Google+ landing on iPad and iPod Touch

According to some media reports, Apple's iPad, iPod touch users today get their way for that Google + iOS application today for iPod touch, iPad use of users to download.

According to the 9to5Mac.com website reported, iPad version of Google + application is just the original version of iPhone application screen resolution to 2 times, the other did not have any improvement. It hope to get an independent version of the Google + application to people is not a good news.

The latest version of the Google + Google + since the end of the 6 application is introduced since the release of a series of software update update. These constantly updated will promote the rapid growth of Google +. In more than a month, Google + has about 25000000 users.

In addition to supporting iPad and fixes some flaws, the new iOS app for iOS users with some updates. The most eye-catching is Google + free mobile chat" huddles" added some new features. In the updated version of the application, the user can hide huddles, sets the approved who can chat with you, who can't chat with you and set up a page to initiate a new huddles function.

Google has launched an independent Android operating system Google + application. There is also speculation that Microsoft Windows Phone version 7 Google + applications are also being created. Even if the Google + is just a simple invitation service, does not prevent the user from love in it, a few days ago its user number has increased to 25000000.

Google + brand home is better than Facebook: search experience.

1. A better search experience

Lead to paid search advertising cannot link to the Facebook home page is an important challenge is the Facebook.com domain name producing ad click-throughs is low, this is mainly because the user domain and does not match the query results. But Google + but because Google search status and benefit, Google may be given a search results page color marker, ranking first convenience, search on the benefit will become advertisers choose Google + brand home the biggest factor.

2. More customization

Facebook advertising model is limited to advertising, video and several other models, only for a few brands to provide opportunities. But by reference to Google + personal home page, I expect the personal home page on both sides of the huge blank page will provide advertisers with the brand of the enterprise web page customization, display advertising or media advertising opportunities. Google + users may or because I ad layouts and hate me, but I want to point out clearly is, Google can allow the brand in the

YouTube channel advertising or layout page. Google + brand home can provide better brand experience, help brand promotion special promotions attention.

3. Better analysis

Used Google Analytics friends know it can provide very detailed data, including the user on each page, the top content, related websites, geographical information time index. It seems the Google will integrate Analytics into Google Google + brand home, thus the brand operator can obtain more valuable information, including their user groups, user consumption content as well as they come from he fang.

"Sapphire Mystery" on Blu Ray is Just Around the Corner

As a

cartoon movie fan, what special movies are you

watching? What are you expecting for a new cartoon movie?

Today there is a piece of good news for us is that King

Records (Japan), Audio and

video distribution companies recently announced

it will launch the classic television animation, "

Sapphire

Mystery," the

blu

ray suit on November 23 this year,

The general introduction of Sapphire Mystery

"Sapphire Mystery" (also

translated as "Incredibles Sea Nadia") is a

French writer Jules Verne's classic "Haideliangmoli" adapted from

the TV animation work, from 1990 to 1991 in Japan broadcast. This

animated film by the Japanese company Toho and KORAD animation

company responsible for the production, directed by renowned

Japanese animators Hideaki Anno, and later with

the role of design is "Evangelion," "Summer

Wars" and the original meaning of the line famous Ching.

"Sapphire Mystery," the era of the stage play is 1889, the

story held in Pakistan from the year Li Wanguo Expo begins. Like the invention of the young John occasional mysterious girl Nadia, the two together for some reason then embarked on a risky journey.

According to reports, the "Sapphire Mystery," the script had originally come from the famous animation director Hayao Miyazaki from Japan. Miyazaki early years prepared the TV animation planning, but the limited conditions did not make it, they themselves change making the film "Sky City." However, this planning is not void, some years later, it had turned into a "sapphire mystery."

It is said that classic television animation will be released on blu ray, if you are a blu ray dvd player, you can play it on your blu ray dvd player. Of course, if not, you can also enjoy it with an hd visual enjoyment as long as we download a

free blu ray ripper and then rip blu-ray to hd video format. What's more this scheduled release of the "Sapphire Mystery" set in Blu-ray image is the original 35 mm film version of the animation made for HD conversion, the original film in the missing parts with other media versions of the patch, the content is very complete. This product's packaging by the original meaning of the role of the designer lines redrawn Chen, package also comes with a content of more than 100 luxury yearbook. For animation fans, the early nineties, this attractive new products must not small.

Given that, what else can we do? In my humble opinion, all we need to do is just wait and then watch this blu ray movie in the first issued time to have a big enjoyment.

Terrific Tips to Choose DVD Copy Software for Mac

mac optical

driver cannot meet our demands anymore, now
more and more

dvd
copy
software

come out. Then how to
choose the best and most suitable
software for you? Here are 8
tips I summarize for selecting
Mac DVD Copy Software:

1. User-friendly and Simple Operation.

This is basic requirement. If you do not like
the software, you can not operate easily and
no need to choose it.

2. Fast Burn Speed.

The time for burning a movie would be the faster the better
in case for not influencing copy quality according to the fast
paced modern life.

3. Support Copying Various DVD.

DVD+R, DVD-R, D5, D9...Just buy the DVD disc your want
to use for copy.

4. With Compression Function or Not.

D9 disc is much more expensive than D5, you can save a lot of
money if copy software with compression function.

5.

Burned DVD Can be Played on DVD Player, not
only on Mac.

6. Support External Driver or Not.

If you do not want to change the region code on your computer according to different region DVD, the best choice would be having an external driver. So your copy software must support external driver.

7. With Trial Version.

The software would be better with trial version so that you can try before purchasing.

8. Great Support Service.

It is the adding service for product. If you have the better support service, you can use the program more comfortable without worrying to pay extra money for continuous upgrade version.

After fiddling with many mac dvd copy software and wasting several DVDs, I finally selected Wondershare DVD Copy for Mac. This software has everything you would like to see in a Mac DVD copy software, also very easy to use, just follow 5 steps:

1. Insert DVD Disc.
2. Select DVD Copy Method.
3. Program Settings .
4. Choose Place to Save Your DVD File.
5. Start Copying DVD.

With all the above requirements, I bet you will not make a mistake when choose a dvd copy software for mac. More good choice for us, more better enjoyment for us. In order to have a good quality and a great visual enjoyment, all you need to do is just follow it.

Looking Forward to See Apple's September 7 Products

As an apple fan, have you learned that A Japanese website reports that Apple has a media event planned for Wednesday, September 7

th to announce the company's new line of iPods. It also claims the iPhone 5 will ship in September or early October. The Kodawarisan website reports that Apple's annual music-themed event will take place on that day, though suggests that Apple won't announce the next-generation iPhone at the event, instead waiting until later in the month or perhaps October.

It's not clear if the new iPhone will be revealed the same time as the new iPods, according to the report, or at a separate event a few weeks later. Other conflicting rumors put the phone launch in either September or October. Moreover, the report from Japan does apparently come from an inside source, MacRumors has ascertained, though much is lost in translation. Also, Kodawarisan puts the date of the event as September 8.

Normally it announces a new iPhone at its WWDC conference in June, but that didn't happen this year, further fueling the speculation of an early fall iPhone release. It would make sense to do the iPhone and iPod announcement at the same time, but it's tough to know what the logic is coming out of Cupertino is these days.

There has been additional speculation over the new iPod this year. First, there are the photos that emerged, apparently showing a new 1.3-megapixel camera for the iPod. Also, a drop in iPod sales have left others to wonder if it might be time to scale back the iPod family.

In fact, 9 months is often the apple iPod release time, actually iPhone products are usually released in summer, but the apple off to the new iPhone release time, recently some iPhone 5 rumors in September 7th will come to an end.

As an apple fan, I bet every one is very looking forward to own a new product in the first issue time, but on the other hand, I want to say that as apple fans we sometimes need to calm down our excited mood, because even if On the September 7th Apple really released iPhone 5, its formal shipping to wait until 10 months, Now we look forward to the following three points: Does low-priced version of iPhone really exist? Whether the iPhone 5 appearance would have a big change? Does the 3G version of iPod exist really? What the truth is unknown, all we can do is just to wait for the answer in September 7th by Jobs.

In any case, Apple's gameplan involves innovating its way into the hearts and minds of mainstream consumers, who will then allow Apple to innovate its way into their wallets as well. Apple is just as greedy as the next corporate giant. And second, anyone who's been paying attention to Apple knows that products like the iPhone 5, iPad 3, and future launches like the iPhone 6 and iPad 4 after that aren't going to be the slightest bit less innovative if Android does happen to disappear along the way. Apple's evil gameplan, in which it takes our money and gives us exactly the kind of products we were hoping for, won't be interfered with either way.

There has been additional speculation over the new iPod this year. First, there are the photos that emerged, apparently showing a new 1.3-megapixel camera for the iPod. Also, a drop in iPod sales have left others to wonder if it might be time to scale back the iPod family. As for iPhone design rumors, there's not enough space to recount them all here, but you can get caught up quickly with our iPhone 5 rumor rundown.

The report from Japan does apparently come from an inside source, MacRumors has ascertained, though much is lost in translation. Also, Kodawarisan puts the date of the event as September 8.

There has been much debate in the iPhone 5 rumour mill about whether the iPhone 5 would launch in September or October, or perhaps be announced in September ahead of an October launch, though others are more interested in how many new iPhones Apple will announce rather than when.

Watch Spy Kids in High Definition on Blu ray

Are you waiting for a grand film just like me? Can we have a good opportunity of watching the first issued blu ray movie on our pc then? Yes, we can do it you should say. We don't have to rack our brains to look for a latest movie to watch. Now, here is our movie fans' chance of watching a grand movie- Spy Kids.

Spy Kids is the first film of the Spy Kids series. It is directed and written by Robert Rodriguez. It stars Alexa Vega and Daryl Sabara and was released in 2001. Rodriguez also produced with Elizabeth Avellan and Guillermo Navarro and was the editor of the film. The film was released in United States theaters on March 30, 2001 and on VHS and DVD on September 28, 2001

DIRECTOR/WRITER ROBERT RODRIGUEZ'S "Spy Kids" trio of movies get a shiny new Blu-ray treatment from Lionsgate just in time for the Aug. 19 premier of "Spy Kids: All the Time in the World in 4D" (3D + Aromavision). "Spy Kids 4" will showcase the return of sibling agents Carmen Cortez (Alexa Vega) and Juni Cortez (Daryl Sabara) as well as Uncle Machete (Danny Trejo). In "Spy Kids 4), Jessica Alba is spy "Mom" and Jeremy Piven ("Entourage") is the new villain. If you have a blu ray dvd player, you can copy this blu ray film to your computer and then enjoy it with a high definition visual enjoyment. Of course, if you are not a blu ray dvd player user, you can also do it as well , all you need to do is to rip the blu ray movie format by a

free
blu-ray ripper
, which can record any DVDs/Blu-ray Discs/Media Files that you are playing on your PC, and output various video formats, including format of iPad, iPod, iPhone, Zune, PSP, Cellphone and so on. Free Download Now It is a very easy-to-use software, you are able to use it without any help document.

Carmen and Juni Cortez live with their parents, Ingrid and Gregorio, who they believe are boring, unaware that their parents are actually semi-retired international spies, working for an organization called the OSS (Organization of Super Spies). Originally, Ingrid and Gregorio were enemies until they fell in love and got married. They retired to some degree when they had their children.

More details of it:

At the beginning of the film, Carmen's main concern in life is with the unwelcome responsibility of babysitting her brother, Juni, and is therefore usually mean to him. However, underneath her abusive exterior, Carmen is hiding secrets of her own: she skips school, and has to wear diapers at night due to having problems with bedwetting.

Known for hard R movies such as "Desperado" and "Sin City," Rodriguez still seems an unlikely choice to have developed a successful children's franchise (Although adults love them, too). The original films were based on his own family with plenty of input from his kids. It was another family incident that inspired "Spy Kids 4," when Jessica Alba arrived at a luncheon dressed in full star-gear along with her kids. Her baby experienced an "exploding diaper" incident while they were getting out of the car and, like a typical parent, she dealt with it right along with her glamorous professional mission. Obviously, Alba had the makings of a true spy mom.

I bet after long years, the "Spy Kids" movies remain family favorites. Get ready for the new film by catching up on the prequels.

(no subject)

Although apple provide online store iOS application, the application can make iPhone and iPod Touch users conveniently use the apple online store, now Apple intends to make online shopping experience more simple. The new site, which could arrive sometime in 2012, was first reported by 9 To 5 Mac.

In the past few months, we observed that Apple wants to use

mobile webpage edition online shop online store instead of the native application. Now it looks like that apple is towards to this direction and plan to release the magic mobile webpage edition online store next year.

It is reported that this new online store will showcase the ability of apple in the powerful webpage, revolutionary program experience. Moreover the new webpage program will mimic the native iOS applications today to a full extent. But there are a big difference lies in that the webpage edition online store will be more likely to visit. And the users do not have to go to download the app if the user wants to purchase a product.

We do have some concerns about some of the functionality from the native application being ported over to the mobile web version. Notably the feature that provides users with functionality (shown above) based on the physical Apple retail that they are currently visiting. Perhaps Apple will keep the App Store version around for that feature or will figure out a way to move it to the web browser. After all, iOS Safari can access a user's current location.

But whether the program can completely replace the original webpage's all functions is still doubtful. In particular, the primary application can judge whether you in the Apple Store through your current position. And apple can also use a mobile version of Safari location function to determine the location of the user.

Apple plans to debut the mobile version of the online store sometime in 2012. As aforementioned, the project has been shelved multiple times before, so it is possible that the project will once again be moved to the sideline in favor of other product development. The project has actually been announced and then shelved a couple times previously, according to reports, so seeing this one actually emerge in 2012 may not actually happen as projected. Still, though, I find myself wondering if this is an unnecessary upgrade, a "leave well enough alone" sort of situation. It's not as though Apple's current Apple Store app was buggy or particularly difficult to work with, so why fix what isn't really broken?

But that's why it's great to have you guys around, to ask those questions. Are you thinking that the Apple Store mobile version could use some tweaks and upgrades? What do you think would be a boost to the Apple Store's capability? Or do you think that

this is just a waste of Apple's time and development capability? No matter how you feel about it, we welcome your opinion down in the comments section below!

Additionally, as an apple user, especially for an ipod user, you maybe met some problems such as how to download music from ipod to computer, how to transfer ipod to mac etc, if so, you can come to our ipod to computer center for you , I bet from here you can have a extra harvest.

The Sex and The City Prequel Show

As a female, whether are you crazy about the tv series the Sex and the City? To be frank, I am a honest fan of these sexy girls, after watching the tv series, I feel that every one of them have their special and adventurous life. However, this life is always seldom in our daily lives. I really admire them for their lives.

The more details of it

Sex and the City is an American cable television and film series. The original run of the show was broadcast on HBO from 1998 until 2004, for a total of ninety-four episodes.

The quirky series had multiple continuing storylines and tackled socially relevant issues such as sexually transmitted diseases, safe sex, and promiscuity. It specifically examined the lives of big-city professional women in the late 1990s/early 2000s and how changing roles and expectations for women affected the characters. The show was primarily filmed at New York City's Silvercup Studios and on location in and around Manhattan. Since it ended, the show has been aired in syndication on networks such as TBS, WGN, and many other local stations. However, basic cable outlets at local stations excise certain explicit show content

To prequel or not to prequel, that's the question surrounding

the next step for Sex and the City. Talks of prequel film gained traction earlier this year, one that would be based on Candice Bushnell's two young adult novels The Carrie Diaries and Summer and The City that explore Carrie Bradshaw's late teen to early adult years. Rumors even spread with Blake Lively's name being thrown around as the actress who would play the younger Samantha, while Selena Gomez, Emma Roberts, and Elizabeth Olsen join the cast as the earlier models of Charlotte, Miranda and Carrie.

After learning these details, are you wondering about how to copy TV series to DVD disc on your Mac? This how to copy TV series to DVD on Mac tutorial is going to show you an easy way to convert and burn TV series to DVD on Mac. Copying TV series to DVD on Mac can be quite easy if you have the mac dvd burner in hand. This DVD burning software for Mac allows you to copy any videos and movies to DVD disc on Mac. Even the TV series is also able to be burned to DVD on Mac.

Tutorial: How to Copy TV Series to DVD on Mac?

Step 1: Load Files

Directly drag the target files to into the program. You will see the imported files in the right window.

Step 2: Start Conversion

Choose "DVD Disc" as your output way and click "Burn" icon at the bottom of the main interface to copy TV series to DVD on Mac.

Tips: You can edit the videos at will by cropping, trimming, adjusting effects, adding watermarks etc. before copying TV series to DVD on Mac.

You can get the TV series on your DVD disc within two simple steps. Want to have a try with this easy-to-use Mac DVD burning software? Just get it from the link below to give it a try now. Once you have tried, you'd never regret.

Make iPad a Helper of Your Meal Order

It is well known that, the iPad is a line of tablet computers designed, developed and marketed by Apple Inc. primarily as a platform for audio-visual media including books, periodicals, movies, music, games, and web content. Its size and weight falls between those of contemporary smartphones and laptop computers. The iPad runs the same operating system as the iPod Touch and iPhone-and can run its own applications as well as iPhone applications. Without modification, the iPad will only run programs approved by Apple and distributed via the Apple App Store (with the exception of programs that run inside the iPad's web browser).

Like iPhone and iPod Touch, the iPad is controlled by a multitouch display-a departure from most previous tablet computers, which used a pressure-triggered stylus-as well as a virtual onscreen keyboard in lieu of a physical keyboard. The iPad uses a wireless local area network ("Wi-Fi") connection to access local area networks and the Internet. Some models also have a 3G wireless network interface which can connect to HSPA or EV-DO data networks and on to the Internet. The device is managed and synced by iTunes running on a personal computer via USB cable.

Apple released the first iPad in April 2010, and sold 3 million of the devices in 80 days. During 2010, Apple sold 14.8 million iPads worldwide, representing 75 percent of tablet PC sales at the end of 2010.

Today there is a piece of news report that The United States of America 's Atlanta called a " dough" restaurants, mainly providing pizza service, claims that their restaurant combines music, food and scientific art, which makes people not only can enjoy a wonderful meal, but also enjoy the restaurant atmosphere of art and music style. If you are one of this restaurant, you must be very agreeable. Now let's have a better learn of this charming restaurant together.

One of the secrets of this magic restaurant lies in that it changes the papery menu into an iPad order. In this way, the user can sweep all kinds of delicious food, beverages. Watching the HD menus will make you a good appetite, of course, here is absolutely not cheap. In addition to the meal, diners can also call services, and even can change each table's music playing. How amazing it is!

The fixed iPad on a desktop stent is a bright spot, half arc type scaffold looks very simple, but full of the sense of art, but also very practical. Support for iPad on the table to maintain a certain distance, so the waiter cleaning table, accidentally spilled a drink on the table, but also to avoid damage to the iPad.

Ok, now, I bet you have a good understanding of this magic restaurant, ant then what are you waiting for? Just take her to hit it, I bet you two guys will have an unforgettable experience.

Dance With Apple's iPod and iPhone

After working for a whole day, do you want to have a pleasure? Do you want to have a music or film enjoyment without trouble? Yes, it is abusolutely possible for you and me.

As an insider, I bet we must have learned that some foreign media reported recently, apple is planning its own iPod and iPhone into a mobile version of Cara OK, so that users can more

conveniently and improve their singing level of singing. So we can sing and dance with apple to some extent.

The invention of the apple iPod music player in the global scope is a big success, which completely changed the habit of listening to music. Now, the company is preparing to teach the whole world sing. Apple submitted a patent application shows, the company plans to iPod music player and iPhone intelligent mobile phone into a mobile" karaoke" player, to teach amateur singers master the correct pitch and tone. This is good for the amateur singer and it is completely a gospel for them, because this technology will enable the often off-key singer is no longer out of tune

Allegedly, the apple company is bidding for a new patent, the patent shows, a new mobile Cara OK system being developed, in the new system the user can freely choose their favorite songs to sing (of course these songs to download).

But compared with the traditional Cara OK , it is different that iPod and iPhone can pass through the system to collect user tone, and with the correct tone makes comparison. If the user go wrong, iPod and iPhone will enlarge their mistakes, makes its way through headphones that. In addition, the new system and the beautification function, that is to say, when the user's voice is really not very good time, the system can carry on the modification to allow a user to sing sound more appealing.

More surprise for us is that this device will allow the user to select their favorite songs humming along, these songs show a video picture and lyrics, very similar to the traditional" karaoke" player. But the difference is, iPod will be able to analyze their voices, and compares it with the correct singing songs are compared. If they sing out of tune, will be timely to give them feedback information, thus help them to correct mistakes. So we don't have to worry our performance on the ipod player, all we need is just to have a show try. Of course, if you are very care about your performance, you can also transfer your own work to your computer to have a review, at this time, we can transfer our own music from our ipod to computer by using an ipod to computer transfer tool. If the singing of the pitch and tone grasp well, they will get a reward, their voices will be converted into a very good music hall effect. However, when they are out of tune or singing the wrong pitch when, this equipment can magnify their mistakes, so let

them from his wearing headphones hear it.

At present, mobile Cara OK system appear on the market time has not been disclosed, but Apple music store has begun to offer Cara OK songs. Believe it will work with iLife set of music playing as motivate customers for the love of music.

Additionally, as an apple music player fans, you can find more useful tips from here:

how

to transfer music from ipod to computer,

how

to watch movies on iphone 4, after learning these tips, I bet you will be a great genius of mobile version of Cara OK.

Celebrate Apple's New Mac

Although the current technology products consumers are enjoying the convenience and joy leaded by the changing mobile equipments such as ipod touch, iphone 4, ipad etc, some news pointed out that Apple is to launch a new mac computer different with the previous ones in the design in this end of year.

MacRumors noted in its blog post that Macotokara reported that the new products in development will be "absolutely different from current products" by the Apple family. And it is rather than the previously rumored iPhone 5 or the next generation iPod.

Another analysis of the industry, apple is to Mac Pro product for overall improvement, change the desktop bulky body. Of course, it is not as simple as iMac.

Another rumor reported on Business Insider Monday indicated that Apple is going to switch from using Intel processors to products made by ARM. Greg Welch, director of the Ultrabook program at Intel, confirmed to CNET that he has heard the rumors too.

Apple has so far stuck with this same overall approach in current devices, though instead of the Classic Mac and Newton operating systems we have OS X and iOS. Beyond aesthetics and power improvements, laptops have not changed much generally, with the

most radical approach being the MacBook Air. The real advancements came with the evolution of the iPod and touch interfaces to the current iOS devices we see. Apple bridged the touch technology to the Mac with the Magic Trackpad and Magic Mouse, thus altering the way we use and interact with our Macs, but that is about the extent of the major interface changes.

So with all that in mind, what would be new? Most of the radical design changes I can think of have been tried in the past and are likely not what Apple has in mind, like a sea of Netbook designs when Apple eventually created the iPad. Apple could come up with a fun new enclosure, but would it be a Mac that runs OS X off Intel architecture, an iOS device, or perhaps a blend of the two? One might rightly assume Apple would blend Touch into the device, but would that end with merely tacking on a Magic Trackpad, or would it have a new touch-based input altogether? One thing to keep in mind is Apple's new Thunderbolt technology has the potential to really split a computer system apart, and even make it possible to create a set of smaller low-power devices that can be clustered together as needed for increased computing power.

If Apple will be releasing this new new product in September , the fact that the new mac will be listed on the program in November is completely compatible with the apple. At that time, new products and new store will come together.

Whether are you a big fan of game?

What are you waiting for today's new hot game? Now

today's daily recommended bring everyone a new hot online game

called "Exitium: Saviors of Vardonia" (Messiah). This game

has 4 different characters, each character has their own unique

skills, characteristics, equipment as well as the plot, I bet

as a big gamer, you won't miss it. Moreover, this game has

online trading market, and this game allows gamers exchange

equipment online. Full support for iPad HD display. Although 2D

game, but this is by far the most ambitious IOS produced the

most detailed RPG game. If you are using a ipad, you can just

download it and then have a try!

The General Introduction of the Game

Vardonia is a turbulent world. Two hostile Kingdom Arkan and
Abylon in war. A conspiracy to unfold, to explore the hidden truth.

A great story: Redemption, intrigue, betrayal, discovery, sacrifice
and glory, staggered in fierce battle and challenging task. You can
save Vardonia mainland?

Main characteristics:

In the iPhone and iPad custom virtual key position, size and
transparency made!

4 unique character can be selected based on melee, or magic!

The online market, and other game player online exchange
equipment or articles!

The fast-paced combat system. Use skills and magic, passive and active skills, gain and negative states, improve your character!

Game center achievement and ranking!

Grand, beautiful world to explore.

A number of tasks and the branch line mission.

A large number of weapons, armor and clothing await your discovery. They can be a blacksmith upgrade, or use magic gems aggrandizement.

Use your journey to find things to create your unique equipment.

In in-app can buy additional goods (this is for convenience only part of game player).

Magic scrolls, can improve your fighting skills, or throughout the continent in transmission.

The archive from the trial version can be directly transmitted to the complete version, without the need to restart.

How cool this online game it is! Have you a blood boiling feeling? Just pick up your ipad to download it and compete with your real rival.

Where to Go without Steve Jobs for Apple

It is known to all that apple's CEO, Jobs, who long as Tom Curise some have drag back the Apple" rotten" edge. This technology stocks on Wall Street was almost forgotten, jumped to become the world's largest market value of listed companies and exceed the Exxon Mobil (ExxonMobilCorp) . But in a few hours ago, this group of science and technology " God", is about to leave his throne, and will never come back - due to health reasons, it may be last time to leave

this life and his own apple.

The Apple of today is hugely profitable, with tens of billions of cash, a 90 percent share of the tablet market, a rapidly growing smartphone business around the world, and the only truly profitable personal-computer franchise left. This is where Steve Jobs leaves Apple as CEO: on top, with momentum to carry it further up.

But the most important thing about what Steve Jobs has done in the past 14 years at Apple is this: It's not all about Steve Jobs. Jobs has built this company in his own image. The executives are people who he trusts, people who have worked with him closely and understand his product philosophy. The creation of Apple University is an attempt to codify what we might as well call the Apple Way, which is essentially the Steve Jobs-driven product and business philosophy that has shaped today's Apple.

From his resignation letter, we can read a little sentimental feeling of Jobs: I had been told, if one day, I can do not my duty and continued as apple CEO, I will inthe first time to notice. The day has come." It looks a bit like Xu Zhimos' verse, it is Jobs a few hours ago, submitted to Apple's resignation letter.

There is no doubt that his resign will be a great loss for internet industry. And this is also the consistent view. Whether does apple have its beacon without a spiritual leader, for apple. Will the apple fans still be in love with apple without worship lear? Although the old Joe have completed the apple short layout before his regine,. now iPhone5 has been in production, iPhone6 also has been in the planning, where does the further apple do? It is really full of various unknown things.

Tim Cook, Apple's new CEO, is not going to be Steve Jobs. He's going to apply the business acumen he's always applied. There are other members of Apple's executive team that, likewise, will fill in pieces of the puzzle. Steve Jobs essentially wrote the rulebook for how Apple runs, but it's not like all of Apple's employees sit around waiting for Steve Jobs to tell them what to do.

Is there a danger that Apple after Jobs will slip? First off, there's no guarantee Apple would continue on the roll that it's been on, even with Jobs at the helm: It's rare to see a company succeed so spectacularly for so long, and all good runs come to an end. And of course, there are plenty of examples of companies that

have lost their way after the departure of a charismatic, creative executive-Disney comes to mind.

Will iPhone 5 be Popular Without Jobs

As an insider especially for an apple user, I bet most of us have learned this explosive news that the CEO of apple, Steve Jobs has resigned yesterday. We maybe have also learned that the man who created the 'Anything, Anywhere' Age. Without him, without today's apple to some extent, I can safely say.

The Apple board announced in August 25th the company CEO Steve Jobs resigned, Tim Cook took over the position of CEO. Reportedly, Jobs will turn to serve as chairman of the company. Everyone admits that it is who(steve jobs) that completely and successfully has built apple with his leadership and keen perspective. Given this, every apple product has been a fashion all the time.

Although Steve stepped down the altar, but his legendary life, is not out of sight, apple lovers for Apple products also did not decrease. Before he leaves office, iPhone5 as a the new generation of iPhone, people have been discussing it to a white-hot stage.

Since the iPhone4 released-, iPhone5 rumors have been spreading out all over the world. According to a reliable source, iPhone5 will soon open the mysterious veil and meet with the people of the world, in addition to upgrade and improve the function of iPhone4, iPhone5 has its own biggest bright spot in the application of biometric technology and RFID application. In

addition, iPhone5 will also improve the camera, will be promoted to 800W pixels, and the use of 4G network, will make it more clear and smooth video call.

More details of iPhone 5 you can look at firstly:

iPhone 5 Back Camera & Battery leaked

Another iPhone 5 parts leak have occurred, this time, its camera and battery components.

With the October release practically confirmed by the recent AT&T noise, another parts leak is like icing on the cake in terms of what all iPhone 5 enthusiasts want to hear.

MacRumors have identified multiple sources of suppliers who are allegedly distributing these parts. From the picture, it is clearly seen next to its iPhone 4 counterpart, similarly sporting a LED flash embedded closely to the CMOS sensor.

iPhone 5 Parts Leaked, Black and White Colors

Two iPhone 5 parts have leaked recently, other sources state that these parts were spotted from multiple online suppliers. Among the parts included are replacement camera lens and replacement headphone jacks, which comes in both black and white.

The headphone jacks further prove that the new iPhone will come in both black and white, unlike the iPhone 4, which was released with only black available due to a manufacturing debacle which caused the white model to only be available last April.

Similarly, parts had leaked before the iPhone 4 was released, although there is a clear difference with this recent leak.

Show You Around the History of Apple's Mac

Believes it or not, it has being a hot topic among the apple fans that Apple CEO has resigned and his resignation has been a foregone conclusion. However, it is who has created a glorious era of Apple. Yes, here we are both discussing the great genius, Steve Jobs. To commemorate his contribution to apple, to the world, of the world, we do make a simple series Macbook review.

MacBook as a successor of IBook and PowerBook has gone through nearly five years, during which the evolution of their complex models for one purpose only to make a strong performance and excellent user experience. Intel Core PowerPC platform makes great strides to enhance the performance of the MacBook and change the heavy criticism, while "public" for the Intel platform to enable more consumers to join the "small minority" groups to improve.

In February 2006, Apple released the aluminum shell of the MacBook Pro, 15 and 17-inch screen to enhance the apparent resolution (1440 × 900, respectively, and 1680 × 1050), plus the ATI Mobility Radeon X1600 graphics card support more suitable for designers use. The first generation of the MacBook Pro uses Intel Core Duo processor of up to 2.4 GHz or 2.5 GHz, memory, expandable to 2GB, hard disk area is 80 GB, 100 GB, or 120 GB range. MacBook Pro with Apple Remote, Mac OS X v10.4.4 systems with iLife software, and add a power supply unit, the absorption can be easily incorporated magnetic power adapter MagSafe, backlit keyboard, and touchpad. 2.54 kg (15.4 inch) or 3.1 kg (17 inch) weight, such as the appearance of 15-inch PowerBook, but the body

is only 2.59 cm (1 inch) thin.

May 16, 2006, Apple officially released the first generation of targeted ordinary recreational users of the MacBook, although the shape of the machine compared to the iBook G4 before, the change is not obvious, but do not forget that every product of apple must have the world's most advanced technology and hardware configuration at the time of release. The 13.3-inch little guy, too, Apple's first use of mirror-screen display designed to make color more vivid and greatly enhance the brightness of the screen. In addition, Intel Core Duo 1 was a strong processor and Intel GMA 950 graphics core powered by a strong performance in making the whole premise of substantially reducing the heat. The storage side and MacBook PRO no major difference. It is worth mentioning that the MacBook has changed the traditional providers of black models for consumer choice. (Note: The black version was discontinued in October 2008)

In January 2008, Apple a cross-age known as the "world's thinnest notebook" MacBook Air is officially released, this is Steve Jobs of Apple products are involved in one of the most important release. It really let the world witness the notebook into the paper bags, MacBook Air also allow the emergence of numerous domestic and foreign manufacturers to emulate, but it turned out to be failed without apple's influences and strategy.

June 8, 2009, MacBook Pro 13.3-inch in the new members join on the basis of the molds are also made changes, is still an all-aluminum shell, the difference is to use computer numerical control machine tools used to make shuttle parts process will be cut into a single block of aluminum unibody material, so that the number of parts and stitching at greatly reduced while the more earthquake-resistant. Using the LED display panel, an increase of service life, while also reducing the thickness of the notebook. Display glass also used the iMac's design, extended to the frame extension. Touchpad has also been greatly improved, in addition to the previous Multi-Touch technology, will also touch areas and key functions together, smooth glass skylight reduced friction and more wear-resistant.

2011 released a new version of Macbook Air. Its predecessors, Air without the slightest change in appearance, but the new hardware it has a faster computing speed, tested its performance even more than the 2010 models of the Macbook Pro, equipped with a new OS X Lion System make it more diversified operations and more

humane. In the configuration, it uses Intel's second generation i-series low-voltage Core Duo processor, 11.6-inch optional maximum 64GB SSD, 13.3 inches optional maximum 128GB SSD, two sizes MacBook Air are equipped with Thunderbolt interface.

White Control of the Favorite- Next iPod Touch

Although Apple has given up in principle, white (MacBook), after all, the occasion of the earlier release of White Lion has been missed. Although the company has not responded clearly, in essence it will gradually leave the white

Apple's product line . Of course, the white control fans don't have to be very disappointed, because Apple's other white products for the enthusiasm is still as usual!

Earlier it was heard that Apple will launch an all-white iPod touch, but has yet to get more conclusive evidence, but finally has found the industry media have carefully about this product that traces of white! According to industry media to provide the latest news shows, a piece came from iFixDirect called the Five Dynasties white photographs iPod touch front panel, as shown above.

From the perspective screen we can see the size is still 3.5 inches, no frame-free design, and currently is almost the same with the iPhone 4 on the market. but the internal structure of this new product has been revealed, it will use the same components with the iPhone 5, especially one of the A5 dual-core processor. But, after all, from the grapevine, there are until now no other news to support this view. Another news revealed that this product will be the end of September or October release, and most likely is released simultaneously with the iPhone 5.

Meanwhile over on Apple Insider, Josh Ong also reports on the leaked white fifth-generation iPod touch part and says that back in July they heard news of a white iPod touch along with an analysts suggestion that the iPod touch would not be receiving a specs update this year. Because the release of the iPhone 5 has been pushed back, this has also overshadowed any iPod touch release. Apple Insider also informs that iOS evidence hints that Apple is not viewing an iPod touch update as a wholly new generation as references mention an iPod touch 4.2, so it does look as though there will be no major overhaul this time around.

Now I bet What we're almost certain to see here is a sort of silent release of this color device as the iPhone 4S or iPhone 5 releases this Autumn in a massive display, whatever it ends up being in the end. We're expecting the iPod Touch to last for some time now even though Apple's mobile operating system has clearly been more successful on their iPad and iPhone lines. Whether or not the white color is meant to increase sales for this upcoming season is certainly a moot point, though a possibly upgrade to an A5 chip, as we're expecting in the next generation if iPhones, may not be out of line.

Focus on this week's new movies on blu ray and dvd
Now, in order to have a short rest, please put down your busy work , let's focus on this week's grand movies. I believe it will be a great help for your work efficiency after a short entertainment. The common saying says alternate work with rest, so in order to have a better work efficiency, why not quit your job to taste this week's grand movies? What are you thinking about? Don't

hesitate, Just do it!

It is reported that this week's new movies mainly focus on 'Top Gun' on Blu-ray and 'Prom', which will make you nostalgic.

Top Gun: -"Top Gun," Grade B: The action film/romance starring Tom Cruise and Kelly McGillis is being re-released to mark the 25th anniversary. It's been a quarter of a decade but "Top Gun" will still have you feeling the need for speed.

The action part of the film has to do with an elite group of pilots who compete to be the best in their class and earn the title of "Top Gun." Cruise and McGillis provide the romance as a hot-shot test pilot and a civilian instructor who do their own form of flying.

The movie, released in 1986 at the height of the Cold War starred Tom Cruise in the role of "Maverick" along with love interest Kelly McGillis. It became instant classic with signature lines like "I feel the need, the need for speed" and "You can be my wingman any time." The film became the highest grossing film of 1986, raking in \$176 million domestically and \$353 million worldwide.

Prom: Who can forget their Prom? Whether you went or not, it is a marker on one's development timeline and Disney captures that spirited period impeccably in the original film Prom. The film hits home on Blu-Ray Combo Pack, DVD, Movie Download and On-Demand and is a family friendly flick with a cast full of talented up-and-comers. Prom is a cross-class look at the rite of passage that is the late spring dance from two perspectives: Sophomores and seniors. We found the film delightful and fun and would revisit the memories of Prom anytime. Extras on the home release are highlighted by the don't-miss Last Chance Lloyd, deleted scenes and music videos from the rocking soundtrack.

Rio Makes Good Use of Blu-ray 3D

Ah, What movies are you expecting for? Have you ever thought about watching a 3d movie with your another half? Yes, love it, just do it! I bet it will be a fabulous thing to take her to watch a 3d movie in the theatre.

Now, good news for you is that you will have a great chance of watching a 3d movie with her. Ok you maybe is cracking your brain to figure out what movie it is on earth, now let's look at it together. It is the popular 3D movie Rio. It has just released into blu ray, all of us can have a big chance of watch a 3d blu ray movie now, as long as we rip blu ray to our computer or ipad etc.

More details of Rio

Rio, often promoted as Rio: The Movie, is a 2011 American 3D computer-animated musical comedy film produced by Blue Sky Studios and directed by Carlos Saldanha. The title refers to the Brazilian city of Rio de Janeiro,[4] in which the film is set. The film features the voices of Jesse Eisenberg, Anne Hathaway, George Lopez, Jemaine Clement and Jake T. Austin.[5] The film tells the story of Blu (Eisenberg), a male blue macaw who is taken to Rio de Janeiro to mate with a female. He eventually falls in love with Jewel (Hathaway), a free-spirited macaw, and together they have to escape from being smuggled by Nigel (Clement), a cockatoo.

Rio wings onto Blu-ray with an absolutely gorgeous looking AVC encoded 1080p transfer in 2.40:1. As trite and predictable as some elements of the film undoubtedly are, from a visual standpoint this is state of the art CGI and the Blu-ray reproduces in often stunning grandeur the incredible palette the many artists working on the film brought to the table. From the first quasi-Busby Berkeley dance sequence, we're confronted with all sorts of outlandish bird creatures, many in stupendously bright and beautifully saturated color. Deep blood reds and unbelievably gorgeous cerulean blues fill the frame, with teals, aquamarines and turquoises also resplendent. Fine detail is exceptional, especially with regard to the rendering of the feathers, which flutter seemingly individually in the virtual breeze. Actually by comparison the human characters come off as a bit two dimensional (no pun intended, considering this film's 3D theatrical

presentation). But it's the birdlife here that is the main calling card, as well as the beautifully rendered Rio backgrounds, and those pop with abundant vibrancy that should delight most any videophile.

Rio is one of the best animal-populated animated movies to come along for a while. Its mature approach, endearing characters, vibrant music and color, and lack of really dark, scary moments give it broad appeal across generations. Moreover, it is one of the best Blu-ray 3D movies currently available. If it doesn't convince you to get a 3D TV right now, nothing will.

Given that, why not grasp the precious to have a copy of this blu ray movie, what are you waiting for? Just do it timely.

Samsung Galaxy S player-similar to ipod touch

As we know, more and more high tech and advanced products have been emerging into people's lives, especially for those young. It is often the case that we can see more and more people watching their ipod movie, playing ipad games, listening iphone music on the go. Yes, it is not a legend, every one of us can be a fashionable person, as long as we have equipped with these devices.

Recently, I bet you must have learn that NSamsung (micro-blog) in Germany on Thursday 2011 IFA consumer electronics show announced the launch of several new products, including a new generation of portable music player Galaxy S WiFi 3.6. Samsung this year with a strong trend of Andorid GALAXY range of products and the success of the company has become the current hot. At present, Samsung has started to expand GALAXY-Series family of products, the latest release of GALAXY 3.6 using Andorid system, and support WIFI function.

Notably, the Galaxy S WiFi 3.6 has not been placed in

intelligent mobile phone or computer classes, in contrast, appears only on Samsung 's existing 4 inch and 5 inch Galaxy S music player as a complement. This means that the Galaxy S WiFi 3.6 and apple iPod touch belong to a category of products, while providing and intelligent mobile phone almost exactly the same application and multimedia capabilities, and the appearance looks smart mobile phone, but not the phone.

Samsung GALAXY WIFI 3.6 device is not a real phone, it does not provide the SIM card slot, but provides WIFI access the Internet. Also, the machine uses a Andorid2.3 Gingerbread operating system, equipped with a 1GHz processor. In addition it is equipped with 3.65-inch HVGA resolution screen, equipped with a 2.0 megapixel camera and support for 720P HD video playback. Samsung said GALAXY 3.6 mainly in order to meet user demand for multimedia content, convenient use at home users.

This may be for those who wish to purchase special media playback device user quite attractive, this equipment is cheaper, not need to sign a binding contract of wireless. Galaxy S WiFi 3.6 is equipped with a resolution of 480 x 800 3.6 inch display, 1GHz TI OMAP processor, a VGA front camera and a 3000000 pixel rear camera. If the choice of resolution lower camera and a AMOLED display screen, the player will be cheaper.

It is reported, Galaxy S WiFi 3.6 in the UK are available in two versions: version 8 GB and 16 GB edition, are sold for 149 pounds (\$242) and 169 pounds (\$274). Samsung has yet to be revealed this equipment in the United States a specific price. Samsung said in IFA consumer electronics show was also released several other important equipment, such as Galaxy Tab 7.7 and Galaxy Note, which is used to fill the intelligent mobile phone and computer gap between, equipped with 5.3 Inch Touch screen.

Samsung GALAXY 3.6 will be released in October, is divided into 8GB and 16GB versions, priced at 149 pounds (about 1500 yuan) and 169 (about 1750 yuan) pounds.

So what are you waiting for? Love her, why not buy her a similar ipod touch? More choice, more opportunity for you! Don't hesitate, just do it!

Who will be the last conqueror, hp or apple

As we know, with today's high tech's rapid developing , more and more products have being emerging into people's lives, such as iphone, ipod touch, ipad, ipad 2 etc. Today , we can see more and more touchpad in the market, and we are enough lucky to grasp this new tech trend.

It is reported that in order to clear inventory, HP plans to produce 10-20 million units more TouchPad, TouchPad new round of sales will begin in October. HP said earlier that they will be limited production last TouchPad, TouchPad price cuts to meet the market demand for the tablet. Although HP TouchPad at the time of the original gives some heart commitment to consumers, but the TouchPad Tablet PC market did not have a huge impact, Apple iPad tablet PC market is still the master.

But with the original \$ 499 HP TouchPad prices down to \$ 99, TouchPad increased sales. The current round of selling the TouchPad HP makes some people speculated may therefore retained TouchPad business, a substantial price reduction strategy is to obtain a user. But now it seems unlikely to happen. HP is probably already sold 80 million units TouchPad, if you continue to follow the \$ 99 or \$ 149 price, they will be easily sold 20 million units TouchPad.

There are another news claims that the cult-like popularity of the discontinued HP TouchPad is a story that won't die, even though the tablet in question already has. The runaway story has grown wildly out of proportion to its middling popularity at \$99 and its non-existent sales at full price before that, which stands in sharp contrast to the fact that Apple and its iPad 2 dominate the tablet

market in terms of marketshare and mindshare. The TouchPad doesn't even quality as the second-place story, as the disconnected collection of tablets running Android OS have collectively carved out the number spot. And yet the HP TouchPad story just won't die, until Apple kills it. No amount of iPad 2 television commercials will change that, nor will any attempts on the part of Apple to remind tech headline writers of just how dominant iPad sales are. The only way to kill the TouchPad story, if Apple sees it as a problem, is to go ahead and introduce the iPad 3 this fall.

However, we can also see thousands of good comments from the iPad users: the iPad can run almost all 150,000 of the iPhone and iPod touch apps you know and love (not every one is compatible, but the vast majority). It does this in two modes, the first is a scaled down version in the middle of your giant screen, while the other is a pixel doubled iteration. Both of these leave something to be desired, and we can't say that anything besides gaming really ends up looking okay. It's nice that Apple has included the functionality, but keep in mind that you are locked into what is essentially an iPhone simulator, complete with an iPhone keyboard (scaled up if you're using the pixel doubling, which doesn't look that great). It's tremendous because you have access to applications you may need to use, but it's not something you're probably going to spend a lot of time with.

Given that, who will be the last winner, hp touchpad or apple iPad? It is hard to say, doesn't is? All we need to do is just wait and see what will happen in the flat computer market.

Additionally, as an iPad user, you must be very concerned with:

transfer

music from iPad to mac,

transfer

videos from pc to iPad. With these two extral guides, you must be more good at playing with your iPad.

The things you must be concerned about iPad 3

As an insider,
you and me

must
have learned that apple
ipad 3 is
just around the corner. Once we log
in the internet, we can see the news or
rumors related to
ipad 3 here and there. Yes, it is the word of
mouse, which has made ipad 3 more
and more popular and more and more magic in
people's eyes.

Rumors
about
the future of Apple's iPhone and iPad are
all the rage in the mobile space. From the
executives at competitors like Google and Samsung to tech-forward
consumers hoping to get their hands on the next-big-thing as soon
as it hits store shelves, Apple's next moves are a guessing game
full of speculation and rumor. But not all reports are created
equal. Some surmise

things
that are just plain crazy-that Apple would deign to run
Android on its devices. Others, like speculation the next-gen
iThings will have bigger or higher-resolution displays, seem more
likely. In either case, customers and enterprises are clamoring for
information on what they should expect from Apple when it finally
unveils its new iPhones and iPads. With that in mind, here we offer
up a quick cheat-sheet taking a look at rumors swirling
about the iPhone 5 and iPad 3 that we think
deserve the most attention. Will they all come true? As with other
Apple products, it's impossible to know for sure. But one thing is
certain, if the iPh
one and iPad 3 do come with these features, they will be
highly desirable on the open market.

Recently there is a report broadcasting that the iPad 3 will
be thinner and lighter, but it also could be pricier. According to
an AppleInsider report, Apple has pegged two suppliers to provide
its third-gen tablet with sleeker batteries. With the upcoming iPad
3 to feature a thinner, lighter battery module that is widely
believed to be priced 20-30% higher than iPad 2's, Simplo

Technology Co. and Dynapack International Technology Corp., both Apple Inc.'s contract suppliers of iPad and Macbook battery packs, will hence secure a surefire profit drive for the near future.

For the two companies producing the batteries, Symplo Technology and Dynapack International Technology, winning Apple's iPad 3 business would be a coup. With Apple raising the bar again on battery life, this could drive additional revenue for battery producers. In order to stay competitive, other tablet makers are certain to adopt the more advanced battery technology for their tablets as well.

Additionally, the batteries will adhere to the standard in battery certification: IEEE 1625 (Institute of Electrical and Electronics Engineers). For those of us who don't speak battery standards, that means that they will be safer, more reliable, and of course more expensive. The article also estimates the batteries being shipped in the 4th quarter of this year, meaning that the iPad 3 could be not far behind. Keep in mind that Apple's yearly release model would put the iPad 3 at coming out around April of next year.

Given that above predictions, we have a better learn of iPad 3 more or less, if you want to get the most information, all we need to do is just wait and see. I bet we will not be disappointed in the near future. Additionally, as an Apple user, some hot tips you maybe faced with the following problems in the near future: how to transfer dvd to iPad, convert flv to iPad

New rumors of iPhone 5

In the past few weeks, the public has been rumored that Apple's smart phone iPhone5 is likely to be released in early October 2011. And in general, there are some time difference between the release of Apple's iPhone smartphone and listing, if iPhone5 is officially listed in the beginning of October, then there may be the iPhone 5

hours will be officially released around the end of this month, This is what we see today, the theoretical basis for this rumor....

According to foreign websites Fast Company said it has acquired by Apple insiders, Apple's next-generation iPhone 5 smart phone later this month will be on a weekend release, such as September 19, 2011 or 2011 September 26. Of course, according to the latest rumors today to understand, then, that Apple released the first official iPhone 5 smart phone, also announced details of its related information, including time to market and from the specifications to the retail price, then Apple and one or two weeks time to prepare for iPhone 5 smart phones and scheduled backup, and then officially opened in early October to sell iPhone 5

Recently, a foreign media 9to5Mac have reported Apple iPhone 5 will be similar to the iPhone 3GS curved back cover, the credentials of two sets of solid silicone iPhone 5. September 9, News, news from AppleInsider, the company called L & Y announced several technology companies in Shenzhen for iPhone 5 of the protective sleeve, and with the last 9to5Mac similar claims to the silicone sets, suggesting that the new iPhone 5 will be thinner and more sleek.

In addition, the volume buttons are a bit small changes occurred by the round on the iPhone 4 more like iPhone 3GS into the old iPhone, and more on the strip. The bottom becomes a curved, rounded body design. In fact, these protective cover to a certain extent like a design for the iPod Touch, but the mute switch and headphone jack at the top of the fuselage let users have to wonder: this is only used on iPhone.

This may be just some of the company's hype, but as the network spread rumors of new iPhone release date has been broken one by one, the real iPhone 5 release date getting close. For Apple, with or without Steve Jobs, it also will be a grand event. For now, there are some people beginning to test some new features of Beta version of iOS 5 system. How many versions of the new iPhone in the end, we have no idea. Compared to the iPhone 4, this new iPhone is a revolution or a mere innovation, what expectations are most people waiting for? All we need to do just wait and see what will happen in the new generation of iPhone.

Additionally, as an iPhone user, if want to learn more useful tips, you can take time to focus on:

Experience star wars on your own Blu-ray home cinema systems

What are you waiting for? A movie, a concert, or a grand party?

If you have no ideas until now, you can take into account watching

a

blu

ray movie on

your computer, it will be also a nice weekend for

you.

As an insider, I am very happy to learn that It's been a while coming, but George Lucas's seminal sci-fi films (and the other three) are now out on Blu-ray with the long-awaited release of

Star

Wars:

The Complete Saga which hits stores tomorrow.

The set includes each of the films - Star Wars: A New Hope,

The Empire Strikes Back, Return

of the Jedi, The Phantom Menace, Attack of

the Clones and Revenge of the Sith - plus over 40 hours of extras.

So clear your diary for next weekend, bookend it with a couple of

duvet days, don your Vader costume and settle in for

the Star Wars marathon to end them all.

The super-keen can head down to the official Australian

launch at JB HI-F in The Strand Arcade at Pitt St

Mall, which kicks off at 6am. Wearing an

Imperial Stormtrooper outfit is optional, but presumably

recommended.

Star Wars: The Complete Saga on Blu-ray is \$139.95, though

you can currently snag it at JB Hi-Fi for \$119. Who wouldn't pay that to see

Jabba the Hutt in HD? Watch episode previews and play free Star Wars games from the TV show. Anakin, Ahsoka, Obi-Wan and rest of the Jedi Knights lead the Clone army of the Republic against General Grievous and the evil forces of the Separatists.

The Star Wars saga continues with the animated series Star Wars: The Clone Wars on Cartoon Network. May the Force be with you!

Recently, it is reported that it is Pioneer, maker of fantastic home entertainment kit, has added four new Blu-ray home cinema systems to its line-up of covetable black, shiny things. What we've actually got is two systems with different speaker options. In this case we can watch blu ray movie on our own home cinema system then.

In the basics range, you get the same Blu-ray playback, combined performance and speaker configurations - with the 414's four tall speakers and the 212's compact set-up. To save money, the basics series doesn't support an iPod/iPhone cradle or Wi-Fi connectivity and comes with a chunkier subwoofer. Plus, all the new Pioneer systems let you watch YouTube videos and browse Picasa albums without a PC - the icing on the stylish home cinema cake.

Additionally, if you are blu ray movie fan, you can learn more tips from here: copy blu-ray movies to hard drive, or rip blu ray to ipad mac, I bet you will benefit from it.

Let ipad or iphone order for you

Have

you ever thought about your

ipad or

iphone can

order for you when your family go to a restaurant

to eat? Believes it or not, It is a fact that your

ipad or

iphone have become able to order for you as

you wish. You don't have to need write your meals in the menu, with

them, you can save your most of time on other things.

According to the latest survey, since the ipad debut from the market, catering industry have listed a burst of electronic boom. Most of city's Shangri-La hotel staff other senior staff have a iPad to order for consumers. Recently, it is reported that a businessmen from nowhere introduce the "upgrade" version of ipad- consumers use their iPhone, iPad, or can be a single point on their own to order the menu, which was called "cloud recipes." How imaginative name for the menu of ipad.

Launched the "cloud recipe" through the local food web. The person in charge had just changed his signature: Take the restaurant recipes to your pocket. "There are recipes provided by the merchants of electronic devices, equipment only on a restaurant menu, but the 'cloud recipe' is the menu of all restaurants are housed in the consumer's mobile phone or tablet PC." The responsible person said, so recipes and electronic ordering system combining the use of Internet technology, allowing consumers to own a smartphone, iPad tablet PC and an ordinary PC to achieve a la carte, this first of its kind in a country.

"Cloud recipes" a la carte approach is very convenient, consumers enter the restaurant after taking a seat, do not call the waiter, smart phone or tablet PC out, enter the restaurant's electronic cookbook address to log in, the restaurant all

the dishes are displayed in photo form, consumers choose the right dishes and the number, click submit, the store will receive a consumer's point of issuing a single, confirmed by the waiter, the kitchen can be the next single cooking. After the meal, but also to share each dish reviews. "Cloud menu' a la carte with a web browser, consumers do not need to download the client, restaurants do not have to buy equipment, simply install the software to print list." The person in charge chaimed.

After some restaurants have tested it, we can draw a conclusion that "Considerable costs savings, customers also feel novel and creative." Jack franc, a marketing person in charge said, "Cloud recipes" The biggest advantage is that no-one service can save a lot of time to order for the consumer when it has a lot of consumers.

Now you must have a better learn how to order with our mobile phones or iPad, we can also take our recipes into our pocket everyday. Moreover, in this way, we can also help us to save a lot of time to enjoy other things such as listening music on iphone, watch tv shows on ipad etc.

Apple Mac plus iPad encroach on PC domain

As an apple fan, you and me must have learned that there are lots of news about iphone 4 broadcasting all over the world, but it turns out to be die. Until now, the new version of iphone -iphone 5's releas news has been delayed again and again.

It is believed that in the Apple product line, the relatively new Macbook air laptop computer and operating system OS X LION, have become the main content in Apple's official website, and also becomes the Apple's main revenue part in the third quarter. According to the Market research firm NPDGroup survey data, Apple Mac series in the third quarter shipments are expected to exceed 4.6 million units, reaching record highs. On the other hand, Microsoft's dominant Windows operating system for the PC market has been a growth slowdown. IDC statistics show that in the second quarter global PC shipments grew 2.6%, lower than expected. IDC research reported that, in addition to Mac, but as the representative of the iPad tablet PC market is eating into the domain.

Although compared to the traditional PC market, Mac sales figures still seem insignificant, but with Tablet PC iPad, the number of overall sales pose a threat to the traditional PC. IDC statistics show that as of January this year, compared with the overall PC market, iPad share of only 7%. However, with the iPad2 market, the proportion rose to 11% already. To the quarter, Apple has sold 925 million iPad, up 142% year on year growth. If count 3.95 million Mac units sold, the proportion will be higher. Given that, you maybe confused about this fact, am I right? How can apple's ipad or mac becomes so popular in the pc market and can be a domain stream in the nowadays? Ok, let's have a look at the survey from the young.

Overall Satisfaction

Well it seems as though Cupertino has hit this one out of the park. 74 percent of all new iPad owners are "Very Satisfied" with their device. They believe that the iPad is delivering in its promise, with iPad, they can play with it freely and without time limit for they can convert the most popular Blu-ray movie to iPad or convert Blu-ray to iPad 2 or play games on iPad on the go or sync iPad with new computer. It has become a

fashion among the young. with only 1 percent indicated in the "Somewhat Satisfied" and "Somewhat Unsatisfied" categories. 8 percent of those surveyed responded with "Don't Know/NA", which leaves "Somewhat Satisfied" garnering 17 percent of the vote.

NPD Group predicts, the quarter MacBook Air will occupy the third quarter Mac shipments of 10% to 20%. Last week, the new Mac air official visit in China mainland market, the lowest price of 7698 yuan configuration. The machine is the same price recently listed in Hong Kong, but the price of HK \$, the minimum configuration is only 6000 yuan RMB to succeed, lead to a large number of Mainland consumers through various channels to buy.

In addition, intentionally or unintentionally, Apple has its own products and to further delineate the boundaries of a traditional PC. For example, many recent new Macbook air for consumers in the forum to reflect, if the machine is installed on Microsoft WINDOWS operating system, more than half of standby time will be shortened. New Macbook air only with Apple's own operating system to achieve maximum effectiveness.

Which will domain china's iphone market, iphone 4 or iPhone 5

Apple's "curve" coverage of

China's 800 million

mobile phone users, both reached the take-all goals. Media

Reporters interviewed one of

my friends: If iPhone5 come, what will

iphone 4 do? My friends asked back: when iPhone4

came, many people predicted the demise of the domestic

mobile phone will be collective. But it turns

out to be that iPhone4 and domestic

mobile phones are all living very moist, and

peaceful coexistence, no problem in nowadays!

Therefore, iPhone5 is still an iPhone, you don't have to worry about the iPhone4 future and domestic mobile phone. Why can we draw this conclusion? If you want to know more detailed information, you can focus your eyes on the following article.

Firstly, iPhone4 is not a dot-gone, it still has taken up a big market. For its various functions, more and more young people like to play with it. With iPhone 4, we can watch youtube videos on iPhone 4 on the go. Ok you maybe confused about the video format is not accepted by iPhone 4, it is right, but we can use a dvd to iPhone 4 converter to help us to convert an appropriate video formats to iPhone 4. As to how to put youtube on iPhone 4, you just need refer to our youtube for iPhone 4 center for you, here I bet you can get the most information you want. Sounds easy, doesn't it? Yes, it is so easy, just have a try, if you are an iPhone 4 user. Moreover, it is alleged that once iPhone5 listed, iPhone4 prices may fall to a great extent, in this way, it can create a big chance of buying iPhone 4. Above all, iPhone 4 is still a popular gadgets among the most users especially for the young.

Secondly, in iPhone5 promotion, or both Unicom Telecom, will not spend too much to promote. First, the impact of annual profits. Second, iPhone brand has been known to no investment. Third, China Unicom has shift its end-strategic occurred. Recently, ZTE, China-made mobile phone Cool cooperation, a high-profile push the domestic mobile phone. So, in some way, iPhone 5 like to be a defeated general compared to iPhone 4 and other phones.

Third, whether or iPhone5 iPhone4 can not dominate the mobile phone world in china. China Unicom's network control are the fastest WCDMA, there is the most extensive telecommunications network coverage. "iPhone walks into the homes of ordinary people" is just a dream, not reality. High-end customers in the telecommunications and 15 million between 1300, analysts said China Telecom is expected to end to provide 1.06 million iPhone. This shows that,

accounting for 90% of the market is still the other brands of mobile phones. For example, in the domestic mobile phone, telecommunications has been dominated by cool one-third of sales.

The things about iPad 3 you must be concerned with

Maybe you are very good at playing iPad 2 such as how to transfer music from iPad 2 to computer, how to watch video on iPad 2 etc, but what are you expecting to iPad 3? Earlier in the day, as an Apple fan, we must have learn that some rumors or news related to iPad 3 that that Apple's next-generation iPad 3 tablet will be built around a new battery which has been designed to be both thinner and lighter than that found powering the iPad 2. And Apple is working with both Simplo Technology Company and Dynapack International Technology Corporation to design and manufacture the new battery packs, which are expected to bring improved battery life and enable

Recently, according to foreign media reports, JP Morgan analyst Mark Moskowitz said, the industry told him that Apple's supply chain has got the third generation iPad prototype, but the device released is no hope in this year. Some media said that Apple plans to introduce a high-end version of the iPad 2, which will enrich the iPad new equipment product line, or to configure a higher resolution.

Moskowitz believes that Apple should not rush to expand the lineup of the iPad, Motorola, RIM and other Tablet PC manufacturers do not Synthesizer, and 2012 would not have improved much.

RIM announced last week, PlayBook listed only a quarter of 20 million units shipped in the previous quarter iPad sold 9.25 million units.

He said, "Sony's lack of iPad tablet-style refined, sleek, user-friendly design on the back of the end, Sony Tablet PC with

Android system, the attractiveness of the Tablet PC not as big on the smartphone."

Moskowitz optimistic about the Amazon Tablet PC, even though he believes the device can not match with the maturity of the Tablet PC, because the shift from touch-screen electronic ink is very difficult. The device is expected to be launched in the coming weeks, configuration, 7-inch color touch screen, \$ 250.

He said, "Kindle Amazon's success does not necessarily mean success in the Tablet PC market until we see the performance of the Amazon, we believe that the potential threat to the dominance iPad Windows 8 until the end of 2012 Tablet PC market.

More infor about ipad 3 you must be familiar with:

The iPad 3 UK release date is a mystery

With Apple unable to meet initial demand for iPad 2, we'd expect a staggered release date for the iPad 3 too: However, Apple could always follow the pattern it has with the previous two iPad launches and do it all in the new year.

The iPad 3 specs include a dual-core processor...

It's possible that the iPad 3 will have a brand spanking new processor, Apple's A6, but if the rumoured release date is correct then time is awfully tight: we'd certainly expect to see an A5, not an A6, in the iPhone 5 when it turns up.

...unless iPad 3 has a quad-core processor

If the A6 is the next stage in the line - and we don't see a new iPad until 2012 - we could also be looking at a quad-core chip from Apple. Quad-core designs will be coming from all ARM partners late this year.

iPad 3 display

Rumours of an HD screen on the iPad 3 gathered pace on 12 April 2011 when Digitimes reported that Apple is asking panel makers to provide screens that are capable of displaying higher image quality than the iPad 2.

On 26 May 2011, we reported that the iPad 3 could launch with a Samsung-made AMOLED screen, following rumours that Apple has been

in talks on the matter with Samsung execs. There have also been more LG and Samsung rumours, too.

Will iphone 5 hit the market on October 5

No matter how long you have being using your iphone 3g or iphone 4, how well-informed of your iphone 4, for example you can jailbreak

iphone 4 and then enjoy various videos on iphone 4 or transfer

music from iphone to computer , or watch movies on iphone 4, we must accept a new challenge to play with the new and upcoming iphone 5. Only accepting the new challenge, can we make progress in the tech domain.

It seems that technologies are waiting with bated breath for iPhone 5, which is expected to launch in October.

The October release date looks probable as the California-based Apple said its iOS 5, the latest version of its operating system, will be released in the fall. Fall officially begins in the last week of September - and for the iPhone 5 to have the iOS 5 pre-installed in it, the launch should be in October. A gaming site called PocketGamer from Britain today released a shocking message: Apple is preparing a conference, iPhone 5 seems to come earlier than expected.

PocketGamer claim that they received a inside information that there will be a conference to announce on October 5 and the a new generation of hardware will be declared, and new products will be to sold in the next week after the confernce.

If the message is accurate, the date October 5, somewhat unexpected, although speculation has focused on the month of October, but most are conservatively estimated to mid-to-late in October. However, these figures seems very interesting if we put them together: iPhone 5, iOS 5, October 5 (10 May).

In fact, it doesn't matter of the release date of iPhone 5, more things we care about is the hardware in the conference. It is said that this year there will be two models the iPhone, low-end iPhone 4s, and drop design iPhone 5, but everything is just rumors. Only waiting to the conference can we see the coming iPhone's appearance.

But before this nervous moment, we can have a first look at some iPhone 5 features.

World Phone with a SIM-less Design:

iPhone 5 is rumored to feature a new SIM-less design with two to three internal antennas for CDMA and GSM compatibility, making it a World Phone. Another rumor suggested is that the iPhone 5 will feature a SIM card slot for other countries except the U.S, allowing users to insert any SIM card when traveling abroad.

Curved Glass Display:

Apple may unveil iPhone 5 with a slightly bigger screen size ranging from 3.7 to 4-inch to counter Android rivals. Rumors of a curved glass display on iPhone 5 have been doing the rounds ever since DigiTimes reported in May that Apple had placed an order for glass cutting machines which are capable of making curved glass covers.

Design

Apple products are known for their beautiful design. iPhone 5 is expected to adopt a teardrop design that is supposed to be slimmer and lighter than past iPhone models.

The new smartphone, which may have an edge-to-edge display, would come with an aluminum plate casing rather than the current glass backing. Rumors suggest a more uniform design across all of Apple's mobile devices as aluminum may be the consistent material used in the upcoming iPad 3 and iPod lineups as well.

Meanwhile, an analyst with Rodman & Renshaw said the form factor of iPhone 5 could be a slightly smaller version of the iPad 2.

Powerful A5 Chip

Apple may fit an A5 chip in iPhone 5 with a clocking speed in the range of 1.2 or 1.5 GHz with 1GB RAM. A5 is the same chip that powers iPad 2. Processors of several Android smartphones are powered by a minimum of 1 GHz processors.

Fire-proof iPhone

Another rumor is that the next iPhone will be a fire-proof phone. Apple has filed a patent application for an advanced halogen-free flame retardant material which could be used in future Apple products. Patently Apple, an Apple Inc. centric blog, has reported that the new material will be integrated into the

manufacturing of Apple products such as keyboards, mice, iPods, the iPad, cabling and more.

Play iso file on mac for free

Many DVD fans would love to save DVD movies as ISO image files or simply copy DVD to ISO for backing up those fantastic DVD files and easily playing them on their media center. Here we will show you how to convert DVD to ISO on Mac by using DVD to ISO Converter for Mac, and manage those ISO files for all the Mac user

When you have several .ISO files you have either downloaded from the Internet or saved as .ISO files on your hard disk, and you want to burn them to DVD discs to play on DVD Player, before burning, let's have a better learn iso files firstly.

What is ISO Image?

An ISO image is an archive file (also known as a disk image) of an optical disc in a format defined by the International Organization for Standardization (ISO). This format is supported by many software vendors. ISO image files typically have a file extension of .iso. The name ISO is the common CD or DVD disc image format based on ISO-9660 standard. An ISO image file contains an exact duplicate of data from the original disc. It includes the data saved on the disc as well as the file system information, such as directory structures, file attributes and boot code. If you want to know how to create .ISO image and play ISO files on Mac, please refer to DVD to ISO.

1. Free Play ISO on Mac with Apple DVD Player

To play a movie that is saved in ISO file format on Mac OS X, start the built-in DVD Player (find it in the Applications Folder, Apple DVD Media Player and it won't be on the Dock at the bottom of your screen by default).

Then in Finder (or on your Desktop) double click the ISO file

to "mount" the ISO movie file. Apple DVD Player will automatically recognize that a movie DVD has been loaded and will start playing the movie immediately.

2. Free Play ISO on Mac With VLC Player

Another, you also can use "VLC" player to Play ISO Free on Mac. Just open the VLC media player and drag the ISO file to the VLC menu. Double click to start playing.

With these methods you can play ISO Files on your Mac, most of all, you can play DVD Movies which saved as ISO files on the newest Mac OS Snow Leopard.

3. Play ISO Free on Mac with Front Row

Now we have to recur the Front Row to play ISO image. Put ISO file into a folder with a movies name, and then put this folder into the Movies Folder. Now you can play ISO Image with Front Row of your Mac.

Note: If you want to burn your favorite ISO file to DVD, you can go to try dvd copy for Mac, it can help you burn ISO file to DVD with high speed and quality.

If you want to get other tips about mac, we strongly recommend you:

dvd

ripper for mac, or

put

dvd on ipod on mac, with these guides, I bet you will be very good at palying with your mac.

Ok, now, after reading this article, you must have acquired the tips to play iso file on mac for free. What are you waiting for, just have a try!

The latest analysis of ipad

Maybe as an ipad user, you don't have to waste your time to predict the trend of ipad, or you have no idea to predict the future trend of ipad, but in some way, I think, it is necessary for us to pay attention to the latest news related to ipad, such as, ipad app, ipad price, ipad market sales etc. Equipped with these latest news, we can have a better learn of the insider news.

Gartner released a report on Thursday that the global media in 2011 Tablet PC sales is expected to reach 63.6 million units, compared with 17.6 million units in 2010, up 261.4 percent. By 2015, flat-panel sales will continue to grow, and in that year to reach 326.3 million units. In 2011, sales of flat panel, Apple iPad occupy 73.4% share in 2010, when the share was 83%. In addition to Apple iOS and Android system, Gartner believes that the other platform's market share in 2011 no one can be more than 5%.

The report shows: Andoid flat sales in 2010 is 251.2 million units, in 2011 is expected to 11,020,000 units, 22,875,000 units in 2012, reached 1.16444 billion by 2015 units. Apple iOS flat sales of 14.685 million units in 2010, 2011, is expected to 46,697,000 units, up to 69,025,000 units in 2012, reached 1.48674 billion units in 2015.

In addition to the two leading platforms outside, MeeGo platform flat sales is 179,000 and is expectef to units, 476,000 units expected this year, 2012, 490,000 units, 177,000 units expected in 2015. Microsoft platform expected in 2012 434,800 units sold in 2015 reached 34.435 million units. QNX platform sales this year expected to be 3.016 million units in 2012 6.274 million units, up to 26,123,000 units in 2015. webOS sales this year expected to be 205,300 units.

Gartner vice president Milanese (Carolina Milanese) said: "In our range of expectations, Apple will still maintain a dominant market share, in 2014 still accounted for more than 50% of the share because Apple hardware, software and to provide excellent service, unified experience, if the opponent does not adopt a similar approach, a very small chance of winning to challenge Apple, Apple had the foresight to create a flat market, it plans to do early on, even down to the component suppliers , such as memory

and display, which makes the iPad prices very competitive, in different models, storage and connectivity options and no shrink. " What's more, more and more users are crazy about iPad, with an iPad, they can not only watch DVD on iPad through a free DVD to iPad converter to convert the video format, but also can they load YouTube videos to iPad

.All in all, with iPad, the young people's life has become more and more interesting and exciting. So it is the real reason why iPad become more and more hot to domain the tablet market.

2011, Android Tablet shipments will reach 11 million units, accounting for 17.3% of the media flat sales. 2010 share of 14.3%. Than expected last quarter, Gartner has lowered the data. Been reduced, mainly because of the low-end flat Android not success in Asia and the Amazon is expected to soon release tablet. Gartner analysts said, RIM's QNX operating system is a promising platform, but it's still in early development. RIM faces a major challenge is how to attract more developers, because it is to difficult times, and the smart phone business increased pressure.

Above all, we can at least draw a conclusion that the iPad has some advantage over other table PC in the nowadays. So, to a great extent, we are not the outdated guys.

Play with your iPod shopping app of ASOS

What high skills do you have in the nowadays? What can you do with today's high tech products, such as iPod, iPhone, or iPad? And what are you thinking to do with them? Play game, listen music, or watch movie, ok, all of these are just ok, but one more choice for

us is to go shopping with our ipod through the internet.

Recently, it is reported that ipod shopping is becoming more and more popular, and it has become a main trend. Here ASOS is no exception.

ASOS.com is the UK's largest online-only fashion and beauty store. Primarily aimed at 16-34 year old men and women, it offers over 35,000 own-label and branded fashion goods. Sales for the financial year ending 31 March 2011 were £339.7 million.

Features

ASOS provides potential customers browsing its content with a number of unique features, including individual catwalk model videos of most clothing items on the site. Additionally, it runs a fashion blog which is frequently updated with articles relating to celebrity and entertainment; links are then provided to clothes on the main retail site which are related to the posts. ASOS is particularly well regarded for its large variety of fashion and beauty goods, as well as for the speed at which it keeps up with the latest fashion trends.

ASOS Mobile

ASOS Mobile launched on October 14th 2010. The mobile site has been designed to work across all devices including BlackBerry, Symbian, Android and iPhone operating systems, and this is reflected in the simplicity of the homepage layout and the navigation options. There are just three options; men, women and outlet, as well as a search box. Each of the three categories contain plenty of further navigation options. Users can browse by product sub-category, by brand, or by trends. There are further options to refine the results also; by size, colour and brand. Users should be automatically redirected to the ASOS Mobile site when they try to view ASOS on their mobile device, however if this does not happen the site can be found by entering m.ASOS.com into the device's web-browser.

ASOS's headquarters are located in Camden Town, an area in North London, within a building known as Greater London House. Its main fulfillment centre is in Barnsley, Yorkshire. The company has seen significant growth and now has 8.3 million unique visitors a month, with over 3.0 million registered users. Today, it has announced the latest launch of its shopping app, giving an exciting new user experience when browsing and buying from their web site,

using an iPhone, an iPad or the iPod Touch. So ipod is not only a tool to entertain, such as listening music or watch movie on ipod after we have done the transferring:

transfer

music from itunes to ipod or

transfer

ipod music to iphone etc, but also a good helper for us to shopping.

The firm's e-Commerce director, Mr James Hart, said, "After year-on-year growth of over 800 percent in mobile revenue, I'm pleased to release our iPad and iPhone shopping apps. We decided to take a considered approach to releasing these first apps, so that their foundations were rock-solid, thereby allowing us to now develop and improve the experiences."

Above all, apple's ipod apps become more and more, all we have to do is just make best use of the existing apps for us.

Review of 10 products Led by Steve Jobs during his lifetime

It is a shock news for apple fans! Apple today announced that the founder Steve Jobs died. Under the guidance of Steve Jobs, there are a variety of products are considered to have the industry-changing significance. Longitudinal look at the history of Steve Jobs and Apple can see that a product is not independent of each industry, each graphical user interface of Apple insist, insist portable, on-line store model results. Product form is the result of condensation of the design ideas.

The following 10 most important products:

1, Apple I. Apple's first prototype in 1976 listed the need to connect the TV as a monitor.

This is the first major Apple products fortune. There was no

standard sense of the personal computer (PC), and no alliance of Microsoft and Intel, Apple I personal computer is a Mac into a symbol.

2, Apple II. Popularity of Apple's first computer, listed in 1977 until 1993, still selling the product line. It has created a new concept of personal computing.

Apple II equipped with a MOS Technology 1 MHz 6502 microprocessor, 4KB memory and reading programs and data to the tape interface.

3, Apple Lisa. World's first graphical user interface (GUI) and mouse PC. Listed in 1983, Apple put the computer's price marked \$ 9935.

Jobs can be seen as the eldest daughter of Lisa Lisa's name can also be seen as "local integrated software architecture," the abbreviation. Lisa introduced the first computer mouse in which this concept, and for the optimization of the user interface is computer literacy to the home of the biggest improvements.

4, Macintosh, commonly known as the Mac. 1984 release, Mac is the Apple machine was the main product line. Lisa's full use of graphical user interface concepts, so that computing experience more direct.

It is worth mentioning that, Mac machine can run Windows system first, of course, only limited use of intel CPU products.

5, NeXT. Apple's Steve Jobs was fired after he founded NeXT company. NeXT is a graphical interface technology to further breakthroughs.

The world's first Web browser is designed for the NeXT. NeXT operating system is Mac and iOS basis. After the acquisition of NeXT by Apple, Steve Jobs returned to Apple again.

6, iMac. August 1998 release. Jobs returned to Apple after the Mac series of dramatic improvements. iMac to now are still big sellers, iMac G3 to G5, a variety of series to be sought after in the market.

Apple introduced the iMac on the BootCamp program, which allows users to completely rebuild a windows on a computer system. Apple iMac machine is the main product line of desktop

computers.(related to mac:

8, iTunes. Introduced in 2001. After creating the iTunes App Store model. This is the Apple lock the root of all consumers.

First, iTunes is the iPod management software at the computer, but then the iTunes online sale of all essential electronic music. Genuine consumers pay to download music onto the iPod, Apple charges per download, the copyright of this charge.

9, iPhone. In 2007, when Steve Jobs announced the release of the industry that the iPhone is a joke. General a pixel, the camera in general, the processor's full-screen phones usually do? This was only the hardware on the world's mobile phone industry, iPhone, the trend is difficult to see through.

Large-screen, multi-touch for all the brand's flagship. The iPhone App Store to absorb the dependence of all users, 50 million applications in the application store ahead. A variety of popular software released in the App Store success story of the myth of wealth deepened consumers' attachment to the iPhone.

10, iPad. 2010 release. If the iPhone mobile phone manufacturer moved the cheese. iPad move all PC makers' cheese.

iPad off the Tablet PC concept, listed 80 days sold 3 million. Short period of time has introduced tens of millions of sales. U.S. government departments have a staff plan, 500 enterprises have a unified procurement program. Originally consumer products have won enterprise customers the depth of customization.(related to ipad:

Amazon tablet is not the iPad tablet opponents

One is that Amazon released Fire Tablet PC in the evening of the 28th, including four products: a large screen Kindle; two touch-screen Kindle (Wifi and A 3G version); There is this Fire Tablet PC. Fire panel is a bit like China's high-end cottage flat, elegant work, ultra-thin 0.45 inches, the price is also very kind, only 199 U.S. dollars, converted into yuan, the price is comparable to a cottage flat. Therefore, more and more people become worry for apple: Amazon hot!

So, with the second "fire", Amazon's flat to the fire, "Amazon to Apple fire" is the title of many media. In fact, this is not difficult to understand, Apple iPhone5 conference opened on the 4th, and strong in front of the Amazon, the purpose is to grab the front of the fire iPhone5. And just heard the news that Amazon and Hewlett-Packard is negotiating to buy that hot Palm and WebOS system, this message appears in the Amazon jumped to Hewlett-Packard, president on the occasion, is a very imagination of the press, it seems Amazon will fire a while.

Some media use "subsidizing attack Apple" "Apple obliquely" to catch people's eyes.. In my opinion, Amazon is not so much powerful attack rather than helpless defense, for several reasons:

A different target user groups.

7-inch flat-panel and two 9.7-inch iPad, backward on the viewing area has doubled. Therefore, the two user groups are not the same:

7-inch flat-panel more suitable for Asians, women and students.

Therefore, this 7-inch flat-panel and iPad is not much comparable, and the competition can really qualify as significant, to count that money can call Samsung and accounted for no small share of the P1000 and the many domestic 7-inch flat-panel business.

So, my assessment is that the Amazon's biggest rival is the seven-inch flat panel instead of Apple ipad.(extensive reading:

2 different functions

Amazon introduced the product is to sell print, Kindle does not hurt the eyes, the most suitable as a carrier of the book; and Tablet PC's color screen, in addition to books can also be

color-oriented magazine.

The Amazon has introduced four products, including a large screen Kindle, two touch-screen Kindle, there is a tablet. Features four large-screen, touch screen, which shows that the Amazon starting to focus on touch-screen, big-screen reading experience.

Touch screen is easy to flip and input, large screen to display more text, all the changes are still inseparable from the "read" the word.

Amazon Kindle fire as the first flat, despite the use of eight 1G Hz dual-core Cpu, but with the mainstream 64-bit dual-core iPad large gap between multimedia performance is far better than the latter, Fire tablet should be more suitable for reading. Clearly, the introduction of these products just to keep their own e-book market, it simply does not fight back.

3 different price

iPad price is not high from 2000 to 3000 price, cheaper than mainstream laptops. Apple need to do is follow the user to purchase applications from the iPad, video and books, but Amazon requires a more simple, they put Kindle books as the user's shelves and channels, they can only guarantee this, so they are more cost effective , \$ 199, equivalent to 1200 yuan, even in the domestic market, but also quite competitive. Low prices, so that Kindle for more low-end users.

We can expect that Kindle has a flat cheap low price sales policy, will make it in the 7-inch flat-panel market in the popular low-end, high-end market with the Apple iPad all cost-effective due to positioning of different products, but because the two functions different from the price difference, the target users are not the same, and there is not much between the two cross-market, Apple will not have formed the so-called threat.
