generation of iPod Touch. iPad resource:

rip dvd to ipad.

iMessage will be published in this year's WWDC, there were reports said that Apple's carrier partners do not know Apple prepares to launch such a service.

iMessage application will make it more cheap for communications between iOS devices, in some circumstances, iMessage only need 3G networks to work. the service is very attractive for SMS fans, because users can use the service free of charge to chat with other relatives.

iMessage doesn't limit the length of the message to within 160 characters, and users can also send photos, videos, location and contact information through iMessage, all the information sent and received will be encrypted. Apple related:

video

to ipad converter. The codes recently found in Apple's iChat application shows that Apple is likely to bring this service into the Mac OS X.

Asmyco said that Apple has spent \$ 750 million on iCloud data center construction

On last week's iPhone 4S' presentation, Apple CEO Tim Cook announced that since the iPhone put on sale in the summer of 2007, iOS device has sold 250 million units. And Apple's latest, the best iPhone 4S marks the iPhone change from hardware to software and online services. iPad tip:

ipad video converter.

iPhone 4S' proprietary feature Siri voice assistant is considered to be the most potential feature of iPhone 4S. Siri need the mobile to have a strong computing power, and need to rely on the cloud computing to complete.

Now iOS 5 and iCloud have been officially released, Apple's cloud computing is experiencing the test of millions of users, users can now use iCloud for free to do data backup and synchronization for the device.

In the middle of 2009, Apple acknowledged to have planned to spend 1 billion dollars in building a world-class data center in North Carolina in nine years, which will be Apple's third data center, Asmyco's Horace Dediu said that Apple has spent \$ 750 million dollars on this huge data center. Apple related resource:

dvd

to ipad converter for mac. But Apple's original plan is to spend 1 billion within nine years, and now the construction of the data center has spent 3 / 4.

This does not include the servers, storage devices, operating personnel, R & D, licensing, loan and other costs. Currently very few companies are willing to spend hundreds of millions of dollars to build the data center.

The data center in North Carolina has been on the line before Apple announced iCloud at WWDC, Steve Jobs said in the keynote that in this data center there are all very expensive equipments.

Some analysts pointed out that Apple is likely to continue to build data centers around the world, in order to be able to push video contents to user terminal. Apple also hired Microsoft's former data center genius Kevin Timmons in April this year.

Extended reading:

iPhone 4S is exposed to have eight problems

After iPhone 4S started sale on Oct. 14th, it has sold 4 million units. So far, there was no major bug found in iPhone 4S, but besides a lot of positive evaluations, there are still users reflecting some problems of the iPhone 4S. The following is most eight problems users have reflected about iPhone 4S.

Sprint contract machine's slow web access

According to the report, Sprint community is bristled with complaints about the too slow 3G connection speed of iPhone 4S.

After PC MAG test, Sprint's connection speed is less than the other two operators AT&T and Verizon, also lower than the standard 3G speed.

AT&T contract machine has activation problems

In this two days, AT&T users generally reflected the difficult activation of his own iPhone 4S. Apple resource: dvd to ipad ripper. It is not clear whether due to AT&T's large network load, or Apple's system problem.

Poor battery life

iPhone 4S has now been confirmed that the battery is less durable than the iPhone 4. Cook's commitment before saying 4S will have longer battery life appears to be lie words, in fact the battery life of iPhone 4S has a certain gap compared with the iPhone 4. It is not clear it is due to the hardware upgrade, or the integration of new applications (such as siri) reduces battery life.

Siri does not recognize the heavy accent

Currently Siri is only Beta version, it can only recognize English, later version will be added other languages support ??such as French and German. Even if the English recognition only, there are still many problems, such as Siri can't recognize Welsh and Scottish accent.

Yellow screen

There are already many consumers reflected in the Apple sale forum about the yellow screen issue. Compared to the normal iPhone 4S screen their phone was obviously darker, and not so sharp. So far, there are not many this yellow screens. Before this, after the sale of the iPhone 3GS it also had this problem.

Siri can not provide multinational support

If you want Siri to provide the multinational information like travelling, then you would disappoint. So far, Siri can only provide United States information. Apple tip:

mac

video converter for ipad. According to Apple's website news, Siri will join the global information support in 2012.

Camera shutter problem

Although the largest hardware upgrade on iPhone 4S is the photographic features, but there are still grumblings on Apple's support forum for the 4S photography features, they reflected when pressing the camera key, iPhone 4S shutter sometimes did not respond.

Siri strike

As a Beta version, Siri sometimes does not work completely. Many users reflected Siri can not access network, whether 3G or Wifi. Maybe you should say to the phone: Siri, please find a network to connect.

Without jailbreak, enable the multitasking gesture and image display function in the first generation of iPad

Apple disabled iOS 5's multitasking gesture function in the first generation of iPad without giving an official explanation. If you are an iPad first generation user and has accustomed to using gestures, then you have to think of ways to enable these functions on the iOS 5. Jailbreak is of course easy to do, but there is only non-perfect jailbreak, and many users do not want to use jailbreak channels, the following method which don't need to jailbreak appears very practical. iPad resource: [dvd to ipad](#).

A user from ModMyi decided to modify the contents of redsn0w, he used a small program which can open the gesture operation for the first generation of iPad to replace the original jailbreak program. This modified version can enable the first generation of iPad's image display function at the same time. This method requires a certain hands-on ability, if you lack of confidence, please ask for help to seniors.

Step One: Download the iOS 5 firmware files for the first generation of iPad and download the following modified version of redsn0w.

Windows version

Mac OS X version

Step two: Run redsn0w, choose Jailbreak, make iPad into DFU mode.

Step three: Deselect Install Cydia, which is not to jailbreak, and then select the Enable multitasking gestures. Then follow redsn0w's prompt steps.

After completion, there will be multitasking gesture and image display options in iPad settings.

iPhone's HD Voice Function iMessage Will Be A Serious Threat To Mobile Operators

Not every iPhone feature is subversive, as many of the functions are improvements of past functions. However, iPhone really launched a subversive function, that is iMessage, which many people do not know yet, you can use the iPad, iPhone or iPod to send unconstrained text information to these equipments via WLAN or 3G network, you can also make a very clear dialogue between two iOS phones.

With iMessage, the users who used iPhone to send and receive messages in the past can choose the data or SMS service packages of a low gear. Halloween related:

angry

birds for halloween. AT & T probably felt the pressure from iMessage, so it gave up its inner SMS premium services, only remaining some conventional messaging services (such as SMS charges by each piece or other restrictive choices), daring not make direct confrontation.

Short Message Service is one of the operators' three main business, the other two are data services and voice services, of course, the data service is a must for many smart phones, then how about the voice service? It is not difficult to find that now many phone's voice functions are very bad. But now, many mobile operators have not noticed this, because their attention is focused on the data network construction and coverage.

Therefore, it is time to improve the voice function, the protagonist will be Apple of course, because Apple has inextricably links with the operators, and many operators consider Apple as a partner can not miss. Hot click:

iphone 4s

siri. Not only in the United States, but also in the rest of the world.

This high-definition voice funtion Apple introduced will give a heavy blow to the operators. Imagine you are calling up using

this application on the phone, if your phone detects another phone using iOS system, then it will make seamless high-definition voice calls automatically.

iMessage is to use Apple's message pushing system to achieve this function, making the calling sound very clear, this is what other smart phones can't do, particularly the phones using AT & T communication services, iMessage's appearance will seriously threaten the operator's voice service plan.

Of course, the operators must change plans, and take measures, AT & T had made ??a change on SMS function plan. Useful tip: dvd to

ipad ripper. However, these plans seem not to be a threat to Apple's HD Voice function.

Why Siri's Transplantation Hasn't Been Released Yet

At last weekend, iPhone hackers chpwn and Steve Troughton showed us Siri's perfect transplantation on the iPhone 4 and the iPod touch, which made many non iPhone 4S users excite for a short while, many people expected the two manito to release the technology as soon as possible, or a software program, so that they can get into the family who can take liberties with Siri.

However, according to the news recently released by science and technology blog CultofMac, on the way to release the Siri transplantation, we still have many barriers to pull through.

iPad tip:

dvd to ipad converter. Some

people should also recall that when the iPhone Dev-Team's MuscleNerd has declared: Transplanting Siri related to the piracy problem, so they would not consider this technology's development.

CultofMac said that although Apple offers iPhone 4S's firmware download on its official website, but this is just a service for the iPhone 4S users. In other words, if you do not have an iPhone

4S, extracting this phone's any file about the Siri would violate Apple's interests.

Some people may say this time, if I already have an iPhone 4S, does it mean that i can legally migrate it to iPad 2? Yes, this is of course legal. But we need to note that, due to the Siri is a program deeply integrated in the iPhone 4S, so the premise of extracting the files is that iPhone 4S needs to jailbreak. iPad source:

convert

mkv to ipad.

We all know the fact: iPhone 4S uses the same A5 chip as iPad 2's, which makes the jailbreak increase not only a grade of difficulty. Do you still remember how long you have waited for the iPad 2's jailbreak? But for Comex's anger, iPad 2 users do not know when to see the Cydia icon appear on their own device.

Even the ultimate successful jailbreak of iPad 2, the firmware used is limited to iOS 4.3.3. While the iPhone 4S is equipped with the iOS 5 firmware. What's hot:

how

to convert dvd to ipad. Therefore, though chpwn and Steve Troughton did not say whether or not they will release, or when to release the Siri transplantation, but they should know that, if they release it this time, they cannot say for sure that one day Apple will invite them to drink coffee.

You who wait for the Siri transplant, what do you think?

The Structure of The Future iPhone's Virtual SIM Card

Last October, there were rumors mentioned that Apple was experimenting with a virtual SIM card, this virtual card allows iPhone users to bypass the operators when purchasing, when returning home users can select the App Store, and then choose the operators they want to join. The idea is good, but the European operators may not promise, they even threaten that Apple if it uses the virtual SIM card, they will no longer operate iPhone. iPad tip:

convert

mov to ipad. Apple had to abandon the project.

Today, the U.S. Patent and Trademark Office published Apple's this patent (the first application time was in the fourth quarter of 2010), let us understand in the future how the iPhone will use built-in NFC (near field wireless communication technology).

Virtual SIM card would be detrimental to the interests of operators, and even knock them out completely. However, Apple mentioned in the patent description, the virtual SIM card can bring greater benefits to users, in addition to optional operators, in terms of hardware, due to the cancellation of the SIM card slot, the next iPhone will be thinner and more beautiful.

On the patent, the readers without certain knowledge might not understand. In short, Apple consider to use a common registration Identity Module (USIM) card, and this virtual card has built-in NFC router and anti-interference control. Hot click:

Analysts Said Apple is Unlikely to Lunch TV products

Sanford Bernstein analyst Toni said in a report on Friday, Apple TV was not likely to launch the TV product.

In the past month, some signs showed that Apple may launch the TV product. For example, in Walter Isaacson's "Steve Jobs Biography", Steve Jobs has mentioned that he had resolved the problem of how to master cloud computing TV. Useful tip:

dvd

to avi mac free. In addition, industry believes that Apple's voice assistant service Siri can be used in TVs to replace the remote control.

However, Sacconaghi's opposite view. He said in his report: "TV

viewing experience has been very mature, and Apple has some technical elements to promote innovation. We believe that Apple can achieve this innovation by launching set-top boxes, such as the Apple TV 3.0, rather than launch a complete TV product."

He also said, Sanford Bernstein expects that the revenue of global tablet TV market in 2012 will be 112 billion Dollars, but the market will decline, and the profit is low. Hot click:

dvd

to mkv. In addition, Apple's innovation which can be carried out can be achieved by connecting to users' existing TV set-top box.

Sacsonaghi thought that even if Apple can get some of the content's copyright, its share in the global tablet TV market will be 3% at most, that is, selling 800 million units. Apple could gain the same amount of profit by selling three times of Apple TV set-top box at 1 / 6 of the price.

There Are Still Many Obstacles For iPad To Enter The Health Care Field

According to the reports, the Seattle Children Hospital has conducted a pilot project: it let some clinicians to use iPad at work, they used the iPad to access the hospital's network and ran a number of important applications on a virtual desktop environment. Apple related:

mkv

to avi mac. But the results were not satisfactory.

The hospital's CTO Wes Wright said that "all clinicians who used the iPad had returned the iPad back, they said the iPad can not complete the routine clinical work. the EMR (electronic medical record) application was not convenient to use on iPad."

Although some hospitals have begun to use the iPad, but there are still many obstacles for iPad to enter the health care field.

At first are those applications which clinicians can use to complete the work. Wright said: "Apple's iCloud storage service is a worrying factor."

Apple said that in the United States 80% of the large hospitals are currently trying to use iPad or have already used.

Hot click:

Trade Rumors: Apple Prepares to Break up with Intel, And Intends to Acquire AMD

An industry observer who wishes to remain anonymous said today, Apple prepares to break up with Intel, and wants to acquire AMD. He said that Apple and Intel are now angry, unhappy with each other, the blasting fuse is Intel's Ultrabook. Apple related:

convert

avi to ipad. In 2005, the two reached an exclusive agreement, Apple is to migrate to x86 seamlessly, and will use Intel processors for five consecutive years.

This agreement let Apple become an x86 company, which makes it obtain decent interoperability with Wintel, and don't need to wait for ARM camp to launch the processor appropriate for Apple, also meets the performance Apple's high-end products requires.

Allegedly, Apple and Intel's 5 year agreement comes to an end, the rumors said that Apple will use AMD processors to match the Macbook Air. Steve Jobs has been an Intel fan all the time, but he also talked about it among the biographies that Intel chips are very good, but Intel innovation pace can not keep up with Apple's needs.

To Intel's slow innovation pace, Apple has never offered very good help. Apple worried that if it starts to give Intel innovative ideas, Intel is likely to take them to share with those partners. Apple tip:

convert

mkv to ipad. The Ultrabook which is strikingly similar to the MacBook is a proof.

Apple now hopes its own ecosystems continue to win. This means that Apple breaks up with Intel, because Intel are closely linked with Microsoft. Wintel alliance is in full swing again, which means that if Apple does not break up with Intel, Intel will be good in both worlds. If Apple cooperates with AMD, and even acquires AMD, will not only abandon the Wintel, not to mention to obtain the abundant intellectual property and patent portfolio from AMD, and inherit, add freely or modify its own x86 designs to get different functions.

Importantly, if Apple is interested in acquiring AMD, the regulators may not be too excited. Helpful resource:

convert

video to ipad on mac. Apple and AMD do not have enough market monopoly, the regulators will not care, on the contrary, the regulators will consider this acquisition will enhance the competition to Intel.

AMD's new president has laid off 10 percent of its staffs, including many executives, does this mean that AMD is making eyes at Apple?

Jobs Wanted to Use Non-authorized WiFi Band to Establish Apple's Own Mobile Phone Network

According to IDG website's report, venture capitalist John Stanton said that in the first few years when the iPhone came out, Steve Jobs has been exploring in using non-licensed WiFi band to establish Apple's mobile networks, so that the iPhone customers can skip operators to use Apple's device directly. Although this approach was proved unworkable ultimately, but Stanton said Steve Jobs's vision is that he wanted to control the user's experience completely. Something about iPad:
dvd to ipad converter.

According to Stanton, Steve Jobs gave up the idea in 2007, and the company decided to sign an agreement with the existing

traditional operators, but Apple still controls the equipment on the carrier network strictly.

Stanton was an early entrepreneur on mobile phone technology, he has established a company called Western Wireless Corporation, later part of the company separated from it creating a new company called VoiceStream, VoiceStream was acquired by Deutsche Telekom in 2001, becoming the fourth largest U.S. carrier T-Mobile. Something you may concern about:

convert

avi to ipad. The remaining part of Western Wireless was purchased by Alltel in 2005, it seems that Jobs and Stanton's dialogue occurred at this time.

Apple changes the world once again: HairPort Extreme

Apple has released the HairPort Extreme, a high-tech personal care products, which allows user's hair to become the terminal of private Wi-Fi hotspots. Apple's official spokesman said:
"HairPort Extreme will change the way you connect with the world, the more hair your have, the more powerful the signal will be, which means you can connect with the world more firmly."

This product can be put into aluminum spray bottles to use. HairPort Extreme's use is similar to the hair spray of traditional sense - but this is their only common ground. Apple related:
dvd to ipad. Each of the mist particles in the HairPort Extreme contains Apple's latest HairNet technology, they can automatically bond together with each unit of the surrounding particles and form a temporary Wi-Fi network with a using time of 24 hours.
In addition to HairPort Extreme, Apple also released a series of accessories which can increase the efficacy of this product and can be chosen by consumers. Such as PowerTip, which can provide precise control for those consumers who need to spray in the eyelashes, beard, or the lamb chops.
Apple's chief designer Jony Ive also designed wigs compatible with HairPort , and provide a variety of styles, such as a round bottle type, cellular, and comb head. This was not enough, Apple told the media that they will release HariPort Express. Apple tip:

convert

avi to ipad. These 3-ounce heavy container can save large volumes of HairPort, which can be used in the whole body of a child or pet, so you can let him / them become HairNet hot spots when you take the flight.

Analysts expect that until 2012, Apple will bring HairPort compatibility to another level, at that time, people's hand hair and leg hair are going to support this product which can change everything once again.

Sharp Will Provide IGZO Technology Screen for iOS Devices

Analyst of U.S. investment bank Jefferies Peter Misek said in a recent investor report that Apple will cooperate with Sharp to create an improved IGZO technology screen, which may be used in the next generation of iPad. If so, then the iPad 3 screen will abandon the current used IPS technology, and don't need to consider the dual LED backlight design. IGZO is short for InGaZnO (indium gallium zinc oxide), which is a thin-film transistor technology, it was first published by Professor Hideo Hosono of Japan in 1995. The screen using IGZO technology can provide 330 dpi ultra-clear picture. Something about iPad:

dvd ipad

converter. On the part of Japan, Samsung and Sharp have the fastest pace in using the technology.

Misek said that Apple has purchased the manufacturing equipment with the value of 5-10 billion, these devices have been shipped to Sharp's Gen 6 factory in Japan Kameyama, the factory will manufacture iOS device's screen.

There are many advantages for iOS device screen to use IGZO technology, such as it will make the device thinner, the battery life will be longer, and the entire user experience will also be improved significantly. iPad resource:

dvd converter to ipad.

Moreover, IGZO technology provides the power consumption

near-OLED screen, it will cost little.

Kindle Fire Defeated iPad Becoming the Best-selling Tablet in Best Buy

Everyone had thought that iPad is invincible, but Kindle Fire has rewritten the history. After the Thanksgiving shopping season, the \$ 199 Kindle Fire beat the 16GB black iPad 2, becoming the best-selling tablet in Best Buy. Something about iPad:

ipad video converter.

First involved in the tablet market and has gotten such success, Amazon is certainly rather happy. And it is predicted that Kindle series sales this year will be four times more than last year, and the Kindle Fire which did a great selling in this Thanksgiving must have made big contributions. Android Tablet + Amazon rich e-book content model was an unprecedented success.

In fact, in the early days of Kindle Fire's list, many commentators have made criticisms to the Kindle Fire, they thought that the tablet's software and system still had many bugs, and a \$ 199 cheap tablet was not enough to compete with iPad 2. iPad tip:

ipad
to computer transfer. It now appears that these comments were said too early, \$ 199 plus Amazon's rich content have great appeal to U.S. local consumers, it was reported that the Kindle Fire was very hot in Black Friday shopping season. But having said that, if the original iPad 2 had only black color, can Kindle Fire now become the best-selling tablet?

Nine iOS Games Get at Least \$ 20 Million in Annual Revenue

Owen Goss of Streaming Color company did a survey on iOS game developers, 4% of the iOS developers have an income of 1 million to \$ 10 million dollars. In the AppStore, there are nine games which earned at least \$ 20 million dollars, how much have you earned from the iOS? If you want to develop something for the platform, this is a question worth pondering. You may concern about this:

video converter for
mac.

Let's have a look at Appstore's Top-Grossing chart (take the United Kingdom and the United States for example)

In June this year, Epic confirmed that the "Infinity Blade" earned 10 million dollars on iOS platform, and in October, the Chair Entertainment(a subsidiary of Epic) which developed "Infinity Blade" confirmed that the game downloads has reached 5 million, which brought a net income of 20 million dollars.

In the Grossing list in the United States, the "Infinity Blade" ranked 9, in the UK, it ranked 14. We may take the game's income in the United States as a reference, in 2011, at least 9 games' income will exceed 20 million dollars.

iOS game really is heaven?

Completely yes! In the United States, among the Top Grossing applications, games accounted for 80, and there are at least nine kinds of games earning more than \$ 20 million. Useful tip:

avi

to mp4 mac. Moreover, in the Appstore's Top 10, the top six are games; in the Top 150, games accounted for 100, games have been downloaded 7157 times.

The Fate of iPad 2 is Difficult to Predict

DigiTimes reported that according to the news from supply chain, Apple has begun to gradually reduce the iPad 2 production, suggesting the upcoming iPad. But it is not yet clear whether Apple will continue to retain iPad 2, and sell it at low price, just the same as iPhone 3GS. Resource for iPad users:

dvd to ipad
converter.

Sources said Apple reduced iPad 2 orders at the same time maintaining the stability of the new generation of iPad's production. According to the reports, the next generation of iPad will be released in March 2012. Although there are news about iPad 2's reducing production, but sources said it is still "premature" to assert whether Apple iPad 2 will stop production.

Before this, a large number of reports said that even though the new generation of iPad is released, Apple will continue to produce iPad 2, and sell it at preferential prices. The same strategy has been used in the iPhone 3GS. The iPhone 3GS released in 2009 continue to produce after iPhone 4 released in 2010, even after the release of iPhone 4S in October of this year, iPhone 3GS is still available to customers as a more favorable choice.

DigiTimes also believes that Apple will not stop to produce iPad 2, and it hopes to compete with the \$ 199 Amazon Kindle Fire through low price sale. iPad tip:

rip

dvd to ipad. In 2012, Apple's products releasing plan will become increasingly clear in the new year, as 2011 is about to over, soon we will be able to determine the fate of iPad 2.

Apple iMac Becomes the World's Best-selling All-in-one Machine

According to the reports from "Bloomberg", data from research firm DisplaySearch shows that all-in-one PC sales rose by 39 percent in 2010, reaching 1.45 million units. Apple iMac accounted for 32.9% of the global market share, which makes Apple become the world's largest all-in-one PC vendor. Mac related: convert
dvd to avi mac.

iMac is Apple's all-in-one product, and is Apple's best-selling desktop computer, whose sales is far more than Mac mini and Mac Pro. Apple announced on the last quarterly financial reports, Portable Mac holds 74% of Mac's total sales, but the desktop Mac computers are still very important for Apple. Lenovo sales ranked second in all-in-one machines, and Hewlett-Packard ranked third. HP plans to release a new all-in-one PC product before CES next week: HP Omni. This all-in-one machine is equipped with 27-inch display, and will be officially on sale on January 8th, starting at \$ 1,200. DisplaySearch predicted that the all-in-one computer market will continue to rise, the sales may reach 2.33 million units in 2014. What's hot:
dvd
to mkv. Although the iMac sales momentum is very strong, but Apple are questioning about the traditional tower desktop Mac Pro's future.

Daring Fireball Said Apple Will not Release iPad 4 in October

Earlier today, Taiwan media DigiTimes published an article saying that Apple will release the iPad 3 with a high-resolution Retina display in March this year, and will release iPad 4 in this October. Later well-known Apple news commentary blog Daring

Fireball author John Gruber commented that the news iPad 4 will release on October is purely nonsense. iPad resource:
dvd to ipad
converter.

Gruber said he thought that it is very normal that Apple will release the iPad 3 which supports Retina display in March, and he also said that Apple will continue to sell iPad 2, because the price of the iPad 3 with Retina display may be very expensive.

For the next generation of iPhone, Gruber said he believes that the new designed iPhone 5 will be released at the end of this year, but the device will not use a larger display. What's hot:

Apple Will Launch the iPad and iPhone with Quad-core Processor

According to the reports, technology blog 9to5Mac reported on Friday that the latest β version of iOS software show that Apple will launch the iPad and iPhone with quad-core processor.

9to5Mac said there is evidence showing that Apple will equip the future model of the iPhone and iPad with quad-core processors. The A5 iPad 2 and iPhone 4S using are dual-core processors. It also said, "Although no definite evidence show that the iPad 3 will configure the quad-core processor, but we obtained evidence that Apple is currently in the development of quad-core iOS devices. Tip for iPad users:

play
mkv files on ipad. The 'processing core management "software in the latest β version of iOS 5.1 mentioned the quad-core processors."

Industry sources who Learn more about Apple chip strategy believe that Apple's A6 chip will be a quad-core processor, Samsung will make A6 chip in the factories in Korea or Austin, Texas. Samsung has increased wafer production to supply A6 chips for Apple.

Even if this is true, Apple is not the first manufacturer to launch quad-core Tablet PCs. ASUS's Transformer Prime used Nvidia's quad-core processor Tegra 3.

Insiders pointed out that Apple will certainly optimize its quad-core processors A6 to increase speed while maintaining low power consumption. You may concern about:

how

to put videos on ipad. It is expected that iPad 3 will configure the retina display with QXGA resolution (2048 pixels X 1536 pixels), needing the processors with more powerful dealing ability.

Apple's Mac and iPad Sales on Business This Year Will Grow by 58%

Market research firm Forrester Research analyst Andrew Bartels said on Tuesday, in 2012 Apple's Mac computer and iPad Tablet sales on business is expected to reach 19 billion dollars, rising by 58% compared to 2011. In 2013, Apple's computer and Tablet sales on business will reach \$ 28 billion. Useful tip:

dvd

to 3gp converter.

Although Apple's enterprise market share is still relatively small compared to Microsoft, Windows computers, Tablet PC manufacturers and other competitors, Apple's growth is impressive. Windows Hardware sales on company this year is expected to reach \$ 69 billion.

Bartels said in the report, the largest disruptive force in computer equipment market is not the cloud, but Apple. Apple's growth in enterprise market in 2011 is a big miracle, the growth

in 2012 will be a more important factor. Mac related:

dvd

to mac.

Bartels expected in 2011 Apple's sales on business reached \$ 12 billion, in which iPad tablet and Mac computer both take a half.

He said that Apple's recent rapid growth on business sales mainly because corporate senior employees "secretly" buy Mac computers (sometimes the companies will give them compensation), IT sector procurement the iPad, and small businesses purchase computers and tablet PCs for personal and business applications.

Bartels stressed that this figure is only forecast. Apple didn't point out sales on company in the financial reports.

Something about Mac:

dvd ripper mac. He

is confident that Apple will maintain this growth rate, at least in the medium term.

The Next iPhone and iPad's Graphics Performance are Expected to Improve 20 Times

According to the U.S. technology blog AppleInsider's reports, the PowerVRSeries6GPU core performance which is expected to be used in the next generation of iPad and iPhone, will be improved 20 times than the existing products. Something about iPad:

ipad

to computer transfer.

The GPU core is produced by Imagination, the company said at the International Consumer Electronics Show (CES) on Tuesday:

"This makes Imagination's partners can provide excellent user experience, including new natural user interface and games of super reality sense and spawned a number of applications which is unattainable previously, including advanced content creation, graphics processing, augmented reality and context-aware solutions."

AppleInsider noted that Apple is one of Imagination's partners, the the A4 and A5 chips used in the last two generations of iPad and iPhone used the company's GPU. Apple also holds a substantial stake in Imagination, so PowerVRSeries6 is likely to be used in the next-generation of iPhone and iPad, but the specific time can not determined.

AppleInsider thought that, iPad 3's A6 processor may use the built-in PowerVRSeries6GPU. Tip for iPad users:

convert

Fake Apple CEO Spreads False iPad 3 Information on Twitter

Recently, a Twitter user called @ceoTimothyCook appeared on twitter. He released Twitter using Apple CEO Tim Cook's tone. He claimed that Apple will release the next generation of iPad 3, and certainly said that iPad 3 will use high-definition retina screen, have a new shape, and super-long standby time. iPad related: dvd converter to ipad.

Although iPad 3 message revealed by the Twitter is exciting, but the twitter was not recognized by the official, the former Twitter were basically a number of false news or no news content.

Tip for iPad users:

convert

dvd to ipad. We can confirm that this is a fake Apple CEO, he announced information only to attract attention.

Before this, this kind of events have happened many times on Twitter. The strange situation also appeared that the account News Corp. Chairman Murdoch certified on Twitter himself was attacked by fans to be false, while the fake Murdoch's Twitter was being sought. So twitter should add real-name system certification and add a strong and fast delete function.

3 Convenient and Practical Online PDF Converters

Pdf is a document format we regularly contact with, pdf document format conversion is a function we often need,

especially the function to

convert

pdf to word. However, using the desktop software is very troublesome, try to use the online pdf converter is obviously more convenient, here we recommend 3 online pdf converters.

1¼Joliprint

A great and easy-to-use online software, you can convert any web page into PDF documents with a nice layout, to prepare for printing purposes or convert to the formats available for e-book reader. The generated PDF articles will have a layout in the form of two-column and multi-page, they are readable, and all the original images can be preserved.

2¼Pdftoword

It is known as the most accurate pdf to word conversion tool, completely free of charge. Pdftoword's conversion speed is fast, the file's limit size is 8MB, it uses email to send the converted files to the users.

3. Convertpdftoword

A free online PDF to Word tool, you don't need to download software. Users upload PDF files online, the conversion starts when you press "Convert and Download" button, you can download directly, it is very convenient. Pdf tip for mac users:

Australian Primary School's Grade 1 and 2 Students Will Get Free iPad

Australian primary school's grade 1 and 2 students will get iPad to enhance their reading and mathematics learning. Western

Australian Governor Barnett (Colin Barnett) and Education Minister Constable (Liz Constable) today went to West Beechboro Primary School at the north-west of Perth to see how pupils learn to use this high-tech touch product iPad, and formally announced the Western Australia's early education iPad incentive plan. iPad related:

quicktime

for ipad. The program which cost millions of dollars includes providing nearly 900 units of iPad for 17 primary schools in Western Australia.

Constable said, iPad application program can make students feel that math and reading becomes alive. The state's Settlers primary school's iPad trial showed that, the boys' reading and numeracy skills have been improved by using the iPad. She believes that high-tech can attract the little boy's interest in learning, and the Tablet PC's touch feel and interaction let the students can learn and practice the multiplication tables, recognize graphics, count the money and other math skills; in reading, iPad has applications to let the students become more active in learning pronunciation, spelling and reading. An Easy Introduction of PDF Format

PDF (Portable Document Format) is a electronic file format developed by Adobe. This file format is unrelated with operating system platform, that is, PDF files are common in Windows, Unix and Mac OS operating system. This feature makes it become the ideal document format for the electronic document distribution and digital information dissemination on the Internet. More and more e-books, product descriptions, company announcements, network information and e-mail start to use PDF files. PDF related:

pdf converter for
mac. The PDF format has become a industry standard on digital
information.

PDF has many advantages compared to other electronic document
formats. It can encapsulate the text, font, format, color and the
graphics and images which are independent from devices and
resolution in one file. It can also contain hypertext links,
sound, video and other electronic information, support the
particularly long files, and its integration, security and
reliability are very high.

For ordinary readers, PDF e-book has the texture and
readability of the hard copy book, and can "realistically" show
the original appearance of the original book. The display size
can be adjusted to provide readers with a personalized reading.
PDF files don't rely on the language, font of the operating
system and display devices, it is very easy to read. Hot pdf
tool:

pdf editor for
mac. These advantages enable readers to adapt to electronic
reading and online reading quickly, which is undoubtedly
conducive to the popularity of computer and network in their
daily lives.

Western Sci-fi Film "Cowboys & Aliens" Released Blu-ray

"Cowboys & Aliens" starred by Daniel Craig and Harrison
Ford was revised from the comic book, it is an action movie
mashup with western theme and sci-fi. The film released a Blu-ray
last month. Blu-ray resource:
best
blu ray ripper.

The film tells that the amnesia man played by Daniel Craig

came to a desert town, the town's people were apparently heavily wary of this man who was tied chains on his single hand. The town was dominated by iron-fisted mayor played by Harrison Ford, the whole town was enveloped in his shadow.

But the people of the town did not foresee that the more horrible things happened, some sort of things from heaven hijacked people one after another with the speed of lightning and strange weapons. At this time the strange man gradually recovered his memories, and thought of methods to deal with aliens, with the misty beauty traveler's help, they united the people of the town together to tackle the aliens.

Universal has launched the DVD and Blu-ray version of the film recently, the configuration of the Blu-ray version is good, after all, because the movie is a western work and filled with the image of rolling sand, the picture will inevitably have grainy feeling. Blu-ray related:

how to

rip blu-ray.

The Blu-ray edition also contains director Jon Favreau's comments track, which talks about their creating process, and "creator talks".

Media Got New OS X First Indicates the Confidentiality Policy Has been Changed

Today, Apple released OS X Mountain Lion. In the history of Mac OS X, it is the first time for Apple to show an operating system to reporters first, the time the developers get the new system will be a week later than the media. Normally, Apple will release the new system to developers first, and the developers will keep the new system secret.

For many years, compared to Microsoft's Windows operating system, Apple's Mac OS X has been a niche system, which makes Apple had to implement strict confidentiality measures on the systems which have not been released, so that the competitors will not develop the same functionality in the short term. Mac related:

dvd
to avi mac. During the last five years, Apple released an iOS system every year, and Mac has been ahead of the traditional PC for several quarters in PC sales, so currently Apple has changed the product release policy.

The Mac OS X Lion released last year was first announced in October 2010, but the media did not get this system first. For Mountain Lion, Apple has changed the way of marketing the operating system, and provided the operating system to the media first.

Apple's new public relations policy matches with Mac OS X's release plan, Apple has announced to make a major update to the operating system each year from now on. What's hot:
copy
dvd to dvd. The official version of Mountain Lion will be on sale in the summer, and it may be introduced on the WWDC 2012.

Different from Microsoft: Apple Will Release OS X 10.8 at the End of the Month

On the MWC 2012 at the end of this month, Microsoft will bring the brand-new Windows 8 operating system. As Microsoft's forever competitor, Apple will also release the OS X 10.8 system with the internal code name "Mountain Lion" at the same time, a new desktop operating system war will start again. Mac tip: dvd to mkv.

We all know that Microsoft is committed to the mobile platform operating system's desktop trend, that is, mobile products will be unified with ordinary PC system. While Apple's OS X 10.8 developer preview version shows Apple is busy with OS X's iOS trend (desktop's mobile trend). According to the reports, iOS platform's popular features and applications such as iMessage, notification system, Game Center will be deeply integrated to the OS X operating system. Unlike Microsoft, Apple did not open the desktop operating system's touch road. but simply expand the services of the i series mobile devices to the desktop operating system.

Thus we can clearly find the differences between Microsoft and Apple on the excavation of the mobile operating platform. Apple is more likely to transplant a series of "killer" in iOS platform to the well-known platform. Mac related:

free mac dvd burner. In fact, the reason for this trend lies in that, the effort Apple applied on iOS platform in the past five years is much more than that on the OS X desktop operating platform in the past 10 years, and thus the process from the transformation of the iOS to the evolution of OS X has become a logical thing.

Developers are Satisfied with Mountain Lion after One-week Test

Last week, Apple released OS X 10.8 version's new system Mountain Lion for developers, At this point, developers have already installed the system for a week, how do they think about the performance of the Mountain Lion? Compared to the old system, has Mountain Lion been greatly improved? Mac related:

copy dvd on mac. Let's

see how the developers assess Apple's new system after running the Mountain Lion for one week:

Even for the MacBook three years ago, it also has a surprising effect when running Mountain Lion. First of all, during one-week use, I rarely encountered the system crash; Secondly, so far i have not encountered any major problems.

Of course, Mountain Lion has compatibility issues with some software, such as Google's Chrome browser, but on the native software of the Mountain Lion, the running speed still satisfied

me. Mac tip:

rip

dvd to mac. I believe in the future the software

compatibility issues will be gradually resolved. The new features Apple added in Mountain Lion and native software also have the desired effect.

In general, there is no slack phenomenon when Mountain Lion running in my machine and i can feel it is significantly improved compared to the Lion. Although I encountered some problems several times when using me Machine and screen sharing, but it did not have much impact. Mountain Lion is only a test version, I believe Apple will gradually fix these small problems in the next update.

"In Time", Time's Legend

The concept of time is a parameter free from influence of outside in the current definition, and is a process of material change. Hollywood science fiction movies have lots of time-related works. This "In Time" is a film assuming that one person will not continue to grow old from 25 years old (but he will die if having no money to pay for "time", and he can have "eternal life" when have money).

20th Century Fox has released the film's DVD and Blu-ray, the blu-ray version highlights the acoustics of the action scenes, especially the slow-motion action scenes, and the dialogue scenes are relatively clean and clear. Blu-ray related:

blu

ray to dvd.

The film was adapted from science fiction. It shows that poor Will accidentally accessed over 100 years of "time", the time police believed he was the perpetrator of a murder, so he embarked on a path of fleeing, and kidnapped a wealthy girl in this process. It should be said that the time background is creative (and at the same time meet some of the audience's

yearning for "eternal life"), the fleeing, kidnapping and tracing the truth have strengthened the film's action and suspense elements.

The Blu-ray edition also contains a special collection about an Interview on "Time is money", which has direct relations with the film. Blu-ray tip:

How to Creat PDF Files in Word

The latest version of Word software can create PDF files, for example, after installing the Microsoft "Save as PDF" add-ins, you can use Word 2007 to save Word documents as PDF files. Or use Word 2010 to directly create PDF files. PDF tip:
convert pdf
mac.

Step 1, open Word 2010 document window, click "File" →

"Save As" button.

Step 2, in the "Save As" dialog box, select the "Save as type" as PDF, then select the PDF file's save location and enter the name of the PDF file, and click the "Save" button.

Step 3, after the publish of the PDF file, if the current system has installed PDF viewer (such as Adobe Reader), the saved PDF file will be opened.

Tip: Users can also select the "Save as type" as PDF file, click "Options" button, do more detailed settings for the saved PDF files in the "Options" dialog box. Expand reading:

Why Developers Prefer iOS Rather than Android

Why developers prefer iOS instead of Android? There are too many reasons which make iOS more attractive, better development tools, users are richer and more willing to pay for the applications. According to the statistics, current total downloads in the App Store has exceeded 25 billion times. Mac tip:

copy dvd to mac. Of

course, there is even more important reason, consider the following analysis: an important reason, that is, in the Apple ecosystem, the speed iOS users accept the operating system version is faster.

First look at the graph:

What can you see? Obviously, the acceptance rate of iOS is much faster than Android Take a look at this iOS5.x curve, it is almost vertical, while Android's Gingerbread is obviously not as good as the iOS 5.x.

It is difficult for developers to quickly adapt to the latest version of Android's features, because they must ensure that their applications can run on the most widely accepted Android version, even if this version is very old. iOS developers don't

have to worry about this. What's hot:

dvd ripper for
mac.

After one year, iOS maintain safer on compatibility. The operating system's updates bring many valuable things for the developers. For many new applications, it is also good, because they all look ahead, do not need to like the Android, looking backward.

Such as the iOS 5.0 can run well on all the iPad, developers do not need to support older versions of iOS system, perhaps many people still use the iOS 4.3, but very few, and most people have upgraded, so it is not necessary to develop the the applications which support older versions of iOS. Apple Added Catalogs to Cater iPad 3's New Features

On the occasion of the upcoming release of the iPad 3, Apple added a "Catalogs" in its App Store. Some of the existing apps have already been put into this category, including Catalog Spree, (as shown below), SkyMall, MTG Merchant and other applications, which have been in the App Store for a long time.

Tip for iPad users:

download
videos to ipad. Previously they were classified as living and practical tools class, and are reclassified into Catalogs now.

Catalogs is not yet fully available in the App Store, you can not find it from the App Store menu, so a direct link connected to the Catalogs is empty.

Catalog Spree's CEO joaquin Ruiz believes that the increase of Catalogs is related to iPad 3 conference, it is not so hasty for Apple to increase a category, we believe that Apple's decision reflects the importance of using cases in the App Store

ecosystem. What's hot about iPad:

dvd to

ipad for mac.

It is said that the next generation of iPad will have retina display, so this may be an interactive content increased in order to cater the new features of equipments.

In addition, there are other rumors about the next generation of the iPad: The name is called the iPad HD, the network is LTE mobile broadband and dual GSM / CDMA network, and RAM is increased to 1GB.

Resolution Exceeds PS3, New iPad HD Game Demos

The new iPad was officially released early this morning, under the support of Retina Display and processor A5X, what new experience can the new iPad bring on applications? In order to show the extraordinary strength of the new iPad, Apple prepared a number of games and applications at the press conference.

Something about the new iPad:

dvd

to the new ipad converter.

First was the "SkyGamblers" developed by Japanese game company Namco, it is a flight shooting game, somewhat similar to Namco's "Ace Combat" series. On the big screen in the conference, "SkyGamblers" showed stunning graphics effects, both the modeling of the aircraft and the background's dynamic effects give people the feeling of domestic aircraft level.

Another game was the "Infinity Blade: Dungeons" brought by EpicGames, the game is the sequel of "endless sword", but the style was changed to ARPG style similar to "Dungeons & Dragons". The scenes and characters details of the game are very fine under the Retina HD screen. iPad tip:

how

to convert dvd to ipad. In addition, the new game added HDR, motion blur and other lighting effects.

Well-known office software company Autodesk showed "Sketchbook" at the press conference, it is a professional drawing software. It can turn the new iPad into an electronic drawing board, users can create beautiful paintings by touching different brushes, the simple operation allows users without art base to graffiti easily.

The three software demonstrated on the press conference shows the powerful features of the new iPad, i believe that the high-definition applications and powerful games under the Retina display will become the mainstream. iPad related:

i0n1c: Start Cracking the New iPad

For many iOS jailbreak novices, maybe they only recognize Pod 2g, Chronic Dev Team, iPhone Dev Team and so on, because just these great God brought us the first perfect jailbreak after the release of iOS 5. Tip for the new iPad:

convert

videos to the new ipad. But we also can not ignore those jailbreak experts in the earlier version of iOS, such as Comex, i0n1c and Geohot.

Comex and Geohot these two young talents have been recruited by Apple and Facebook, although there are rumors said that they have left the company, but according to the present situation,

they have drifted further and further away from iOS jailbreak.

What about i0n1c? This famous hacker and security expert who is committed to developing 4.3.1, 4.3.2 and 4.3.3 jailbreak issued a statement via Twitter a few days ago saying the new iPad booked is about to arrive, at the same time he will study the jailbreak at the first time.

We all know that the new iPad is different from iPad 2 both in hardware and software - equipped with A5X chip, preloaded with the iOS 5.1. So for i0n1c, the difficulty is undoubtedly by far the most enormous. What's hot:

video

to ipad converter. We certainly hope that he can complete the new iPad's jailbreak as soon as possible. But at the same time, sources said i0n1c will only leave the jailbreak of the new iPad for personal use, he has no intention to release jailbreak tool.

Mac Application Flutter: Use Gestures to Control Music's Playback and Stop

If you are happily listening to music on your mac, suddenly, someone wants to chat with you, this time you must press the stop button, and begin to re-play until the end of the chat. Tip for mac users:

mac dvd rippers.

Currently, there is a start-up company who launched a new application Flutter which can save your trouble of clicking on the button, you only need to wave the gestures in front of the computer camera, then you can play or stop the music.

This is a free application based on Mac client, once it starts, it will make the camera keep open. Mac tip:

flv

to mp3 mac. When you listen to music in iTunes or Spotify, you can make the music stop playing just by making a stop gesture within six feet from the camera.

Flutter is currently in closed testing, yet it only supports

two gestures, stop and play. It may support more gestures in the future, such as skip to the next.

This is a very innovative idea, when you are very busy for parties at home, suddenly there comes up the phone or you need to stop the playlist, using gestures to manipulate is very useful.

However, it should be noted that you should not use the applications which uses the camera such as Skype when you are using Flutter.

How to Decrypt PDF Files

Maybe you like to read all kinds of PDF files in the web, yeah, we can often find brilliant solutions in these documents. However, you can not use it completely, they are often encrypted, you can not edit or print it. Here i will show you easy ways to help you decrypt the PDF files. Decryption ways for encrypted PDF documents:

1. You can download a pdf

password remover, but tool is a tool after all. Sometimes it also can not decrypt some complex password. At the same time sometimes violently decrypted PDF files will be garbled.

2. Adobe PDF printer is usually installed when installing the Adobe Acrobat software. This is a good thing, you can print the encrypted PDF to Adobe PDF, printing the PDF document into a PDF file. Using the software, you can convert any files which support printing into a PDF document.

After saving, you will find the PDF document encryption is removed, at the same time, you can edit it. Is it amazing? Of course, some PDF documents may contain special fonts, after printing it to PDF file, you will find that some fields become garbled. At this point you can use more professional PDF printer.

The New iPad Has Problem on Dissipating Heat

As Apple's new iPad led global tablet computer field once again, the quality problem is also put in front of everybody. Tip for the new iPad:

play
videos on the new ipad.

Such a post appeared in a forum, users said that the system will automatically shut down after using the new iPad for a long time, and will pop up a message saying that iPad needs to cool down. The user said that he used the iPad in direct sunlight, it seems it could lead to electronic equipment problems.

Different from iPad 2, New iPad has a larger battery and a faster chip. Therefore, it is inevitably easy to heat up, and the same with all Apple iOS mobile products, it does not have the cooling system. iPad tip:

ipad
video converter for mac. iPad's specifications page lists the operating temperature range is from 32 degrees Fahrenheit to 95 degrees Fahrenheit (0 degrees Celsius to 35 degrees Celsius). Apple representatives did not immediately respond to the situation.

An Easy Way to Copy the Text in PDF Files

Sometimes, we need to copy a little text from a pdf file, especially when we are writing papers. But some pdf files can not be copied because of the layout, encryption and other reasons.

PDF related:

convert

pdf to word on mac. This time we need unconventional means to achieve this seemingly impossible task.

Principle of copying the pdf files which can not be copied is:

1. Convert Pdf into a specific format images; 2. Use OCR (Optical Character Recognition, the process of scanning the text data, analyzing and processing image files, accessing text and layout information) tool to identify the text in the picture; 3.

Done.

First of all, we should make sure the tools we need are already installed. Here take MS Office 2007 for example: Find "Microsoft Office Document Imaging" under "Microsoft Office Tools" in the Start menu. If you don't have the program, you can run the Office setup file, select "Add or Remove Features", and select "Microsoft Office Document Imaging" in the "Office tools" node, then it can be installed.

Then, use the PDF Reader or Adobe Reader, select "Print", select "Microsoft Office Document Image Writer" printer. If the original PDF file is very larger, such as newspapers, etc., click Properties to set enough large page. Expand reading:
edit

pdf text on mac. The output format select the TIFF, anyway, as fine as possible, after all, we have to use OCR recognition on the documents printed out.

Finally, use "Microsoft Office Document Imaging" to open the tif file just generated, use the cursor to select the blocks of text which you need to copy, and then select "Tools" -> "Recognize Text Using OCR". When the progress bar has completed, you can choose to copy or directly import it into word.

Fast Internet Due to LTE technology Causes Exhausted Package Traffic

The new iPad supports 4G LTE technology, which significantly improves the connection speed of the mobile devices. Internet speed's upgrade has brought new problems, that is, data Packages will soon be exhausted. You may concern about this:

how
to transfer dvd to ipad.

According to Wall Street Journal's reports, a user used up 2GB data traffic package within two hours, originally the 2GB package can be used in the 3G network for a month. The user used the new iPad to watch sports games live, the network speed is very fast under the 4G network, live video's picture quality is very high, but the drawback is that the traffic will soon be exhausted.

Some time ago, it was reported that AT & T is ready to provide developers with a new option, allowing developers to pay traffic costs for the users who use their own applications. This model is basically the same with the form of the 800 toll-free. Currently the traffic in 3G packages simply can not apply to 4G network, because the speed is too fast, a lot of traffic will be used unknowingly. iPad related:

PDF's Development Trends

Initial PDF was only seen as a page preview format, rather than a production format. However, the market's feeling is not the case, market expectations changed the focus of this format, and also changed the use of the product. What's hot about PDF: convert pdf to jpg

mac. At present, global markets are filled with a variety of e-book readers, and has replaced printed media in many areas.

The reading rate's decline on printed media is largely because the readers turn attention from paper media to electronic books. Although the electronic book's market sales can not be compared with the traditional book market, but it is developing rapidly. Most e-reader manufacturers are supporting the PDF format in whole or in part.

Adobe announced on July 13, 2009 that PDF / Archive (PDF / A) has become the official national standards approved by the National Standardization Management Commission as an electronic document long-term preservation format, and it came into force on September 1, 2009. The PDF format has become the industry standard on digital information. Expand reading:

Let Van Gogh's Painting "Starry Night" Flow at your Fingertips

How many people know how to appreciate Van Gogh's famous painting "Starry Night"? And how many people can even make full use of their creativity and imagination to play the painting Van Gogh? iPad tip:

dvd

to ipad converter mac. Today, an iPad application can give you this opportunity.

As early as last month, the Greek artist Petros Vrellis has developed the PC version of this application, in less than a month, he has been trying to bring this application to the first-class touch experience iPad. His efforts obtain success, "Starry Night" interactive animation application was officially added to the App Store. When "Starry Night" is presented in the iPad, people can not help reaching out and touching, and miracle appears, "Star" is flowing at your fingertips.

Unfortunately, plans can not keep up with changes, when the developers worked so hard to come up with iPad version, Apple has already released the iPad with Retina screen, Starry Night Interactive Animation went to the App Store too early to support the Retina resolution. What's hot about iPad:

convert

dvd to the new ipad on mac. The image quality effects are a bit unsatisfactory, but full of creativity, it is worthy a try.

States and Regions with the Highest New iPad Activation Rate

The new iPad made a sales record of 3 million at the first weekend, so which districts are the first batch of new iPad consumers from? Online advertising network Chitika tracked new iPad's largest market - actived areas of the United States and found some interesting phenomena. Useful tip for iPad users: video to ipad.

The first batch of new iPad consumers are mostly in coastal states. Chitika's report showed that they combined the new iPad's activated data they tracked and U.S. Census Bureau's data and found that, the states and regions with the top five new iPad activation rate are: California, Hawaii, Nevada, Washington DC, and Washington State. According to the data from U.S. Census Bureau, the income of these states (and regions) are relatively high.

Chitika found that if they classify these areas with the standard of "coastal" and "inland", the rate people in the coastal areas buy a new iPad is higher than the inland areas. The income of coastal areas are 10% higher comparing with the inland areas.

Therefore, it is not surprising that the higher-income consumers would be more willing to buy Apple's latest new iPad.

What's hot about iPad:

video

to ipad converter. Obviously, if the consumers have extra discretionary income, they can buy a new product, the price can reach up to \$ 500.

Which One to Choose: PDF or DJVU?

DjVu is an image compression technology developed by AT & T Lab since 1996, and has become one of the standard image file formats. A large number of application examples have proved that DjVu can replace PDF as a mainstream technology in network transmission, scanning documents, digital photos and image files!

Technically, DjVu is superior to PDF on converting the written documents into electronic documents, there is no doubt that it has small files, high quality and low cost. Related tip:

convert djvu to pdf on

mac. In fact, some inviable projects in PDF were completed successfully in DjVu. But is DjVu right for your project?

You should use DjVu if your documents have the following characteristics:

Your documents contain photos and / or color and / or other complex graphics.

The file size is very important. For example: CD or dial-up users need to download your file from a busy network.

You have a big project with very little budget. In addition, the costs on getting small PDF files by scanning are very high, especially when they are not just black and white documents.

Many people concern in the content of your files. If you place some information which are important to visitors on the Internet, they will be willing to tolerate the small trouble of getting the DjVu plug-in.

Perhaps a combination of both? PDF conversion may be expensive or not, depending on the characteristics of the material and the

amount of labor need to pay for reaching the target.
Fortunately, DjVu has been a relatively cheap option. In the cost of DjVu projects, the largest component is scanning. Expand reading:
free
djvu to pdf converter. Because the increased costs is the least, it is feasible to provide clients with two forms of documents at the same time for a lot of projects.

The Shortage of iPod Nano Shows the New Generation Will Come in September

In addition to the iPhone 5, iPod nano's good news is also coming! According to local media reports in Germany, the German manufacturer Shell Germany has ordered iPod nano from Apple online store as prizes for rewarding employees, but it has encountered an unexpected problem during delivery. This vendor received notification from Apple employees, saying the company will no longer supply the old iPod nano, and hinted that Shell Germany can wait for the arrival of the new iPod nano in September. You should get some iPod tool for the upcoming new product:

dvd

to iPod converter for Mac.

A few days later, the shortage phenomenon has spread to the United States. According to the latest news, the four major U.S. retailer Amazon, Target, Wal-Mart and Best Buy stores have stopped the supply of the iPod nano. If this case happened before the traditional autumn conference, we can almost see the completely new iPod nano this year.

Previously, there were news said that Apple will launch the iPhone 5 in September, as well as iPad mini and the new iPod nano, this confirmed the news again. Apple launched the sixth-generation iPod nano in September 2010, by now, the product line has not been updated, it is also reasonable for Apple to announce the new iPod. Learn more about iPod:

<http://www.dvdtoipodtouch.biz/>.

The news said that the new iPod will have a greater improvement in function, including Bluetooth 4.0, camera and "Watch-style" design.

Kindle Fire HD Users Can Pay \$ 15 to Cancel Advertising

According to the reports, Amazon is clearly changing the pricing policies of its Kindle Fire tablet computer. Amazon said, it will allow the new Kindle Fire tablet computer buyers to pay an additional \$ 15 to close the built-in Tablet PC ads. More about Kindle Fire:

play

dvd movies on Kindle Fire.

Amazon launched a larger size Kindle Fire tablet computer last Thursday, the sales price is 159-599 dollars. Amazon wants to challenge Apple iPad on prices and additional content. Just in a day, Amazon changes the price.

Amazon said, these Tablet PC will provide ad called "Special Offers" to help reduce the price. These ads will appear when the screen is locked. Kindle Fire related:

download

movies to Kindle Fire. However, when the reports said that Amazon will not allow the purchaser to pay to prevent these advertising like before, many criticisms towards Amazon appeared on the online forum.

Then engadget and cnet website reported on Saturday said Amazon's pricing policy has changed.

Amazon spokesman Kinley Pearsall said in the e-mail reply to Reuters questions, as for Kindle Fire and Kindle Fire HD Tablet PC, the users can choose to pay \$ 15 to cancel their advertising. We learned from users of Kindle Reader product line that they like our "Special Offers" ads. Few people choose to get rid of them. We are pleased to provide users with this choice.

When Amazon released new wireless tablet PCs, it has not obtained the approval of the U.S. Federal Communications Commission (FCC). The FCC requires that the products are safe to run and will not interfere with other signals. Amazon is expected to get approval before sales begin on November 20. Expand reading:

Making Notes on PDF Documents: iAnnotate PDF

Do you know iAnnotate PDF? It allows you to make notes on ordinary PDF documents! Think about it, using iPad's beautiful screen to add a comment or outline the key content on a PDF file freely, is it quite practical?

After opening this software, our first impression is that, it is well-designed, and its clear layout is very easy to use. This perhaps is the benefits coming from the iPad's large screen, if it is on the small cramped screen like iPhone, the interface will become no regulations when more functions are added. If you are a PDF user, you can have a look at this:

convert

jpeg to PDF free.

When using iAnnotate PDF, the first thing you need to do is to open a PDF document. Then you can enjoy the wonderful features coming with iAnnotate PDF. One of the features of this software is that it has quite a few useful annotation capabilities, such as underline, increasing personal signature, delete, and so on.

Another point is also great that iAnnotate allows you to open multiple PDF files at the same time, which we have never seen on the iPhone or iPod touch, perhaps because the screen is too small to achieve. PDF tip you should know:

convert

from PDF to jpg. Multi-document function is more valuable for business.

iAnnotate PDF also allows you to customize bars, you can remove from the tool bar or add tools and remake their orders. Making Common tools readily available can greatly improve work efficiency.

Although we have said so many benefits of iAnnotate, but this does not mean it has no defectives. File transfer is one of them, PDF files should have been synchronized back and forth easily between iPad and PC or Mac. Related tip about this:

how to edit PDF Files on

Mac. In fact, you can download the software dedicated to a PC or Mac to make the transmission more smoothly. However, when we tested the file transfer functions, we have encountered a lot of problems, and it is quite strenuous to make the files normally transmitted. But the good news is that the latest version makes uploading files faster and stable.

Overall, this is a very practical application on the iPad.

The Importance of PDF Reading

PDF is a universal file format that preserves all fonts, formats, colors and graphics of any source document, regardless of the application and platform used to create the document. It has the following advantages:

Ease of reading: With free Acrobat Reader software, you can view and print PDF files from any computer. Intensive PDF files are much smaller than the original source files, you can download the file on the Web at the same time quickly display the page.

Hot PDF tip:

change

jpeg to PDF.

Particularly suitable for printing: PDF files are based on PostScript language image model. It can guarantee precise, accurate color printing effect no matter in what kind of printer. PDF will faithfully reproduce each character, color, and image in your originals.

Particularly suitable for viewing on the screen: Whether what type your monitor is, PDF file's accurate color matching can ensure faithful reproduction of the original. PDF files can be enlarged to 800% without losing clarity. More about PDF:

PDF

to jpg converter free.

Efficient Browsing: When creating PDF, you can add bookmark and web link to make the PDF file easy to navigate. Besides, you

can directly use electronic notes, highlight, underline, etc. to annotate the PDF files. When viewing, you can zoom in and out a file in order to adapt the screen to your vision.

Cross-platform: PDF is independent from software, hardware, and created operating system. For example: you can download a PDF created on a Mac operating system, then read in Windows. Learn more: [click here](#).

Kindle Has Zero Profit? True or false?

Recently, according to the reports, Amazon CEO Jeff Bezos said in an interview that as for the two products - Kindle Paperwhite and Kindle Fire HD, and even any previous Kindle devices, Amazon is almost always unprofitable. In other words, the product price is almost fairly with the produced costs. This argument may not convince the majority of consumers, however, from the cases that many Internet companies use the way of sending hardware to sell software, there is some truth in the zero profits of Amazon hardware products. Kindle Fire related:

add

watermark to dvd video for Kindle Fire on Mac.

The media said that the zero profits hardware strategy of Amazon is very different from Apple's market approach, because the iPhone and iPad let Apple earn a lot. However, Amazon's this strategy is not uncommon in the market. For example, consoles Xbox 360 and the PS3 almost have no profits, the real money come from games and game console peripherals. Although you can not reach like apple, both sell software and hardware to make money, but in terms of the way, through this hardware zero profit mode, just like the Amazon provides a hand pushing shopping cart for everyone, the Kindle Tablet is responsible for playing a role of such trolleys.

It is understood that, Amazon said they are more concerned about whether consumers will continue to use the Kindle, rather than

whether consumers will buy the Kindle. And it is still continuing to introduce new Kindles. What's more about Kindle Fire: convert mkv for playing on Kindle Fire.

Of course, there are comments that the iPad has occupied more than 90% of the global tablet market, even the Kindle really want to make money, it is not so easy.

You know, iPad Air is really hot these days! After its release, several analysts and experts commented that this product not only put Apple's own business to a new height, but also has a very positive impact on the whole field of mobile payments. They said: "One pound of weight, 9.7-inch Retina display, 10 hours of battery life, 64 bit A7 processor, these data will allow further popularity of mobile payments."

The reason why iPad Air will cause the healthy growth of mobile payment services is "slimmer and more powerful". Is this enough? Compared with the smart phones, the biggest drawback of tablet computers is the relatively bulky size.

However, with the birth of iPad Air, we see the possibility that tablet PC will become lighter and thinner. Coupled with the rising overall performances, consumers will gradually accept the mobile payment on a tablet, it is not completely nonsense.

Currently, as for the tablet mobile payment area, iPad has the absolute advantage. According to statistics data released by Monetate at the first quarter of 2013, iPad occupied 89.28% share of the e-commerce site traffic. Although it was slightly decreased compared to last year, iPad's leading place in the field of tablet online shopping is still very stable.

Halloween Time, Apple Recognized the Inadequate Supply of iPad Mini 2

We all know that, today is Halloween Day! In accordance with the tradition festivals, including Halloween, Christmas and Easter, which correspond to November, December and March, and in the middle there is a global New Year's Day, which will be the sales season during 2013-2014 holiday. But till the spring of next year, the iPad mini 2 is likely to occur the coexistence phenomena of continue selling and shortages.

Resource:

Halloween Promotions

According to the media sources, after Apple releasing iPad mini 2, the questions of the release time and the possibility for consumers to purchase become their concerns. As for Apple, whether this product can render an explosive sales in a short time directly challenges the capacity.

Recently, Apple's current CEO Cook frankly told the media in the interview, iPad mini 2 indeed experienced the capacity problems in the face of the upcoming sales season, and it is expected that iPad mini 2 is difficult to achieve balance between supply and demand.

But Apple feels that, in addition to iPad mini 2. In contrary, iPad Air actually has abundant supply, it can make up for the shortage of the market, but this seems can not play a relevant role for those consumers who are optimistic about iPad mini 2.

iPad Air Can Last 24 Hours as Wifi Hotspot

Recently, some user did a test with the newly bought iPad Air, he used an iPad Air of LTE version as a personal hotspot station to launch WiFi so as to test its life time, and got the unexpected results of up to 24.08 hours.

The user used a 13-inch Retina version MacBook Pro to access WiFi signal emitted by iPad Air, and kept a constant download rate of 100KB/s. Finally, iPad Air's running time really exceeded 24 hours, which is the maximum life time among current tablet PC on the market.

Previously, some media has done the same endurance test on the LTE version of iPad 3. When the download speed kept constant 50KB/s, iPad 3's battery life reached up to 25.28 hours. In other words, if the download speed was set the same as iPad Air, the life time will be shorter than 24 hours, interested friends can personally try the test.

iPad Air tip:

How

to Transfer Media Files from iPad Air to Computer

On November 1, Apple iPad Air was officially listed, consumers are hurrying to get their long-awaited product which is said to be the most perfect tablet in the history by the media. As we all know, compared with the previous generation, in addition to the upgrade of processor, iPad Air's biggest feature is becoming lighter and thinner.

And now, it was proved that its battery life is also very domineering, which has been recognized by consumers and the industry. In addition, the 128GB iPad Air has been sold out within few hours in the United States.
