You can't browse the tech section of Google News for more than a few minutes without coming upon an article about some new tablet. Whether it runs on Android, Windows 7, webOS or iOS, it has a legion of dedicated fans jumping at the bit any leaked news, no matter how petty. When you look at all the hype surrounding a product like the iPad 2, it is easy to forget how young tablets are as a device category.

Which is why the success- or failure, of the iPad 2 is so crucial for this emerging market. Analysts already expect tablets to be a 35 billion dollar market by 2012. A third of those sales are expected to cannibalize from sales of netbooks and notebooks.

Are tablets destined for the same road?

The

best answer to this question is...maybe. Tablets have a few things going for them. For one, they're much more focused devices. A tablet won't do all the things a netbook can do, but it does what it does quickly and efficiently. Mobile operating systems draw less power and accomplish a limited set of tasks with more speed.

Your iPad won't run Photoshop, but it'll boot up and have you in your email while your desktop is still powering on.

But on the other hand, tablets still represent a compromise. Power for convenience. Ease of transport for ease-of-typing. Full HD video for more comfortable, 720p video. So far, consumers seem eager to make those compromises. But the night is young.

How the iPad 2 Can Keep the Pressure Up:

The continued momentum of the tablet market will hang entirely upon the iPad 2. Apple has a few things they must deliver on.

1. Multimedia: The iPad 2 must be able to handle 1080p video with no starts, stutters or jitters. The Xoom is more than capable of this, so I don't anticipate the iPad 2 falling short. But the iPad 2 will also need to deliver superior connectivity- either through Verizon's 3G network or, ideally, LTE. Streaming media is a key part of the tablet's attraction.

2. Cost. The Xoom may have made a major miscalculation here. Tablets are much less attractive when they compare in cost to a high-end laptop. If the iPad 2 wants to maintain its momentum, that \$499 price-point is utterly critical.

3.

Longevity. Laptops don't get long battery life unless you spend a lot of money, or go for something like a netbook with vastly reduced functionality. The iPad's 10 hour battery was a big part of its 'wow' factor. Expect the iPad 2 to improve on this.

Downloading

ipad

movies can sound too good to be true at first and with so

many site's that try to sneak spyware and other such bad viruses, we must be careful when deciding if we want to sign up for a site that offer's us the ability to download iPad movies.

Even

though there are many iPad movies download sites available but most of them are in reality P2P or file sharing sites. Not safe to download movies to iPad. They often have many different movie files for each movie, Want to know why? Because they let anyone and everyone immediately add their movie files to the database and of course there are always plenty of bad guys that can't wait to slip a virus into their movie file. So anybody that downloads the particular movie will catch a virus or some sort of spyware to gadget or computer.

Where

To Download iPad Movies:

There

are many places on the net were one can find iPad movies to download. Thankfully there is a safe way and cheap alternative to download unlimited iPad movies - without worrying about trojan horses, adware, spyware or any other bugs and viruses. Its called the "Download iPad Movies"- and it come's very highly recommended and highly considered among many iPad owner's.

Like

everybody I get stressed out because of my inability to play movies I purchased as a DVD on portable media players, computers without DVD drives, etc. I'm an open source nut so I don't want to pay for \$50 software that doesn't work that great. Luckily I found out how to rip DVDs to many popular formats using my favorite media player, VLC, and I'm here to show you how.

1.Load

up the DVD you want to rip and start up VLC. Then under Media click on Convert / Save.

2.The Open Media window will

appear and you want to click on the Disc tab. Check DVD, make sure the disc device field points to the optical drive with the dvd, and hit Convert/Save. You can select the start position by selecting the title and only record a specific chapter on the DVD. You can also skip the DVD Menus as you will not be able to use them in the ripped file.

3.Next the Convert screen

opens where you will want to select a location for the ripped file.

4.While you are browsing to

the location to put the ripped file make sure to give it a name and a supported extension. For this example we ripped Lord of the Rings and gave it a MOV extension. If you don't label it with a supported file extension it will default to .ps (Program Stream) file.

5.When everything is set up

the Convert screen will look something like this where we have the source drive and destination file with appropriate extension.

6.While the DVD is being ripped you will see a progress count in the main UI. The amount of time it takes will depend on the file format and size of the DVD but it will take a while no matter what.

7.You should be able to play the converted file with other media players assuming you have the right codec. Of course will notice the conversion results in lower quality compared to the original.

Tip:Here is another method on how to rip dvds.

Looking

for the Best iPad 2 Apps? Below is Top 5 Best iPad 2 Apps list for you to find the Best Apps for your iPad 2.

1.Angry

Birds HD

Angry

Birds originally came out for the iPhone and it was one of the best game. Chillingo has brought it to the iPad as in HD, it is awesome with the larger screen canvas and better graphic. The little green pigs stole the birds' eggs, so in this game you will revenge for the birds. Launch different set of angry birds by

using trajectory in order to destroy their strongholds and the pigs. There are about 100+ levels in this game, you can get it at iTunes for \$4.99.

2.Plants

Vs Zombies HD

Protect

your home from aggressive zombies invasion by using your plants! It's just like other tower defense games but this game is more eye candy and attractive, furthermore it is in high definition (HD) which makes it looks beautiful. By having this game on your iPad, you can collect five different pick-ups with each of your fingers since iPad can accept several inputs at one-time rather than play it on PC or Mac, just with a single mouse click at once. This making your planting job easier as you can perform multitask job. However Plants Vs Zombies HD iPad app game will cost you \$9.99 at iTunes.

3.Fruit

Ninja HD

It

is simple and addictive game, Fruit Ninja was one of highly addictive game for the iPhone and iPod Touch. This game become more attractive with the larger screen of an iPad. There's multiplayer (2 players) mode where you can play head-to-head with your friends. In this game you can use 8 fingers across the screen at one time to slice the fruits. It will cost you \$4.99 to get it at iTunes for you to become a ninja warrior.

4.Bloomberg

For

those who are interested in finance, business and stock market, Bloomberg iPad app has it all. The app lets you read the latest financial news headlines, world market updates and stock quotes, charts and news. The app also includes with customizable charting, currency exchanges (life tracking), stock info, Bloomberg podcasts to download, multiple real-time indexes and

even access to Bloomberg News. The app is free to download at iTunes as a trusted source for financial information to your iPad.

5.Doodle

Jump

Another

great and insanely addictive iPad app game as described, Doodle Jump for iPad. This game was a big hit on iPhone and with the larger screen of the iPad, the game is become better. This game is pretty easy to play, just tilt your iPad to move left or right to make your Doodler jump from platform to another platform and tap the screen to shoot down the enemy, the game has no end, what you need is just to beat your/other people's high score. In this game you also can catch a ride with Jet Packs, Propeller Hats and springs to fly you higher. Thus your score can be submitted to Twitter or Facebook as well. There are also different themes available for you to feel different experience.

When Apple announced the iPad, I immediately imagined that it would be a superior way to read PDF books in a tablet-style format. On the Apple iPad Specs page, there is a single mention of PDF support for the iPad - in the Mail application as an attachment. However, there must be a way to view PDF files on the iPad natively, right? Let's walk through two main ways currently available to view PDF files on the iPad.

1.

First you need

Calibre

-

a free and open source eBook management application. (converts PDF to epub)

2.

Download and install Calibre (This application is compatible with Windows, Mac OS X, or Linux.)

3.

Run Calibre application and you need to choose a location for your books and choose your book reader. (choose Default if you don't understand)

4.

Launch the interface of Calibre.

5.

Click Add books button on the top left

6.

Click Convert E-books

7.

Choose EPUB as output format and click OK, it will convert.

8.

Now Connect your iPad and launch iTunes.

9.

click File >> Add to Library.

10.

Select the epub you created by the application mentioned above. (The epub file will appear in the iTunes)

11.

Select the books you want to sync to the iPad, click Sync button.

12.

Launch iBooks on iPad, and happily enjoy reading ebooks.

Last year was iPad's reign
where Apple managed to create a market for tablet pcs out of
nowhere and dominate it with the iPad. Will this domination
change in 2011? Are Android 3.0 tablets ready to get the crown
from Apple? We believe that it's too early to answer these
questions securely.

To begin with, we have not yet
seen an android 3.0 tablet in the market, what we have seen so
far is videos demonstrating the features of Honeycomb and nothing
else. Yes, both Honeycomb and some of the tables look great and
promising but it's really too early to tell if the consumers will
forget their first love and move to android for their tablet PC
needs.

On the other hand, Apple
managed to keep their cards hidden and we do not know how many
aces they have on their sleeve for the next version of iPad.
During the days of CES 2011 they kept quiet leaving Android fans
enjoy their 5 days of glory.

So, where does the tablet market

heading, to Apple or Google?

The only way to predict the

future of the tablet market is to base our assumptions on facts:

1. One Device VS a lot of devices

The iPad is only one device

while Android 3.0 will run on a number of devices from trusted hardware manufacturers such as Motorola, Asus, Lenovo, Toshiba and many more. This fact alone creates an advantage for Android 3.0 which can satisfy the taste of a wide variety of users both in hardware specs (7 inch - 10 inch) but also price.

2. Tablet Software

The Apple app store has

300,000+ applications ready to run on the iPad while the Android market is still behind especially when we talk about applications for Android 3.0 tablets. The majority of the Android market apps are for phones only and it will take some time for developers to optimize their applications for Android 3.0 and tablet usage.

During that period is the time that Apple has to go a step further otherwise the Android market will catch up and once it does it will be too late for Apple to make a move.

3. Market domination

Recent history suggests that no company owns a market. If we go a year or so backwards we will find the iPhone dominating the smartphone market and Android scoring less than 10% share. One year later Android stole the pole position from Apple and there is still room for expanding this further.

4. Customer loyalty

Apple has loyal customers. It is a fact that everything that Apple produces sells millions from the first days and the majority of Apple users do not betray Apple for other products. Nobody though can be certain that this will continue for tablets. Google seems to be very serious about the future of Android and when the big search giant wants something it has all the means and resources to get it.

Adobe Flash is a multimedia platform, found throughout the Web, for displaying video, graphics and sound. At times, your Mac computer may not recognize Flash, preventing you from seeing a video. This could be due to a corrupt file or the result of an update that did not take Flash into account. There are several ways to resolve the issue.

â²Update your Flash Player

1.Launch a browser and go to the Adobe Flash Player website (see Resources).

2.Click the "Download now" button. Click the radio button next to "Save File" and then click the "OK" button. Click on the "install_flash_player_osx_ub.dmg" file that is found on your desktop.

3.Wait until a window with a Flash Player icon

appears and click on it. Put a check mark in the box confirming that you have read the license agreement. Hit the "Install" button and type in your administrator user name and password. Click the "Done" button when the process is complete.

â²Enable Flash Firefox

1.Launch your Firefox browser. Click "Tools" in the main menu bar. Scroll down and click "Add-ons," and then click "Plugins."

2.Scroll down and select the Flash plugin.

3.Click the "Enable" button and restart your browser.

In
this article, we will introduce how to play AVI on iPad/iPad 2 on
Windows. Before we move on to how to
convert
avi to ipad on Windows, we need to know what kind of video
can be played on iPad.

-
H.264 video up to 720p, 30 frames per second, Main Profile level
3.1 with AAC-LC audio up to 160 Kbps per channel, 48kHz, stereo
audio in .m4v,
.mp4, and
.mov file formats;

-
MPEG-4 video, up to 2.5 Mbps, 640 by 480 pixels, 30 frames per
second, Simple Profile with AAC-LC audio up to 160 Kbps, 48kHz,
stereo audio in .m4v, .mp4, and .mov file formats;

-
Motion JPEG (M-JPEG) up to 35 Mbps, 1280 by 720 pixels, 30 frames
per second, audio in ulaw, PCM stereo audio in .avi file
format.

Generally
speaking, iPad/iPad 2 supports M4V, MP4, MOV and some kind of AVI
file format. So, to play unsupported AVI file on iPad/iPad 2, we

are required to convert AVI to MP4 for iPad to make it compatible with iPad. The software we need is best iPad video converter.

A recent bit of photography from the White House's Flickr account released a fact that most of us probably weren't aware of-Barack Obama favors the iPad 2 as a computing platform.

The most powerful man in the world is already well-known for his love of technology, and his affection for RIM's Blackberry. However, when it comes to tablet computers Obama is definitely on-board, but his hardware of choice carries an Apple badge.

An image of Obama walking to Marine One after a town hall meeting in Fairless Hills, Pa from earlier this month, clearly shows an iPad under his arm. More specifically it is an iPad 2 with grey Smart Cover attached.

One of Obama's complaints about the Blackberry after he became president was that security meant it was pretty much locked down. With an iPad 2 he should have a lot more freedom due to all the apps he can

download.

While we are sure he uses it to view official documents and make notes, there's bound to be a few games on there that even if he doesn't play his daughters do. One question we'd like to ask him is if he uses it to search the web, and if he does, is the lack of Flash support a pain or a pleasure? There is also the matter of whether he has played

Angry Birds

or not? He must have, right?

Your new iPad 2 might not be as full-featured (or as complicated) as a laptop or desktop PC, but a few neat tricks are still hidden between the surface. Read on to learn how to secure your iPad, sync your bookmarks, and more.

1. Make your passcode more complicated:

iOS defaults to a four-number passcode, but you can turn it off by going to Settings, General, Passcode Lock, Simple Passcode. Now you can use any full keyboard password to lock the iPad. The password also helps to encrypt your mail and attachments on the iPad, so you probably want to make it safer than a four-digit number.

2. Sync your bookmarks:

You can use iTunes to sync your iPad's Safari bookmarks with your PC's Web browser. Open the iPad tab in iTunes, click the Info tab, scroll down to the Other heading, check Sync bookmarks with, and choose your preferred browser.

3. Know your Web links:

You can check a linked word's actual destination URL by touching and holding down on the link--it's a perfect way to sniff out phishy links.

4. Choose an app for e-mail attachments:

You can open a file attached to an e-mail message by tapping the attachment in Mail, but if the default app isn't the one you want to use, you can press and hold and wait for a menu that lets you select an app.

5. Use the iPad as a picture frame:

Not for physical photographs, silly. You can press the Picture icon in the lower-right corner of the Lock screen to have the iPad display its available photos.

6.Share podcasts with friends:

Listening to a podcast that you think a friend would like? You can share the link while you're listening to it by pressing the Email button while it's open.

7.Don't forget your downloads:

You can immediately see if your iTunes account is due for any incoming downloads by opening iTunes on your PC, clicking the Store menu, and selecting Check for available downloads. This trick can come in handy if your download process is interrupted, or if you missed some bonus iTunes content that came with an album you purchased.

8.Forget Wi-Fi networks:

So you accidentally connected to a network once, and your iPad remembers it for life--whether you like it or not. On your iPad, go to Settings, Wi-Fi, and find the network under the 'Choose a Network' heading. Tap the blue arrow next to the network you want to remove, and tap the button on the top that says Forget this Network.

9.Change your e-mail signature:

Don't be one of those people who leave the default 'Sent from my iPad' signature on all their messages. Change it in Settings, Mail, Contacts, Calendars, Signature to...well, anything but that.

10.Use the Side Switch:

You can use that neat switch on the side either to enable and disable audio alerts (this doesn't affect video/audio playback) or to lock the screen's orientation in portrait or landscape mode. You can toggle which function is assigned to the side switch by opening Settings from the Home screen, selecting General, and choosing the function you want under the 'Use Side Switch to' heading.

This post will walk you through ripping your 1080p Blu-ray discs (the ones you own, of course) and then convert the video into a more manageable file size for watching on your iPad or iPad 2. Probably some buddy would say that the big selling point of Bluray is full HD resolution which cannot be done on the iPad, however, this is not the point. The key here is "convenience", cause after ripping Blu-ray to iPad, you could enjoy movie on your iPad or iPad 2 any where and any time, that's impossible to hold a TV and Blu-ray player here and there just for watching Blu-ray HD movies.

In addition, Apple iPad or iPad 2 are part of a device category between a smartphone and a laptop computer. A beautiful high-resolution display makes iPad/iPad 2 perfect for watching any kind of video: from HD movies and TV shows to podcasts and music videos. The iPad supported video formats as below:

H.264 video, up to 720p, 30 frames per second, Main Profile level 3.1 with AAC-LC audio up to 160 Kbps, 48kHz, stereo audio in .m4v, .mp4, and .mov file formats;

MPEG-4 video
, up to 2.5 Mbps, 640 by 480 pixels, 30 frames per second,
Simple Profile with AAC-LC audio up to 160 Kbps, 48kHz, stereo
audio in .m4v, .mp4, and .mov file formats;

Motion JPEG (M-JPEG), up to 35 Mbps, 1280 by 720 pixels,
30 frames per second, audio in ulaw, PCM stereo audio in .avi
file format

Anyway,
if you want to rip your Blu ray and copy to your iPad or iPad 2
for watching, Let's start this painful process, shall we?

Step 1:

Free
download and install

dvd to ipad

, ready for the wonderful conversion.

Step 2: Add Blu-ray files

-

if you have inserted Blu-Ray disc to your Blu ray Drive, click "
Open DVD" button to load Blu-ray (.m2ts) files. or
you can click "
File" menu to import Blu-ray movie.

Step 3: Output settings

-

Select the output format as H.264 or MPEG-4 encoded videos that are

compatible with iPad; Under "Output" option, select a folder to save the files from Blu-ray to iPad.

And you can do more setting about the "bitrate, Size(piz), Framerate Audio channels" by click "Profile" option.

Step 4: Convert

- click "Convert" button to begin the Blu-ray to iPad conversion. After the conversion finished, you can transfer the Blu-ray Video to iPad with iTunes. Then you can enjoy the video on iPad with rich sound and vivid pictures!

Nowdays DVD is important and popular ,people like to play it ,and most people also want to copy the contents of the video DVD to their computer or other Portable devices for playing,but the DVD contents is Protected,so we are not allowed to do it directly,MacTheRipper is a good choice for the MAC user to sovle this trouble, at present,it is very popular ,more and more people become to use it .

Step 1.

Download
and install
mac
the ripper

To
install MacTheRipper, simply mount the .dmg archive by double-clicking it, and copy the MacTheRipper application to your Applications folder (or wherever you want it), along with this "Mac The Ripper Manual" if you need it.

Step 2.

Rip
DVDs for free

Insert
the DVD into your DVD drive and launch the MacTheRipper application. Then, you should set the RCE options if applicable.
If Mac The Ripper displays
'DISC RCE: -CLEAR-' after scanning the DVD in
the drive, you can leave the 'RCE Region' popup menu on '
OFF', as it is by default. Only (and always) set
the 'RCE Region' to 'OFF' when it says that RCE is
'-CLEAR-'.

Once

you've selected the type of extraction and options you want, you can go back to the 'Disc' tab and click the 'GO!' button (or hit the 'Enter' or 'Return' key) to start the extraction.

Step 3.

Finish

iPad is larger than the 3rd Generation iPod touch and iPhone 4, but there are many features and technical differences between the devices that merit closer evaluation. The iPhone 4 and iPod touch 3rd Gen run iOS 4, yet the iPad runs iOS 3.2 with iOS 4.

Flip camcorders have become popular for their easy-to-use and HD videos. It's a disappointment that iPad doesn't support the MP4 videos from the Flip camera. Because Flip cameras produce H.264/AAC files in an MP4 wrapper while others use advanced profile MPEG-4 in an AVI wrapper. So iPad video converter is your best bet that is one available conversion application to create compliant clips for iPad use.

This article is mainly for iPad and Flip users who like to import Flip camera video to iPad by just a few easy steps

1: If video from Flip camera is MP4 format, just import your Flip MP4 files to iPad, or you can import Flip video to iTunes, then sync to iPad, iPod, iPhone etc directly.

2: If video from Flip camera is AVI files, like Flip Mino 60, you will need to convert Flip AVI files to iPad friendly format first. Then Flip Video to iPad converter will be a good helper for a hassle-free experience and high quality HD(MP4) video output.

3: Flipshare(old version), can export flip video to WMV files, WMV movie also can not be accepted by iPad directly, you will need to transfer Flip.wmv formats video to MP4 for importing to iPad.

Step1: Download" video to ipad converter", Run it.

Step2: Add Flip files, set output as iPad formats, then Save.

Step3: Click"Start", convert flip video to iPad MP4.

The name

Blu-ray

Disc

[1] refers to the "blue laser" used to read the disc, which allows for

Six Times
more storage than on a DVD
. Usually a Blu-ray disc can hold 25/50 GB storage. But since June 2010, The BDXL format is capable of supporting 100GB and 128GB write-once discs. It sounds like Blu-ray become the only choice for High-definition video with up to

1080p/1080i
. With the introducing of

Multiview
Video Coding (MVC, 3D Blu-ray technology)
, MPEG4-MVC can compress both left and right eye views with a typical 50% overhead compared to equivalent 2D content, and can provide full 1080p resolution backward compatibility with current 2D Blu-ray Disc players.

DAPlayer is the ultimate Bluray/DVD/HD video player on the Windows PC. Up to 1080p Bluray, AVCHD, TS, MKV, MPEG4, H264 movies playback, it brings razor-sharp HD images as well as high-definition audio enjoyment. Many Internet users want to download Youtube videos. Downloading the videos can be beneficial in several ways including the option to play the video at any time without having to access the Youtube website on the Internet. It can also save bandwidth and be used to transfer the Youtube videos to devices like cell phones, media players or gaming systems that are usually not connected to the Internet or that do not offer the speed needed to enjoy the videos.

First of all, to make your job easier, you are advised to Get a toolbar for faster access to youtube.com.

2)

Click your favourite video clip, you can see the URL in your browser becomes something like this

3)

highlight the URL (like above) and right click the mouse and select "copy"

4)

Paste the URL at our

download
page

5)

When the download link shows, You should right-click -> "Save Target As" OR copy and paste the link into your download manager. Note:

You must
change the file extension to .flv

6)

The .flv file is not a common multimedia file, you need a software called FLV player to play it

7)

Install the FLV player into your computer

8)

Select the video clip that you downloaded and play

9)

If you want to convert the FLV video and play it in IPod, PSP, mobile phone(3GP format), then you need to download FLV Converter

VOB files are generally from ripped DVDs, including commercial DVD movies and non-commercial home DVDs. Besides VOB files, you'll find IFO and BUP files inside the VIDEO_TS folders which contains the features of the DVD movie.

It's a hassle to get all the way to the end only to discover that your video file won't play VOB on iPad (iPad 2 included). I recommend the [dvd to ipad for mac](#) to convert VOB files to iPad format, which provide optimized presets for iPad so you don't need to worry about the settings for your iPad or iPad 3G (iPad 2 included).

Step 1: Add VOB files to VOB to iPad Converter

Mac

Click the "Add File" button to add VOB video files to the

VOB to iPad converter mac
. This VOB to iPad video converter for Mac supports drag-drop and batch conversion, so you can import and convert several multimedia files at a time.

Step 2: Select iPad output format

Use the "Format" on the bottom of the window to control the output format. Select iPad Video(*.MP4) as output format, and click "Browse" button to specify a directory on your computer to save the output files.

Step 3: Start VOB to iPad conversion on mac

Click "Convert" to begin VOB to iPad mac conversion. The convert progress bar shows you how much of the encoding is completed.

what about the old movies on DVD discs we collected
before? Can we play them on iPad 2's high-resolution screen?
How?

As we know, there is no built-in DVD-ROM or DVD
player on iPad 2. And iPad 2 is only available with MP4, MOV,
H.264 video format and MP3, M4A, WAV audio format. So, if we want
to enjoy our old film on iPad 2, we need to rip our DVD discs and
convert those DVD movies to iPad 2 compatible formats. It sounds

complicated and not convenient at all.

For
watching
movies on ipad, you need to convert them to iPad compatible
format first. A professional yet easy-to-use

dvd to ipad
converter
is designed to solve this problem with 3 simple
steps!

Step 1: Load movies

Click

"Open file"

or just drag and drop the movie(s) you want to
convert to the program.

Step 2: Convert Movie to
iPad

From

"Profile"

drop-down list selecting "iPad H.264 or iPad MPEG-4

Movie" as an output format. Next to the

"Output"

area to click "..." to choose a folder to save the converted movies. Then click

"Convert"

button to start converting.

Step 3: Put movies on iPad

After converting the movies, Open iTunes and click "File" to add the movies you just converted to iTunes library; Plug in your iPad to computer, then iTunes will detect your iPad as a device. Select your iPad device on the left panel of iTunes, click "Movies" tab, check the videos you want to sync and click "Apply", done.

Ok, just transfer movies to iPad to enjoy movies, DVD movies, TV shows and lots of regular videos on your iPad so easily!

If
you're a music fan, you probably have several DVDs of concerts by
your favourite artists. And you may want to listen to the music
from these DVDs, say, on your iPad.

In
many cases, the 'soundtracks' of concert DVDs aren't commercially
available (and even when they are, you already own the DVD, so
why pay twice?). Why not rip the audio yourself, and make your
own live album from those favourite DVDs?

There
are several ways to do this. Some are a bit complex but here's a
method that's worth trying, which is relatively quick and
easy.

Download

dvd
ipad converter and install it according to the hints, you
will see the interface as follow:

Step
1: Add File - Click load dvd and then browse the computer disk to
get DVD which will be converted after a while.
Step 2: Set output format - Choose the audio format from
the profile drop-down list. Set audio track in the audio track
box.
Step 3: Choose Destination - If you want to put the music
to your familiar folder, click button to deal with it.
Step 4: Convert - Click convert to start converting
process.

The

iPad 2 is now here. For the most part, much of what I thought would be in the new model did actually come to fruition, but I got a number of surprises and also some dissappointments as well. The iPad 2 is clearly a strong second act following the first device, but the improvements are still more or less incremental.

In

the third version, Apple is going to have to up the ante considerably, because its competitors are going to have plenty of time in 2011 getting their respective offerings honed and improved for the next product cycle.

Let's

go through last year's predictions about various anticipated features in the iPad 2 to find out where the hit and misses were, and to see if there is room for improvement in any of these areas

that could make their way into iPad 3.

The iPad 3 specifications will
include more storage

The
iPad 2 has the familiar 16/32/64GB storage options, but as flash storage comes down in price a 128GB option for the iPad 3 isn't impossible - although that might depend on the current horrible situation in Asia, where the tsunami has caused chaos in parts of the electronics industry.

The iPad 3 features could include a
Thunderbolt port

Two
generations of USB-free iPads suggest that Apple just isn't interested in adding one, but the new Thunderbolt port found in the 2011 MacBook Pro could be another story: it's a combined accessory/display connector with astonishingly fast performance.

There could be more than one iPad
3

TUAW
says the iOS 5 code features new code files for USB devices in the iOS 5 firmware, Through this, TUAW found references to an iPad3,1 and an iPad3,2.

The iPad 3 may live in the
cloud

This
has been talked about and leaked about for so long that, on the
same principle that even a stopped clock is right twice a day,
it's bound to come true eventually: a cloud-based MobileMe for
storing your stuff on Apple's servers. A new iPad with iOS 5 and
a new MobileMe would be lots of fun.

Kung

Fu Panda 2

is

a 2011 3D American computer-animated action comedy film and the sequel to the 2008 film

Kung Fu Panda. The cast of the original film reprised their voice roles while the new villain is voiced by Gary Oldman. The film was released on May 26, 2011 in Real D 3D and Digital 3D. The film opened to positive reception and became an international success.

The

iPhone, iPod touch, and iPad game from THQ is actually a series of mini-games in which you control Po--the titular Kung Fu panda--as he continues his martial arts training. In "Paws of Power," a series of confetti-filled dummies are tossed onto the

screen--swipe your finger across the screen to smash them to bits, but be sure to not hit any of the beehives that are thrown into the mix as well. In "Feet of Fury," you bounce your way up a waterfall, jumping from platform to platform to go as high as possible. Be careful, though--some of those platforms might crumble under your weight and send you plummeting back to earth.

Look,
there's nothing necessarily wrong with borrowing from your betters. And the gameplay in Kung Fu Panda 2 is decent enough, if not actually inspired.I'm sure that kids who love the Kung Fu Panda movies will be perfectly happy playing the derivative games in Kung Fu Panda 2, and their parents will not be doing them a disservice by plunking down \$1 and getting them this game. I just don't understand why anyone else wouldn't simply download the other, better games that provide Kung Fu Panda 2 with much of its inspiration.

Just

as with other Apple devices, it is relatively easy to transfer songs to iPad from MP3 player on your computer. Doing so can allow you to listen to music anywhere you take your iPad. If you are not familiar with how to put songs to iPad from MP3 player, follow these simple instructions to learn how to do it.

Step 1: Connect iPad to computer and
add songs to iTunes

Connect

iPad with your computer and open iTunes and Click
"File" on iTunes menu and select
"Add File to Library" to add music to iTunes
library.

Step 2: Put songs to iPad from MP3
player

In

the resulting window (within iTunes), select the
"Music" tab from the top of the screen. In this
screen, you will be able to select what MP3 player music you wish
to put to the iPad. You can choose from your entire song library
or individual playlists.

Last,

click

"Apply" towards the bottom of the screen to put
songs to iPad from MP3 player. You're now ready to
play
music on iPad.

With

the release of iPad 2, iPad has becomes thinner, lighter, faster!

And it makes a fashion and comfortable thing to surf the web,
check email, watch movies, and read books on iPad 2 on the go.

How wonderful if this smart iPad tablet computer can play
DVD!

As

we know, there is no built-in DVD-ROM or DVD player on iPad 2.
And iPad 2 is only available with MP4, MOV, H.264 video format
and MP3, M4A, WAV audio format. It is a real brain buster to play
DVD on the beautiful 9.7-inch high-resolution and LED-backlit

display of iPad 2.

In fact, it is just easy to enjoy DVD on iPad 2 as long as you own DVD to iPad 2 Converter.

Step 1: Add DVD Movie

Click the "Open DVD" button to load the DVD movie you are going to watch on your iPad 2. After the movie is imported, there is a list showing each DVD chapter/title.

Step 2: Choose Output Format

Click the "Profile" drop-down list and choose "iPad" from the category. From the subcategory, choose "iPad H.264 Movie" or "iPad MPEG-4 Movie" according to your needs.

Step 3: Convert/Rip DVD to iPad 2

After making all necessary settings, click the "Convert" button to start to convert DVD to iPad 2. Sync the output video/audio to iPad with iTunes. Now you could watch DVD movies on iPad 2 anytime and anywhere.

Now

you can download over 1 million books for free in the EPUB and PDF format. Google officially announced that users will be able to download these EPUB texts from Google EPUB Archive of Google Books directly. You can download EPUB and PDF versions of these public domain books completely free of cost. All these books were out of any copyright, so this enables a reader to read them and also download that book legally for free.

Google eBooks are

stored in the cloud, so if you plan to read on the web using your computer, tablet, or on your phone, there is no file to download and you can read ebooks directly within the browser or application. If you plan to read using an eReader, you should learn more about the available ePub and PDF file formats, and how to transfer Google eBook files onto your eReader. A small number of ebooks may not be enabled for download to your eReader due to limits set by the publisher; those ebooks will display an alert message ("No download files included") before you purchase or get the ebook.

Some

ebooks are offered with flowing text or original scanned pages, or both. Google eBooks with flowing text allow for better control over your reading experience, such as the ability to easily adjust the font size, line spacing and paragraph alignment. Other ebooks with original scanned pages contain text that does not adjust to the different screen sizes of your reading devices.

The iPad is a great device for laying in bed and watching a movie on Netflix or browsing videos on YouTube, but sometimes you want to see them on the big screen. So how to you go about connecting your iPad to your TV? Whether you have an old TV from the dark ages or the newest HDTV on the market, it's actually rather simple to get your iPad hooked up to your television.

From
the iPad help file:

To connect an iPad to your TV or a projector, you can either use the Apple Component AV Cable, Apple Composite AV Cable, Apple iPad Dock Connector to VGA Adapter, or other iPad-compatible cable. If you're using the Apple Component AV Cable, high resolution videos will be shown in HD quality.

Use
TV Out settings to set up how iPad plays videos on your TV.

When
the cable is connected to a TV or projector, an application that supports playing video to an external display will automatically use it when playing video. Of the built-in applications, Videos, Photos, and YouTube support external video display.

Set

the TV signal to NTSC or PAL: Choose Video > TV Signal and select NTSC or PAL. NTSC and PAL are TV broadcast standards, used in different regions. If you're in the Americas, NTSC is probably the correct choice. Elsewhere, try PAL. If you're not sure, check the documentation that came with your TV or projector.

2 great iPad alternatives for Kids

Placed in the hands of kids, the iPad can be a valuable learning tool. You can watch

ipad

movies, play

ipad

games etc. But with its \$500 price tag

and likelihood of being tossed around, drooled upon, or

otherwise destroyed, the iPad probably doesn't make for the safest thing to give your budding technophile. What is a parent to do?

Start by taking a look at these five alternatives to everyone's favorite handheld babysitter.

Samsung Galaxy Tab

The Galaxy Tab's spec includes a 7-inch screen with a resolution of 1024 x 600 running the Android OS, and a variety of network access options. Social integration plays a big part for the Galaxy Tab, with plenty of options for integrating email, calendar and IM accounts. It also has Gmail access built in and MS Exchange ActiveSync. Internal storage is offered at either 16GB or 32GB,

with a microSD slot capable of providing an additional 32GB of storage, potentially matching the iPad's 64GB. It's available for around £500.

Motorola Xoom

This offering is the first to hit the market running Android 3.0 - aka Honeycomb - which is specifically designed to run on tablet devices. The 10.1-inch touchscreen device has a dual-core processor, 32GB of storage built-in (with the option for more via an SD card slot), 1GB of RAM, 1280 x 800 resolution and a claimed battery life of 10 hours. It can cope with HD video and, like the Flyer above, has a 5MP camera on the back but with a 2MP one on the front. It is quite pricey - starting at around £500 - and the range of apps tailored to this format is not yet anywhere near as impressive as those for the iPad. But those are two minor drawbacks for what is otherwise a very good device.

iPad 2 have many unique features to attract more users

iPad in the selection of hardware and software quality is much better than its competitors in the beginning, many things are still ahead now. Thus, although this thinner, more stylish and much faster iPad 2 that have not much breakthrough, it is still ahead of the competition. So who has purchased iPad is not necessary to upgrade to iPad 2? More importantly, iPad 2 can attract more users? All these issues will be answered below. Best

DVD to iPad Converter can perfectly rip DVD (including protected DVD) to videos so that you can enjoy watching DVD on iPad on the go.

Before release of the iPad, in fact, we already have iPod, iPhone, iTouch. Although the iPhone and iTouch software store makethem with the use of more diverse, but the family members of people seem to still prefer to do specific things. iPod is to listen to music, even now, with an iPod to listen to music is a very pleasant thing. Because professional, have a good performance. iPhone to the fourth generation began to support multiple applications, perhaps because of specific procedures in order to have a good performance. Apple step by step to expand its influence and even change our lives, it is the realization of this future concept. It is inappropriate to say that iPad 2 is a tablet that is easy evaluation. Despite improvements over iPad1, but both the hardware and software are very similar.

DVD to iPad Mac is specially designed Mac DVD to iPad converter to convert DVD to iPad on Mac. It also converts DVD to iPad video and audio on your Mac directly. The same 9.7-inch 1024 x 768 resolution screen make iPad 2 remain largely unchanged in size and shape. iPad2 built a new dual-core A5 processor, more memory, two cameras, but overall just make iPad2 improvement. Overall, this is a very beautiful, unique equipment. It is difficult to accurately showing the appearance of iPad 2 by photograph, only in your hand, you can really feel it's good.

In addition to work outside to bring a sense of exquisite, ultra-thin design with a larger curvature of the edge of design for better grip. Apple is known for industrial design, this time it still brought us a miracle, iPad 2 is indeed a well-built products. From the perspective of industrial design, iPad2 set a new benchmark to computer hardware in stylish, sexy side. After the success of the first generation iPad, Apple's designers are

not standing still, they brought some new things on iPad 2.
