Absolutely practical guides for new ipod user

Nowadays, it has become an undeniable fact that when the entire world is in a craze about the iPhone 4 and iPad, Apple's iPod seems to have slipped in popularity. With an iPod, you can conveniently enjoy music and movies on a crowded bus or subway. And you could stuff an iPod into your pocket and take it anywhere with convenience.

However, we often hear some new users complaining about some questions such as how to put music on iPod,
how
to transfer music from ipod to mac etc. Here are some simple steps that will show all you beginners.

Sync iPod To New Computer

This is a totally different case from the first one since here you are planning to move your entire library to another computer or
transfer
ipod to computer. There is a far greater risk of losing your data during transfer, but you can prevent that if you take note of these steps:
1. Connect your iPod to your old PC and wait for iTunes to appear. If not, do it manually by double-clicking on its icon.
2. Under Devices, choose your iPod's Name and open the Summary Tab.
3. Choose Manually Manage Music and Videos. Sounds the same as the first set of instructions, right? Not really. This time you need to do an additional step, which is to enable disk use. Because an iPod uses a disk, you will not have any issues with regards to storing and moving files.
4. A message will appear, which says disabling automatic settings will need unmounting the device before you disconnect.
5. Click OK then Apply.

Get Songs Off iPod Manually
If you want to have more control over your iPod's functions, choose to delete the songs manually. You still need to use your iTunes for this one. Here are the steps:

1. Go to your iTunes window.
2. Click on Options Menu.
3. Check the box before Manually Manage Music.
4. Press OK.
5. Proceed to Devices on the left side of the screen.
6. Click on the arrow besides the iPod's name to list down
all your songs.
7. Choose the songs you want to remove, right click, and
press delete.
