Have you ever thought about you will be a director or leader in the movie atmosphere? Do you want to make your own videos or movies by yourself? Yes, we do. I believe most of people maybe have this feeling. With today's advanced technology, we can realize our dream easily and economically.

Blu-ray

(not Blue-ray) also known as Blu-ray Disc (BD), is the name of a next-generation optical disc format jointly developed by the Blu-ray Disc Association (BDA), a group of the world's leading consumer electronics, personal computer and media manufacturers (including Apple, Dell, Hitachi, HP, JVC, LG, Mitsubishi, Panasonic, Pioneer, Philips, Samsung, Sharp, Sony, TDK and Thomson). The format was developed to enable recording, rewriting and playback of high-definition video (HD), as well as storing large amounts of data.

The format offers more than five times the storage capacity of traditional

DVDs and can hold up to 25GB on a single-layer disc and 50GB on a dual-layer disc. This extra capacity combined with the use of advanced video and audio codecs will offer consumers an unprecedented HD experience. Additionally, for the convenience of numerous software users from all over the world, this software provides the selection of any Blu-ray/DVD movie's chapter, audio track and forced subtitle for conversion. That is to say we can make our own blu-ray movies by ourselves to some extent.

This year is a busy year for smartphone market. As one of the most competitive ones, blu ray movie becomes first choice for movie fans who would like to enjoy Blu-ray/DVD discs on a bigger screen. Directly watching movies on blu-ray disk is remarkable, although difficult it is. Now it is a good choice for us to choose an advanced software to help us to decode Blu-ray to some portable devices in an easiest and fastest way.

With

blu ray ripper

, we can rip, burn, copy or backup as the way we like and then we can

put it on some portable devices such as iphone ,ipod ,zune, psp etc. So it can meet our various needs. Moreover, we can take an active part in the movie or a fragment personally

, it's seemed

that we are the directors as well as the participants in a way. So it can help people who are keen on making movies especially blu-ray movies realize a small dream, because of this, more and more people are pursuing this great fashion.

This new

version is upgraded by adding several smartphone profiles, like HTC EVO MPEGE 4. So from now on, it is not a headache task for HTC EVO 4G owners to put and play their collection of

Blu-

ray/DVD discs on this

smartphone for the sake of seeing HD movies anywhere and anytime.

Due to this conversion, what we should do is to load

Blu-

ray video and choose HTC

EVO 4G MPEGE 4 as the output video file, and then edit it. Once

this conversion is completed, it is the time to enjoy with our

family and friends. It is said that we can also through other

ways to play and watch our own movies, through what? I have

thought about it for days, but of no results. "It is so easy to to

watch blu-ray video on iphone if we download blu ray to iphone,

it can allow you to convert or rip your movies or videos to your

iphone conveniently." A friend told me. This

program is recognized and welcomed worldwide

also because of its distinguished features, like its high quality

of out video and audio file, well support of forced subtitles and

its self-owned editing functions. With its advanced adoption of

technology, high synchronization of output video and audio is

guaranteed. Furthermore, this software enable users have the

ability of editing original video files, like "Crop",

"Trim", "Watermark with image or video" and "Audio

Replace".

Yeah, through

the professional tool, HD movies on the trip, on the road even on

the bed. How wonderful it is! Just go for it!

Thinking over

this, anything is possible, what we need is to just have a try,  
don't be afraid or hesitant to get what we want. Let's become the  
leader of our beautiful lives.

According to the Financial Times, Google intends to launch a pay per view YouTube movie service before the end of the year. It seems that Google have been in talks with a range of

Hollywood

movie studios for a couple of months.

And the plan is to launch a world-wide service in 2010.

YouTube

is a video-sharing site on which users can upload, share, and view videos. Three former paypal employees created YouTube in February 2005. In November 2006, YouTube, LLC was bought by

G

oogle  
Inc.

for \$1.65 billion, and is now operated as a subsidiary of Google. The company is based in

San  
Bruno, California

, and uses

Adobe  
Flash Video

technology to display a wide variety  
of

user-generated

video content, including movie

cli

ps

, TV clips, and music videos, as well  
as amateur content such as

video  
blogging

and short original videos. Most of  
the content on YouTube has been uploaded by individuals,  
although media corporations including

CBS

,

BBC

,

VEVO

and other organizations offer some of their material via the site, as part of the YouTube partnership program.

Now, YouTube is expanding into the movie business and offering web surfers free access to full-length films from major studios like MGM, Sony Pictures and Lionsgate. We can get approach to youtube now at [YouTube.com/movies](https://www.youtube.com/movies) easily. Of course if you want to watch your youtube video or movie on your iphone or ipod in order to watch it freely and timely, you can use a youtube downloader to help you

download youtube

videos and then play it.

More

surprises for us is that about 400 films are currently available in categories like animation, documentary, horror, drama, action, Hollywood, comedy and drama. And also there are advertisements preceding the films, which are presented in a standard YouTube window that will be familiar to viewers. Ratings and warnings about drug use or violence in the films also appear before the stream begins. Some more recent films, like *Crouching Tiger, Hidden Dragon*, are also becoming available as deals with studios are finalized. A statement from YouTube executive Donagh O'Malley also hints that full-length television shows could also become available.

YouTube is said to be launching a full-blown movie rental service by the end of the year. The new service would stream movies from major Hollywood studios and would leverage Google's might in search and online videos.

Come

across a soundtrack on YouTube you really liked and want a quick and convenient way to transfer it to your MP3 player? Are you confused about how to choose a powerful and easy-to-use converter among so many converters on the Internet? Here we recommend you an excellent software.

Cucusoft

youtube mate is just what you need. This smart

YouTube to

MP3

converter

can download and convert any YouTube Flash FLV video to various audio types (MP3, WAV, MP2) compatible with your MP3 player in one quick and easy step.

Step 1.

First, you

need to click

"Download" button and type YouTube URL in the address bar.

Step 2.

Click

"Profile" and choose MP3 as output format.

Click "...". and select output folder as what you want.

Step 3.

Click "

Convert" to start downloading YouTube to

MP3

Now we

have done all the prepared job, it's time we enjoyed youtube

videos on mp3 !

The iPod is a combination portable digital media player and hard drive from Apple Computer. The original version was about the size of a deck of playing cards, with a monochrome screen and a 5 gigabyte capacity. iPods can be now be purchased with up to 60 GB of hard drive capacity and color screens capable of playing television shows, videos or movies uploaded from a PC.

An iPod can be connected to a computer with either a FireWire or USB port, with many of the latest versions depending upon USB 2.0. iPods have a reputation for being user-friendly. Users navigate with what Apple calls a "touch wheel," a centrally-placed circular disk designed for one-hand operation. Popular iPod features include a calendar, address book, to-do list, alarm clock with sleep timer, games and text reader. A large variety of peripherals exist for the iPod beyond its iconic white ear buds, including modules that allow songs to be broadcast on radio frequencies, docks for digital cameras, digital voice recorders and docking stations that are integrated with stereo systems, powered speakers or even automobile entertainment systems.

While the iPod was originally platform dependent, after July 2004 iPods (and Apple's iTunes software, included with each unit) worked on either Windows or Mac. iTunes makes it possible to load an entire CD onto an iPod in as little as ten seconds, organize thousands of songs into favorite playlists, purchase songs, albums, videos and movies from the online store and subscribe to podcasts.

The iPod supports most audio file formats including MP3, WAV, and AAC. As of October 2006, the iPod was the world's most popular portable digital media player, with more than 60 million units sold worldwide.

This article aims to guide you how to transfer DVD to iPod with Cucusoft DVD

to iPod Converter, which support almost all kinds of DVD to iPod formats.

#### Step 1:

Free download

Cucusoft DVD to iPod Converter via the link below and run it.

#### Step 2:

Click the second icon to select "DVD to iPod", then load your DVD by clicking "Open DVD" button or choosing "Open DVD" from "File" drop down menu.

#### Tip:

As usual, the longest title is the main file of the movie. You can remove the title you don't like to convert by unchecking the title. Set "Subtitle", "Audio Languages" to what you like.

#### Step 3.

Choose the path where you want to save your video files from "Output Folder". When settings done, click "Converter" to convert DVD to iPod.

#### Step 4.

Run iTunes and drag the converted files to iTunes library, then click "File -> Update iPod". Now, you can enjoy the movies on your iPod anywhere and anytime.

As you see, So easy to convert DVD to iPod formats and transfer DVD to iPod! Free download and have a

try now! More information if want to learn, please feel free to  
consult our  
dvd to ipod review  
center.

Do you want to put all your favorite songs or movies into a spine-tingling party DVDS, and then to enjoy a passion music time. Do you want to dance with the beautiful songs being played on dvd?

Burned personal cd-roms music, is always used for the ideal driving experience, go exercise, or just relax in a day after work moderate physical and mental fatigue. Use decribed above functions, in your CD add perfect DJ sound. Duplicating your precious CD collection to your computer, and can by connecting a larger online databases, immediately enter your music library to add the songs of information.

Family members regardless of men and women, old and young, all can like professionals that burn glaring cd-roms, DVD and blu-ray disc. Easy copying, transformation format, recording, edit, broadcast, backup and share your music, photos and video file data

Playing HD DVD discs on a  
computer

DVD Maker is the

dvd burning

software that help you convert all popular video formats to DVD  
and burn DVD movie played on portable and home DVD players.

This provides everything

you'd expect from a high-definition player costing well over,  
including support for the BD-Live extras included on some of the  
latest discs. And, unlike some players, it's easy to use: simply  
pop a disc in your computer's hard drive, open and click to play -  
that's it. If you're a movie fan, you'll find that

DVD burning  
software

includes all the features

you could want. As well as support for high-quality audio, you'll  
find full options available for subtitles, multiple audio tracks  
and pop-up menus that give you access to commentaries and special  
features throughout the film.

Create picture-in-picture  
effects in HD movies

Watching movies is only

half the fun, though, as dvd burning software makes it simple to  
make your own dvd to play

cd-roms music and at the same time we can

also enjoy the vivid pictures on dvd.

It can import video from a

camcorder and break it into chapters automatically, so you simply  
drag-and-drop them into place and add transitions and titles. But

it also makes advanced video effects easier. Working with  
high-definition videos used to be a chore, with every change taking  
a long time to 'render' before you could preview it. DVD burning  
software makes things quicker and easier with a new background  
rendering option that lets your computer get on with this invisibly  
and without fuss and we don't have to worry about

how  
to burn a dvd with a high quality.

Convert video and  
transfer it to an Apple or Android device

Today many of us own a portable device that can play video files: an iPod, perhaps, or MP3 player or mobile phone. The dvd burning software makes transferring files to just about any portable device quick and easy: it can analyse the files already on the device to find out what type they are, and once that's done you simply drag-and-drop files to add them.

With these convenient resources, we can enjoy the music , movies and dance with the songs . It is high time we relaxed to rock up music and movie.

Started as a website for people to upload user-generated video content, YouTube has become the portal for all Web videos.

YouTube is a video-sharing site on which users can upload, share, and view videos. Three former paypal employees created YouTube in February 2005.

Youtube downloader allows users to download youtube videos from Facebook, Dailymotion, Megavideo, Metacafe, Vimeo, Photobucket, Break, etc., and convert them to MP3 or AVI. It is an all-in-one free video downloader and converter. Through this , we can watch various videos on youtube conveniently and economically. Of course, we can also transfer youtube to mp3 if we want to watch youtube flash videos conveniently.

From viral clips to music videos, YouTube generates a ton of Web traffic and has helped to create virtual and actual celebrities. We have compiled a list of the 5 most-popular videos in YouTube history based strictly on video views.

No. 1: "Baby" by Justin Bieber  
(

**Justin Bieber's 'Baby' Has Been Viewed Nearly 376 Million Times)**

Perhaps nobody in the digital music era embodies the possibilities of YouTube better than Canadian-born teen idol Justin Bieber.

A music industry manager stumbled upon

Bieber's YouTube channel, arranged a meeting with Usher, and the rest is pop culture history. Bieber is a global superstar.

However, the teen idol was quite popular on YouTube long before the world heard "One Less Lonely Girl."

No. 2 -- "Bad Romance" by Lady

Gaga(Lady Gaga's 'Bad Romance' Has Been Viewed More Than 301 Million Times)

Do you know who Stefani Joanne Angelina

Germanotta is? She has several popular YouTube videos. She's Lady Gaga. The music video for

"Bad Romance," which was the first single from Lady Gaga's second album,

"The Fame Monster," has been viewed more than 301 million times on YouTube. While the video has enjoyed popular success, it was also widely heralded for its artistic innovation.

No. 3 -- "Charlie Bit My Finger -- Again!" by HDCYT(

Charlie Bit My Finger - Again! Has Been Viewed More Than 245 Million Times)

While most of the clips on this list are music videos, the heart and soul of YouTube has always been its ability to turn ordinary moments into viral video magic.

Take the video at No. 3 all-time,

"Charlie Bit My Finger - Again!," a clip featuring brothers Harry Davies-Carr and Charlie Davies-Carr. The 3-year-old Harry sticks his finger in the mouth of 1-year-old Charlie, and Charlie bites.

No. 4 -- "Waka Waka (This Time for Africa)" by Shakira

(Shakira's World Cup Anthem Viewed Nearly 228 Million Times)

Spain

might have won the 2010 FIFA World Cup on the pitch, but Colombian singer Shakira provided its soundtrack.

Her song "Waka Waka (This Time for Africa)," performed as a collaboration with South African group Freshly ground, was chosen as the official song of the 2010 tournament -- and its YouTube video quickly climbed the site's all-time charts.

With nearly 228 million views, "Waka Waka" is the fourth-most viewed video of all time on YouTube.

No. 5 -- "Love The Way You Lie" by Eminem and Rihanna (Eminem, Rihanna Duet Has Been Viewed More Than 187 Million Times)

If we told you that a duet between Marshall Mathers and Robyn Fenty was real and very popular online, would you believe us? You should, because Eminem and Rihanna's video for "Love The Way You Lie" is the fifth-most watched YouTube video of all time. It has been watched more than 187 million times, and it marks Eminem's second appearance in this YouTube Top 5 list.

Now we have collected the top five youtube video online, let's hit them tog

Research In Motion  
Ltd, the maker of the BlackBerry smartphone,  
said it will begin

selling a tablet  
computer in North America in the first quarter  
for "under" \$500 as it takes on Apple Inc.'s  
iPad.

As we know the  
iPad is a tablet computer designed  
and developed by Apple. It is particularly marketed  
as a platform for audio and visual media such as  
books, periodicals, movies, music, and games, as  
well as web content. If we want to transfer copy  
and transfer files from iPad and other portable  
devices such as iPod, iPhone to computer without  
iTunes, backup files on your hard disk easily, then  
we can choose an

ipad to computer

transfer for us. Apple, based in Cupertino, California, increased its market share in tablet computers to 95 percent in the third quarter, according to Strategy Analytics. Global tablet sales rose 26 percent from the previous period to 4.4 million units, with Apple selling 4.19 million iPads, the researcher said last week.

Given that, RIM can't  
await their doom. So the rumuor spreads that RIM  
will be launching its own tablet computer in the  
near future that can provide the similar function  
for ipad users to

copy music from ipad to  
computer

. And through leaks and speculation, many commentators have identified its probable characteristics: 7-inch touch screen, Marvell based ARM chip (likely the same one powering the Torch), running the QNX operating system (not BlackBerry OS 6), Wi-Fi but no 3G radio (works on 3G by tethering to a BlackBerry device).

It seems that everyone is comparing the BlackPad with the iPad and saying the BlackPad won't be competitive. This is not a valid assumption. I don't expect the BlackPad (or whatever it's finally called) to compete directly with iPads and Android tablets in the general consumer space. RIM is savvier than that and has done its homework. Its primary target is business users. So will there be some challenges for RIM in the market? Sure. But it won't be the disaster that many predict. I expect it to be successful in the rather large niche it

is targeting.

There is rumour saying that the BlackPad will run a QNX OS and not the newly released BlackBerry OS 6. There are two key issues with that approach. First, does it tie into the BES/BB infrastructure so companies can make sure they are compatible with existing BlackBerry installations for deployment, management, security, etc.? And does BlackPad have the needed business apps, or is it targeted at the consumer space?

Many commentators have indicated that running the QNX OS means there will be few apps available for the device. This is not an accurate assumption. I expect many applications to be available for the device from day one, as it is highly likely it will include a Java Virtual Machine, WebKit browser. It may even include VoIP (making it compatible with MVS) and video conferencing. So BlackPad will likely come to market with loads of potential apps and be largely BlackBerry -apps-compatible as well.

RIM may sell the Playbook through retail stores of Target Corp. and Best Buy Co. in the U.S. as well through carriers, Balsillie said.

### Smartphone

and electronics warranty provider SquareTrade recently shared its smartphone data in a report comparing the iPhone 4 with other mobile devices. In the study ,there were four months of data on the iPhone 4, eight months of data on Motorola and HTC Android devices, and one year of RIM BlackBerry data. The iPhone 4 led the group in reliability, with only 2.1 percent projected to have a non-accident malfunction in the first year of ownership.

### SquareTrade

estimates that the iPhone 4's malfunction rate over a 12-month span was just 2.1%,

### the iPhone 4

is currently outperforming almost every other smartphone in terms of user satisfaction. So, despite all of the bad press the iPhone 4 has been getting, it looks like Apple fans and will always be Apple fans to play with iphone, and they can still enjoy dvd or video on iphone 4 easily through a

dvd to iphone 4 converter

, as long as  
with this powerful tool, we can play it at any time and any  
place. If we are using a mac system , we can also to convert  
dvd to iphone 4 with

dvd to  
iphone 4 mac

, all in  
all, we can get the most from them.

Android  
device makers Motorola and HTC were not far behind, with 2.3%  
and 3.7% malfunction rates in the first year respectively.  
Other smartphone makers were less reliable, with some 6.3% of  
Blackberry devices failing in the first 12 months, along with  
a 6.7% failure rate for other smartphones, the SquareTrade  
report said. The study also found that over 75% of  
smartphones experience a failure due to accidental damage.  
Blackberry devices had the lowest first-year accident rate,  
at 6.7%, while the iPhone 4 had the highest, at 9.4%. Its  
predecessor, the iPhone 3GS had the lowest overall failure  
rate, at 11.7% over the course of a year, with the highest

failure rate at 16.9%, the study found.

While the November 2010 study found that the iPhone is the most trustworthy phone, it also showed Android-based Motorola and HTC devices to be pretty comparable in terms of dependability. The study said that the reported rates can only reflect across-the-board improvements in hardware that hasn't been proved in the long run. American gadget insurer SquareTrade released figures yesterday showing that of all the smartphones on the market, the iPhone 4 was the most likely to get broken accidentally, with a staggering 13.8% accidental damage rate compared with only 6.7% for Blackberry phones.

These figures need some time to test, there maybe the tendency that the iPhone 4 is easier to drop or that it's more likely to break if you do drop it - which makes sense when you consider its glass construction - or combination of the two. On the positive side for Apple, the iPhone4 is reported as the least likely to breakdown with a 12 month failure rate of 2.1% compared with 6.3% for Blackberry. The data from SquareTrade also suggested that despite being among the most complex devices available, smartphones are less likely to break down than any other type of gadget except for digital cameras.

Above all, we can draw a rough conclusion that the iPhone 4 is the most reliable phone in the study, but also has the highest risk of accidental

damage. Blackberrys had the least risk of accidental damage, and may be the best choice for the clumsiest consumers, but had a relatively high malfunction rate.

## Smartphone

and electronics warranty provider SquareTrade recently shared its smartphone data in a report comparing the iPhone 4 with other mobile devices. In the study ,there were four months of data on the iPhone 4, eight months of data on Motorola and HTC Android devices, and one year of RIM BlackBerry data. The iPhone 4 led the group in reliability, with only 2.1 percent projected to have a non-accident malfunction in the first year of ownership.

SquareTrade

estimates that the iPhone 4's malfunction rate over a 12-month span was just 2.1%,

the iPhone 4

is currently outperforming almost every other smartphone in terms of user satisfaction. So, despite all of the bad press the iPhone 4 has been getting, it looks like Apple fans and will always be Apple fans to play with iPhone, and they can still enjoy DVD or video on iPhone 4 easily through a

DVD to iPhone 4 converter

, as long as

with this powerful tool, we can play it at any time and any place. If we are using a Mac system, we can also convert DVD to iPhone 4 with

DVD to  
iPhone 4 Mac

, all in

all, we can get the most from them.

Android

device makers Motorola and HTC were not far behind, with 2.3% and 3.7% malfunction rates in the first year respectively.

Other smartphone makers were less reliable, with some 6.3% of Blackberry devices failing in the first 12 months, along with a 6.7% failure rate for other smartphones, the SquareTrade report said. The study also found that over 75% of smartphones experience a failure due to accidental damage. Blackberry devices had the lowest first-year accident rate, at 6.7%, while the iPhone 4 had the highest, at 9.4%. Its predecessor, the iPhone 3GS had the lowest overall failure rate, at 11.7% over the course of a year, with the highest failure rate at 16.9%, the study found.

While the

November 2010 study found that the iPhone is the most trustworthy phone, it also showed Android-based Motorola and HTC devices to be pretty comparable in terms of dependability. The study said that the reported rates can only reflect across-the-board improvements in hardware that hasn't been proved in the long run. American gadget insurer SquareTrade released figures yesterday showing that of all the smartphones on the market, the iPhone 4 was the most likely to get broken accidentally, with a staggering 13.8% accidental damage rate compared with only 6.7% for Blackberry phones.

These

figures need some time to test, there may be the tendency that the iPhone 4 is easier to drop or that it's more likely to break if you do drop it - which makes sense when you consider its glass construction - or combination of the two. On the positive side for Apple, the iPhone4 is reported as the least likely to breakdown with a 12 month failure rate of 2.1%

compared with 6.3% for Blackberry. The data from SquareTrade also suggested that despite being among the most complex devices available, smartphones are less likely to break down than any other type of gadget except for digital cameras.

Above all, we can draw a rough conclusion that the iPhone 4 is the most reliable phone in the study, but also has the highest risk of accidental damage. Blackberrys had the least risk of accidental damage, and may be the best choice for the clumsiest consumers, but had a relatively high malfunction rate.
