There are numerous music centers for you to enjoy
songs, like iTunes, Google Music, Amazon, Billboard etc. As iOS
devices users, you can easily enjoy and download music from
iTunes. And what if you wanna download music to iPad from Google
Music, Amazon or other music sites? Here you can get some
hints:

It's not a tough work for you to listen to music on
Google Music or Amazon music on iPod, iPhone or iPad. You can
directly install the apps to achieve your aims. (If you only want
to use Google music on iPad, iPhone or iPod, you can click the
link to get more info: Google music on iPad.) But if you wanna
download the music or music video from those media sites
including YouTube, Google, Amazon, Facebook, you can download a
professional music downloader to help.

MicrosoftInternetExplorer4

Rip
DVD to AVI can help DVD fans to rip DVD video and convert to popular AVI video format. It supports all types of DVDs including normal DVDs, CSS protected DVDs, commercial DVDs, Sony ArccOS DVDs, all region 1-6 DVDs. Except AVI, it also support most of popular video formats such as FLV, MP4, WMV, MOV, MPEG1/2 as output video formats. You are also allowed to extract DVD audio to MP3 music file and grab images from DVD to BMP, JPEG. It offers a comfortable interface to carry out DVD to AVI ripping operations as easy as possible. The application completes the conversion pretty fast and with little impact on system resources compared to software of the same kind.

Download and install this free dvd ripper (free dvd ripper for mac) on your PC, launch it after installation. Bellow is one step-by-step instructions of how the "Convert DVD to AVI" works:

Choice
your DVD driver and insert your DVD disc;

Click
"Read" button;
(if your DVD disc is ready, program will read all the
video clips on your DVD disc)

Choice
one video clip;
(you can click "Preview" button to view the video clip,
program will show one standalone window to play)

Select
the output AVI video format;
(the default AVI video format is DivX, you can change
this setting and choice any format that you want. DivX codec
uses lossy MPEG-4 compression, where quality is balanced
against file size for utility.)

Click
"Convert" button to start the conversion;
(program will need you to select one folder on your pc
as the output folder, the output AVI files will be saved in
this folder. Please make sure that there is enough space on the
target disk)

Whether you want to watch a movie on your iPod or back up your too-easily-scratched DVDs, DVD ripping is a mysterious realm for many. Even those in-the-know find it difficult to keep up with the best tools for the job, especially in the face of increased copy protection. Today we offer you the best dvd ripper

software and

free

dvd ripper mac.

Handbrake is a

dvd

ripping software with a strong emphasis on not just ripping media but recoding it for playback on computers, portable devices, and other non-disc based systems. Handbrake can help you convert DVDs and other MPEG-based video into MP4 and MKV files. You can tweak settings like video frame rate and audio codec playback to your heart's content with Handbrake, and even batch encode all your media at one time to make filling up your iPod or other device relatively painless. The one major shortcoming of Handbrake is that it doesn't have any copy protection removal tools built in, which means you may occasionally need to use a 3rd-party stripping tool to prepare your DVD for conversion.

Lets face it guys, If you're a gamer, not a fake
but a REAL gamer, the kind that can seat like 48 hours in front
of the tele and burn those long and curvy high speed race tracks
all the way to the victory, or feel that you're the only true
mighty fighter on earth that can easily save his planet while
busting those mudda fucka ugly aliens that invaded from out of
space a few hours ago - if you're that guy/gal - then you should
know.You will like to play the
ipad 2
games.

1.Checkers Free HD

It's checkers. On an iPad. For free. What more do
you want to know? Oh, OK, then - Checkers Free HD is a pretty
decent version of the popular board-game, with a variable
difficulty level, configurable player names, an 'undo' function
for wusses, and a toggle for forced captures.

2.Compression HD

Compression HD is roughly what you'd end up with if
you used a hammer to smash Puyo Puyo into the garbage compactor
scene from Star Wars. Pieces fall, and you move and rotate them
to fashion lines of three. All the while, the walls are closing
in.

3.Dizzypad HD

Dizzypad is a one-thumb game which has you tapping
the screen to have your frog leap between rotating lily pads. If
he falls in the drink, he dies (pollution, eh?), but extra lives
can be gained by munching bugs or bravely skipping lily pads.
Extra modes are available via in-app purchase.

4.Harbor Master HD

This game might look like Flight Control in the
drink, but the gameplay mechanics are subtly different. As with
Firemint's effort, Harbor Master is a line-drawing game, this
time with you drawing paths so boats can dock. However, once
they've unloaded, they must leave the screen or sometimes visit
another dock, ensuring things rapidly become complex and
frantic.

5.Hole-in-a-wall HD

Hole-in-a-wall HD is pretty much the space-age
equivalent of that Saturday evening TV show where daft people try
and fling themselves through holes in a wall. Here, though, you
swipe to rotate a shape, aiming to fit it through a very specific
gap. The game doesn't come off flawlessly (it's often hard to

judge alignment as the wall zooms towards you), but perseverance
reaps rewards.

Just as Apple Inc says: "the iPod touch is music,
movies, games, and apps. All at your fingertips". Indeed, as a
portable media player, personal digital assistant, and WIFI
mobile platform, Apple has sold 20 million unit as of September
2009. The iPod Touch is currently in its third generation (3G),
which is available with 32, or 64 GB of flash memory. So powerful
storage capable attracts more and more guys to import
dvd to ipod touch for
watching DVD Movies on iPod touch...

The software you will need:
ipod
dvd converter or
ipod
touch converter

Step 1: Load DVD movies into the program.

1. Right click the "DVD/CD" node in the left
panel.

2. This program supports DVD disc, ISO file,
and IFO file. You can load DVD movies by "Open DVD" (DVD
disc or DVD folder), "Open ISO Files...", "Open IFO
Files...".

Step 2: Rip and put DVD movies into iPod.

1. Check files you want to sync.

2. Click "Export Checked File(s) to Device" button
to start your conversion process.

After a few minutes or so, your DVD movies will be
put into your iPod.

OK, done.

The following article focuses on different channels of listening to music on iPhone 4S. To enjoy music on iPhone 4S, you first need to get the music in iPhone 4S format onto iTunes library(tip:
transfer
iphone to new computer) and then sync the music to your iPhone 4S.

Step 1. Click "Back Up My Music & Videos to iTunes".

The blue icon means the file is in iTunes library.
You can check "Show files not on iTunes only" to filter files
that are not in iTunes. If you have a bunch of media files on
iTunes, ou can search for any file by typing its name in the
Search blank.

Step 2. Select the music/videos you want to backup
and click "Back Up".

After finished, click "OK'.

Note: Your iPhone 4S contents will be copied to
iTunes and computer simultaneously. The default computer output
path is *.My DocumentsiMate. If you want to back up
iphone
playlist to itunes to a specified place, you can click
"Settings" and set the output path as below:

All right, now you have transferred iPhone 4S to
iTunes.

Similarly, you can use the way to

transfer ipod to
pc.

Need some ideas for Christmas games for kids?
Whether you're hosting a Christmas party for kids at home,
school, or church, here are some great ideas for games for kids.
These holiday games are also excellent for family gatherings,
when kids of all ages are looking for ways to have fun. Party
on!

1. Visit your local store and purchase a candy jar.
Fill the jar with candy goodies like colored M and M's, gum drops
etc. Ask the

 kids
 to guess the amount of candy in the jar. Everyone only
gets 1 guess and the person whose guess is closest to the actual
amount wins the jar of candy.

2. This is a traditional

 Christmas
 game for kids.
 Wrap a Christmas gift in several layers of paper before
the party begins. You can have as many layers of wrapping paper
as there are kids. Fasten each layer with tape. To play a game
everyone sits in circle. Play music while passing the parcel
around from person to person in the circle. As soon as the music
stops, the person holding the parcel removes as many layers of
wrapping paper as possible. Then play the music and begin passing

again. The person who removes the last layer of wrapping paper wins the game.

3. This fun and

  simple
  Christmas game for kids
 requires a different types of hats, coats and scarves
and whatever accessory you can think of that a snowman might want
to wear. Throw everything in one large pile and separate the kids
into groups. Play Christmas music in the background as the race
begins on who can dress their snowman the fastest is the
winner.

There are many iPad apps available in the web but
finding ones which are useful at the same time stable, is not
easy. Because we have already made it our concern to find
something anything useful, we decided to share with you the best
iPad entertainment apps for your amazing tablet. These iPad apps
are not only the best but also very popular in the web now. We
hope that these article can help you in your search for apps that
truly rock! If it does please share this article to your friends
so that they too can have these apps.

1. Yahoo! Entertainment

This is a great free application from Yahoo that
provides you with a lot of information about any TV shows that
are currently airing or are about to air. You can plan your TV
viewing using the interactive Program Guide, watch free videos
provided by Yahoo and read the latest news in any category using
this iPad application.

2. ABC Player

ABC Digital has thankfully jumped on the whole
Internet TV bandwagon (a lot of other companies are also doing
it) and not only have they created an online streaming channel,
but also released their own apps for desktop computers, and now
the iPad. Kudos to them, because thanks to this app, you can
freely stream their channel right onto your iPad at very good
quality and speed, and watch some of their best shows (and sadly,
commercials) whenever they air.

3. Marvel Comics

Marvel's comic reading application or the iPhone
has become very popular, but due to the small screen, it's not
that comfortable to read the comics on it. Now the iPad is in a
totally different league. With its large screen and
1024×768 resolution, you can easily view and read full page
comics in a comfortable manner, like you were reading the actual
paper magazine.

4. Ocean Blue

Ocean Blue is an excellent application (some people
call it a game) for relaxing and learning a lot about aquatic
life. The game has excellent 3D graphics of underwater sceneries
and fish, and you learn about them as you sort of swim along
them. Children also love it and it's better for their brain than
some shooters or even racing.

5. Mixr

This is an amazing unique (for now) application
that replicated the function of a DJ turntable! Thanks to the
iPad's great touch screen, you no longer have to spend $2000 for
a turntable to create a nice DJ mix party at your home or local
club. And in conjunction with other apps, the functionality can
be extended by a very high degree.

With the benefit of iOS camera, we do like to record those beautiful scenes in our lives. But problem is there are numerous fabulous still photos in our iPhones, iPods or iPads, but the memory of these iOS devices are limited, so how can we free the space without deleting them? That's to say, if you want to transfer photo from iphone to pc without losing original pictures in iPhone/iPod/iPad, what's the next step? This article gets an answer - you need a third iPhone photos transfer.

Step 1: iPhone 4S to PC Link

When you have downloaded and installed this iphone

to computer transfer on your computer, you should first get iPhone 4S to PC link done before you run this program. After you have get your iPhone 4S connected with your local computer, you can just start to operate the software.

Step 2: Pick up Image Files on iPhone 4S

This step is designed for you to choose files for transferring. Under "Photo" and "Camera" options can you get access to image files on iPhone 4S, just open each option and choose files.

Step 3: Copy iPhone 4S Photos to Computer

This step is for you to transfer photos from iPhone 4S to computer/PC: directly drag and drop the selected files to computer, or right click on the selected image files and "Transfer to" computer, or click on the Transfer button to transfer pictures from iPhone 4S to computer in "Transfer to list".

If you have an iPod, how to put youtube videos on ipod? Please contact me.

The iPad 2 release date is March 11th. As one of
the most amazing tablet in 2011, iPad 2 will take us more
enjoyment on enjoying photos, watching videos, listening to
music, reading e-books and much more. Enjoy videos on iPad
2 should be your first choice. With the iPad 2, you can
watch video anywhere, anytime, if you have a long air travel,
watching movies on iPad 2 makes the time shorter. The most
common movie format is DVD, Maybe you have many DVD Discs, But
it's hard to take, and the iPad 2 can't play all
formats video include DVD, just have a look.

Step 1: Run
free dvd ripper
software, and load DVD movie files into it.

Three ways are available to load DVD movie files,
including "DVD Rom", "DVD Folder" and "IFO/ISO" icon.

Step 2: Select subtitle and audio track

Click on the dropdown menu of "Subtitle" and

"Audio" respectively to select your needed languages as final
output subs and audio track.

Step 3: Choose output format for iPad 2

To do DVD to iPad conversion via
dvd
to ipad 2 converter, you just need click on the drop down
menu of "Format" to simply choose an output format for iPad 2
from "iPad" option.

Step 4: Rip DVDs to iPad 2

Click the big button "Convert" to
rip
dvd to ipad 2 compatible file format. Once the DVD to iPad 2
conversion is done, you can click "Open" button to get the output
files for playing/watching on iPad 2 with ease. Hope it
helps.

Sometimes using iTunes seems very difficult as we
got feed up of the interface and slow speed, so today I am going
to share a new trick as a step by step procedure to
copy
files from ipod to pc without using iTunes.

Firstly, Download
ipod to pc transfer and
fire up the software. Then, the following main interface pops
up.

Step 1: Connect iPod

Dock iPod and open it, connect iPod to your
computer through USB cable.

The software will automatically detect the iPod,
display all the contents of iPod in the left device list and show
its device info on the right window.

Step 2: Select songs

Locate the library or playlist in which your songs
stayed and check the songs to be transferred in the file list on

the right window.

Step 3: Copy songs back

Click the "Export to Local" button to select the
target folder for saving iPod files in the dialog that appears,
and then start to
transfer
music from ipod to pc.

Step 4: Eject

From the File menu, choose Eject and Eject
All.

iPhone 4 is a mobile phone, a portable email

device, a Web browser and an iPod. It is also capable of showing full-length movies. While the screen is tiny, the resolution is good, and you can plug in your earphones and watch and listen away. Once you start, you won't want to stop

watch

movies on iphone 4.

1. Download the latest

dvd to iphone 4

converter. Install and run it.

2. Click the "Open DVD" button to load the DVD movie. Alternatively, you can click "File -> Open DVD..." to import the DVD disc. After the DVD is imported, there will be a list of DVD titles showing in the program.

3. Tick the longest DVD title from the list. Double click this title and you will preview the movie in the program.

4. From the "Profile" drop-down list, navigate to the "Apple iPhone" category and choose the most appropriate output format for your iPhone. Note: You can also customize a specific profile to meet your needs. Click here to learn more.

5. Click "Start Encode" to start to

convert

dvd to iphone 4 video.

6. Add the output files to iTunes and sync them to your iPhone 4.

The iPod is probably the best portable music player
the world has ever seen. It's simple to use, easy to operate, and
instantly updatable. It's easy to take this beautiful and
reliable device for granted. But the iPod isn't perfect. One of
our pet peeves is the inability to transfer an iPod's music back
to a computer. There are a handful of nice applications you can
use to take back control of your iPod.

iPod to Mac
Transfer is a Mac OS X application that compensates for the
iPod's only downside: Apple only allows you to copy songs to your
iPod. If you have two Macs and want to use your iPod to transfer
music from one to the other, or you only store your music and
videos on your iPod and need to copy them back onto hard drive
after a disk failure, you are out of luck! This is where it comes
in: it allows you to
transfer
songs from iPod to Mac running OS X 10.4 or higher.

Step 1. Run the recommended program and connect
iPod to your Mac
Launch iPod to Mac Transfer and connect your iPod to Mac

and the program will detect iPod, then you will see all
information about iPod device are shown in the program interface
like the following picture.

Step 2. Copy music from iPod to Mac
Press on the "music" icon in the left pane to open the
library/playlist that you want to transfer. And click on the
"export checked files to local" button.

Step 3. Specify a folder to save your music
files.

There is a pop-up windows and on the left panel you
can select a local folder to save your music. Then click on the
"Save" button to export music from your iPod to local
folder.

Step 4. After it finishes transferring music from
iPod to Mac, you will see a pop-up information dialogbox.

Now you have known how to
transfer
music from iPod to Mac. Why not just free download it and
experience it fro yourself? Come on!

iPad 2 is so hot and popular now, and I think it's
really the best solution for games and video/audio playback as a
portable media player. But for share DVD videos on iPad 2, we
have to rip DVD to iPad 2 first. Then,
how
to convert DVD to iPad 2 is the problem we have to
solve.

Step 1 Run and import

Run
free
dvd to ipad 2 converter. Click "load DVD" to import DVD
chapters and titles from your computer to the program. After the
DVD movie is added, all titles are listed.

Step 2 Output Settings for iPad, iPad 2

Set the output format - from the "Profile" drop
down list, choose iPad > iPad H.264 Video(*.mp4).

Step 3 Start to convert at "Start"

That's it. The whole
DVD
ripping process for iPad, iPad 2 would last for about 20
minutes - 1 hour. If your conversion takes too long time, learn
how to speed up DVD movie to iPad conversion. When the conversion
is done, you can approach the output file by clicking "Open
Folder".

Forty-four percent of US children want an iPad
under the Christmas tree: A lot to ask for in a country where
46.2 million people, or nearly 15 percent of the population, live
in poverty.

In New York City, personally meeting Santa Claus is

a lot easier than it sounds. Since November 25, four Santas have been available daily at the Macy's department store, from early morning until late at night, to hear children's pleas for what they want for Christmas.

But it requires parents to navigate with their children through the huge store's eight floors.

Those who really want to play it safe may wish to write a letter to Santa, and Macy's has a North Pole post box for just that purpose.

Jasmine Morrobel, 9, knew what she wants to find under her tree: "Dear Santa, I believe in you, and I want an iPad for Christmas. Yours, Jasmine from New York City."

The jolly old elf will certainly be familiar with the request:

according to the market research institute Nielsen, 44 percent of US children ages 6-14 want an iPad this year. Of course, most won't actually get one: the cheapest version of the Apple gadget costs 500 dollars.

According to Nielsen, 30 percent of the letters to Santa from US children are topped by an iPod, while an iPhone appears on another 27 percent.

Young Suri Cruise, of course, presumably has no budget constraints. The daughter of Hollywood stars Katie Holmes and Tom Cruise made headlines with her extravagant wish list.

The US magazine In Touch cited her alleged letter to Santa, which reportedly listed a pony, diamond earrings and custom-made princess gowns as the 5-year-old's favorites. The items on Suri's Christmas wish list cost a combined 130,000 dollars.

Her parents have reportedly already bought the
pony. Tom and Katie spare no expense to make Christmas as magical
as possible for their little one, the magazine quotes a friend of
the family as saying: They buy everything on her list.

As we know, iPad 2 features two powerful cores in
one A5 chip, that means users can get more wonderful experiences

while surfing the web, gaming, and going from app to app,
watching movies. So if you are thinking of buying an iPad 2, you
can hardly wait to watch your favorite videos with it. Like iPad,
Apple iPad 2 only supports H.264, MPEG-4 in MP4, MOV, M4V video
formats. That's to say, you need to
convert
video to iPad 2 compatible format first.

Step 1: Add video file

Free Download the
ipad
video converter (
ipad
video converter for mac) install and run it. Hit "Add File"
button to import video file you want to play on iPad 2.

Step 2: Set iPad 2 MPEG-4 format and iPad 2
supported resolution

Click the drop-down button on the right side of the
"Profile" to select MPEG-4 Video (*.mp4) as output format. Then
press "Settings..." button to select wanted resolution like
640*480 or 720*576 or 1280*720 from the drop down list of
Resolution or define your desired video resolution by overwriting
the existing one.

Step 3: Convert video to iPad 2 compatible
video format

press "Convert" button to finish converting video

to iPad 2 supported video format.

YouTube.com is a great resource. YouTube allows
users to freely upload, view, and even share video clips on your
blog or web site. Now the new iPad is a much better device to
videos on than any previous version of the iPod and iPhone, there
are many people curious about how to get their YouTube video
files into a format that the iPad/iPad 2 can play. Thankfully,
there are a slew of sites and software packages that will allow
you to convert just about any video format to the H.264 mp4
format that iPad/iPad 2 requires.

The tutorial shows you how to
download
YouTube videos to iPad, and convert YouTube videos to iPad
video format for playback on iPad/iPad2. DVD to iPad Converter
features a built-in Free YouTube downloader for iPad, which
allows you to download videos from YouTube to iPad
directly.

1. Click the "YouTube" button in the main interface
of
free
dvd to ipad converter to start the built-in YouTube to iPad
app. In the pop up dialog of "Import Video from Internet", paste
the URL of the YouTube video you copied just now.

2. If you want to watch the downloaded videos from
YouTube on iPad, you can choose MP4 as output format from the
built-in YouTube downloader, then sync the downloaded MP4 files
to iPad from iTunes.

The iPhone 4S is like its earlier version as far as
external features are concerned. However, with the new processor
and A5 chip and iOS 5, iPhone 4S is the best gadget in the market
for game lovers. Now playing a game in your iPhone 4s set will be
faster with cleaner, crisper graphics. Frame rates, game loading,
and launch times are better as compared to iPhone 4 version. We
choose 5
best
iPhone 4S games for you.

1. Dead Space

Dead Space should be a household name to any
hardcore gamer. The series offers such a compelling horror feel
and story that the iOS game is a strong companion to the console
versions of the game. Dead Space on the iOS was made to promote
and hype up the launch for Dead Space 2 but managed to stand out
on its own as a great horror title, with crisp graphics and
dropping onscreen buttons for a full view of the game.

2. Machinarium

Machinarium is a rare game that stands out in a sea
of clones and sequels. First making its release on the PC back in
2009, Machinarium has finally made it's way to the iOS. It plays
very much like an old school point-and-click adventure. Needless
to say, it fits right at home on the iOS.

3. Rage HD

While Rage has just launched to consoles, Rage HD
has been out for awhile to offer players a small teaser of the
full title. Even though the game has already been released, Rage
HD is still a great game to pick up and play for the iPhone
4S.

4. Asphalt 6: Adrenaline

Asphalt 6: Adrenaline is a racing game. While I'm
unable to expand too much on what the game is about, I'll say
simply that it's a great game for what it offers.

5. Spider-Man: Total Mayhem

Developed by Gameloft, Spider-Man Total Mayhem lets
you experience a day in the life of Peter Parker. Take on some of
the daily tasks and errands that pop up in the city as you swing
from building to building. While this game may not have much of a
storyline (or character development, for that matter), the web
action and boss fights make up for it.

Apple first sold all of us on the digital music revolution using the slogan "Rip, Mix, Burn." Indeed, thanks to Apple software, it was suddenly dead simple to copy and burn music CDs using your Mac. But what about video DVDs? It turns out there are a few hoops to jump through, but in the end, it's pretty easy, even though you may need to invest in some additional software.

Before burning DVD, you must confirm the Burn DVD Mac has been installed and the blank DVD-R/DVD+R/RW/-RW

Step 1: Run the software
Start the mac dvd burner or mac dvd creator software, and you will see the following friendly interface.

Step 2: Load Video files to burn.

You can add video files by clicking the Add buttonhow "+"
to burn dvd mac to load video files or clicking the "File" menu
and then "Add Video".

Step 3: Check the added video files
Preview the added file in the preview pane to check the
file. If you don't want to add it ,you can delete the selected
file by pressing the Delete key "-" how to burn dvd macon the
keyboard.

Step 4: Edit Video Files
The software support powerful edit functions. You can trim
and crop the video files and adjust the effects before burning
the videos to DVD on Mac OS X.

Step 5: Edit DVD Menu
The DVD Burner for mac also allows you to create your own
DVD menu with various built-in resources. Click the Menu
buttonhow to burn dvd mac on the bottom right of the main
interface to edit the DVD's menu.

Step 6: Select DVD type and the output quality
Before burning your DVD, you can select your DVD type and
the output quality at the bottom of the main interface. When you
choose different formats or qualities the recoding time of the
DVD is different.

 Step 7: Burning
Check the above settings and then click the Burn button to
set burning settings and burn your DVD project.

The iPad is the first tablet computer developed by
Apple Inc. It is part of a device category between a smart phone
and a laptop computer. The following tutorial is going to show
you
how
to get movies on ipad.

In order to watch the DVD movies, what you need to
do is simply rip the DVD movies into a video/audio format
supported by iPad. After you have the files in a compatible
format upload them into your iPad through the sync of iTunes
Library.

Step 1. Insert the DVD that you want to put on your
iPad and run
dvd to
ipad ripper.

Step 2. Click "Add DVD" to import the DVD.

Step 3. Select iPad compatible video format, such
as Apple iPad H.264 Video, Apple iPad MPEG-4 Video or Apple iPad
HD Video (720p).

Step 4. Select a output file directory and press
"Start" to
rip dvd
to ipad.

Upon receiving her new MacBook Air, my mother asked me how she's supposed to watch movies on the plane without a DVD drive. If you've got people asking you similar questions, here are some easy-to-follow instructions for ripping a DVD to your computer.

Ripping a movie to your hard drive can seem like a
complicated task, but it's actually pretty simple. There are a
lot of ways to do it and a lot of different programs out there,
but our favorite method uses a program called
free
dvd decrypter. It's pretty easy to use, and available on both
Windows and Mac. The video above should walk you through the
process, but you can follow along with these instructions.

Step 1: Download and run the software.

Step 2: Click "DVD" button to load your DVD files
that you want to rip for your computer.

Step 3: Click the "Profile Setting" combo box to
choose a suitable video format like VOB HD as your output
choice.

Step 4: Click "Start" Button to begin to ripping
processes.

Step 5: Get the ripped video files via clicking the
"Find Target" button and then you can play the DVD videos on your
computer now.

With
dvd
ripping software free, you just need five easy steps and then
you can solve how to

rip
dvd to computer, which is easy for every user.

```

When Apple announced the iPad, I immediately
imagined that it would be a superior way to read PDF books in a
tablet-style format. On the Apple iPad Specs page, there is a
single mention of PDF support for the iPad - in the Mail
application as an attachment. However, there must be a way to
view PDF files on the iPad natively, right? Let's walk through
two main ways currently available to
view
pdf on ipad.

Built-In PDF Viewing

Mail Application - The iPad supports viewing PDF
files that are sent as attachments via email in the Mail
application. Simply download the attachment, click to launch, and

you can view the PDF.

Safari Web Browser - Also, selecting a link to a
PDF file in the Safari web browser will also allow you to view an
image inline.

In both cases, notice that there is a border around
the pages in the PDF content. I would prefer to have the content
take up more of the screen. No problem - just pinch and zoom in
to hide the borders. This choice is remembered as you navigate to
subsequent pages.

There are limitations to the built-in support,
however. If you reopen a PDF file, it does not maintain the
last read page location. And if there are clickable links
in the PDF, such as in the Table of Contents, you cannot click on
them. So, you're stuck scrolling down potentially hundreds of
pages to get to the location you want.

Ideally, I would like to see Apple include their
Preview application on the iPad. Even if it was only a PDF viewer
and did not allow changes to PDFs, being able to jump directly to
a particular page and use general PDF navigation would be
helpful.

I found iPod Touch photos backup can be so easy
when I used this handy iPod Touch photos to computer transfer
software. With it, you can easily copy your save photos on your
iPod Touch to any folder on your computer.

Why so many users choose this
ipod to pc transfer
program:

- Works with all iPod models: iPod Touch, iPod
nano, iPod mini, iPod shuffle, iPod classic.

- Auto-scanning: Auto-scans your iPod device, and display all your photos on tansee software screen.

- View photos: You can view photos on your computer in two different size, big or small.

- Backup photos in different resolution: transfer photo from ipod to pc in three resolution: big, middle, small. Tansee iPod Transfer Photo backup your photos in full resolution.

- Read .ithmb files: Convert the .ithmb Files on your computer Hard Driver into JPEG or BMP Copy your .ithmb files and the associated "Photo Database" to a disk (for example D:) in structure as below: D:PhotosPhoto Database (Driver D: can be other one) D:PhotosThumbs*.ithmb (All your ithmb files) Then run Tansee iPod Transfer Photo, you can transfer photos out.

- Backup to any folder: You can easily and quickly back up your photos from your iPod and transfer files from ipod to pc, iPod touch to any folder on your PC.

And what's more important, it's Easy to use. And there are very good Options Setting when transferring the iPod Touch photos to Computer.

Products.

But there is good news on the horizon, as now it
appears Flash Video can be used on the iPad with a helping
hand.

This helping had comes in the form of the jailbreak
app named Frash. This app will allow
play
flash video on ipad. It appears this will work only on a
jailbroken iPad.

"Frash is able to run almost
all Flash programs natively in the MobileSafari browser,"
said Comex, which also created the Spirit untethered jailbreak
tool for the iPhone, iPad and iPod touch, in the
description for the YouTube video created to show the hack in
action.

Pocket Lint, the company added that support for
other devices, except 3GS+ only due to technical restrictions,
will come shortly. Support for iOS 4 is also planned.

The iPad has received positive reviews from both amateur and pro musicians, who seem to have found its touchscreen interface extremely convenient to work with during live shows and even in the studio. Many music software makers have realized the potential of the iPad as a musical instrument and released tablet-friendly versions of their respective software.

1. MadPad HD

MadPad HD is, at its heart, an audio sequencer; a device to loop sounds in order to create percussive or musical clips. However, it does so with miniature video clips recorded from, basically, anything. You can record 12 individual

small clips of unique sounds, store them on your iPad (or in the cloud) and then play them back by tapping on each thumbnail. A basic looping function is included, plus you can record a larger sequence. You can also change the pitch and volume of each clip, effectively turning a person speaking into a Smurf or Barry White, or making a mundane noise, such as traffic, much more interesting.

2. Vevo

If you like music videos, then Vevo is where it is all at and is pretty much an essential app for your collection. Land on the homepage and there is a carousel of several featured artists and videos. It's bold, it looks sharp and there is no messing around. Hit the one you want and the video streams, it's as simple as that.

3. Sonos Controller

This handy app acts as a free wireless music controller for your Sonos system. Download the app, install it, press a button on any one of your Sonos ZonePlayers and away you go. It really is that easy. IT enables you to manage your library remotely, and stream music to every room - you can either play different songs in each room or sync all your ZonePlayers to play the same song. Volume can be controlled via the hardware buttons on most Android phones.

4. GarageBand

 This is the most fully functioning music app

out there giving you what the majority of individual apps offer, but only better and in one package. You get to play piano, guitar, bass, drums, vocals, and if you've got the right dongle, even record your own guitar playing as well. Broken down into a number of different areas or instrument groups, the idea is that you can play your favourite instruments, lay down a track, and then edit and manage them into a song before exporting said track into iTunes or your desktop and then share it with your friends.

5. SoundHound

You've probably heard of Shazam. We mean, who hasn't? Shazam is a brilliant app and has rightly been massively successful in the app world. But what if there was an app that could do all of what Shazam could, but with added extras? Ah, but there is. SoundHound is like Shazam, but turned up to 11. It's Shazam's bigger, better looking nemesis, that not only recognises music that you play to it, it can also tag tunes that you sing and hum to it. And if you're too shy to sing or hum, you can even just speak the lyrics into it, or type them in if you're feeling shy.

I'm a big fan of the iPod but what I don't like is
Apple not being very forthcoming about how to move music from the
iPod back to the PC. They're quick enough to tell you how to transfer
music from ipod to pc but when you want to do the opposite,
Apple clams up tight.

1. In Windows Explorer, go to Tools > Folder
Options > View. In the Advanced Settings list, under Hidden
files and folders, check the radio button for "Show hidden files
and folders". Then click OK. You'll get a Windows security
warning but it's safe enough to disregard it as we will only be
disabling this function for a short while.

2. Plug in your iPod. In Windows Explorer, a folder
will now appear with the name of your iPod. Double-click on that.
Go to the sub-folders "iPod_Control" and then "music". You'll
find your music there randomly scattered across multiple folders
and with scrambled file names. But don't worry, the ID3 tags are
still fully intact and we are now going to "unscramble" the
files.

3. But first copy all the music from those iPod

folders into a new folder on your hard-drive. Move all the songs
into one single folder and discard all the folders that your iPod
made. By the end, you should have one folder in your hard-drive
with all the scrambled files together.

4. Open up iTunes and do the following : Go to Edit
> Preferences. Under the Advanced tab, under the General
"sub-tab", select the local folder where you have copied the
music from your iPod (by clicking Change…).

5. In iTunes, click "File" then "add folder to
library". Select the folder where all your copied music is.
iTunes will now re-import all your music back into the playlists.
But more importantly, because you have previously clicked "Keep
iTunes Music Folder organised", iTunes will now start renaming
and organising your songs into their correct names, albums and
folders. This may take a while depending on how many songs you
have in your iTunes library.

mso-fareast-language:#0400;

mso-bidi-language:#0400;}

WMV stands for "Windows Media Video", which is
developed by Microsoft. WMV files are usually ASF files with a
WMV extension. It can store video content in a compressed
format.

Though originally used for windows operating
system, the WMV format has become very common. However, in this
area, they always include DRM protection, that prevents illegally
duplication. Unfortunately, Songs bought from different companies
will have different DRM protection that can restrict you from
playing videos on incompatible players. Also, DRM restrict the
usage of computers, so you just can't share you DRM-laden music
with your friends. There comes the headache!

Step 1. Download and install the
wmv
drm removal.

Step 2. Add WMV files

Click on Add button to add the WMV files to the
program.

Step 3. Customize output settings and Start

conversion

Choose an output format from "Audio files to" or
"video files to" area.

Step 4. Start to remove DRM WMV

The last thing is to click the "Start" button to
start removing DRM from WMV files.

mso-fareast-language:#0400;
mso-bidi-language:#0400;}

By default, iTunes is the only media player that
you can use to sync your iPhone and iPod Touch with your
computer. However, iTunes is only supported in Mac and Windows,
which means Linux users with iPhones will have to find an
alternative way to sync their iPhones, or at least get their
music into the mobile device. In addition, there may be a large
group of Windows users who are using other media players (such as
Winamp) to manage their music library and loathe the idea of
migrating the whole library to iTunes just because they bought an
iPhone.

Step 1: I know this may sound a bit ironic but
you'll need iTunes installed so that CTM can find the drivers for
your apple device. Also, you'll still need it for syncing apps.
In case your iTunes is not up-to-date and you don't feel like
downloading another 90MB just for drivers, then CTM has its own
driver installer, which you can download here.

Step 2: Download
ipod to mac
transfer. Once you save it to the desktop, run the software.
It'll take some time to start, so be patient. You'll then be
greeted to CopyTrans Control Center. From this list, select CTM
(Free).

Step 3: The CTM window will pop up with lots of
blank windows. Simply connect your iOS device and you're all set.
If all your drivers are installed, CTM will immediately recognize
your device and display its content if there is any.

Do you want to download movies to ipad? Your Apple
ipad is a really cool useful device. You can read books on your
ipad, listen to music and download all kind of cool apps to it.
One of the coolest and best features are that you can watch
movies on your ipad. On this site we are going to tell you
how
to download movies on ipad.

Typical aspects of iPad include portability and
high quality output. It is comprised of various applications that
are made more conducive for every user. Movie download for iPad
doesn't need too much cost. In fact, it can be totally free of
costs. Free movie download for iPad are highly recommended to
experience its ultimate purpose. If you can't watch dvd, You need

convert
dvd to ipad.

With the use of an internet, there are numerous
legitimate sources wherein you can easily find free music and
movies. You can automatically download these applications for
your iPad, Android and any types of smart phones. Watching
television movies and shows has now radically shifted from TV
sets to iPad gadgets. You can watch plenty of TV shows as well as
numerous channels such as Discovery Channel, CNN, NBC, Fox and
HBO.

The following are some basic procedures in

downloading
free
movies for ipad 2. First, select your preferred movie file.
You can browse the movie catalogue and just simply click it.
Then, transfer your selected movies into your iPad.

Although a little clunky to set up, Hot Wheel's
iNitro Speeders gives the option of using an iPhone to control
its little remote control cars. The iPhone app includes the
standard dual stick controller, but also lets you drive the car
with the iPhone's accelerometer, choose a predefined driving
pattern, or draw your own pattern.

Push the control stick forward, and the car takes
off like a shot. Hit the turn stick and it pulls 180s and 360s.
The car is a little too fast, making it difficult to control.
Instead of having the front wheels actually pivot, the car turns
by torque, shifting power to the left or right.

But the cool thing is the iPhone app controller.
The car relies on infrared signals for its remote control,
something not native to the iPhone. So Hot Wheels includes an
infrared module that plugs into the iPhone's headphone port. It
is not the most elegant solution, but it works.

Hot Wheels says the iNitro Speeders are appropriate
for children eight years old and up. Not many children that age
own an iPhone, but many a parent hands over a phone for games.
And although having to attach the control module to the iPhone is
a little clunky, the app gives some interesting control
possibilities. It also includes a built in racing game you can
play anywhere.

IGG Software, which is planning to release a
version of its iBank financial software for the iPad sometime
later this year, has teased a new feature of the unreleased app
on its developer blog. The product now has a name -- iBank Access
-- and will feature a new optional service to automatically keep
bank records and the app in sync every time the app is launched.
The new feature, which expands the number of institutions
available, will be available by subscription.

The program has largely been built by veterans from
Intuit, the makers of Quicken who have had a spotty,
on-again-off-again relationship with the Mac and iOS market.
Intuit is presently planning to upgrade Quicken 2007 to make it
Lion-compatible, which should be released on or around tax time.

The iBank program has emerged as one of a handful of popular alternatives for people who can't find what they want from Quicken.

The iBank developers also say they will be adding iCloud syncing compatibility into forthcoming editions, and maintaining Mobile Me iDisk compatibility until the service goes offline in June. IGG Software hopes to have the finished iBank Access for iPad out sometime during the summer.

Valentine's Day is a very special holiday and well,
as always, there are lots of great apps for that. In fact, there
are hundreds of applications for that and we continue to tell you
about the best Valentine's Day iPad apps you might like or find

useful for the most romantic day of the year.

1. Send eFlowers

All men should know that flowers really matter to
the women, especially on Valentine's Day. If you can't buy or
send flowers to your girlfriend, you can easily do this with Send
eFlowers using your device. This app is among the best
Valentine's Day iPad apps available in the App Store.

2. Creative Romantic Ideas

If you are looking for something different, here's
one of the most romantic Valentine's Day iPad apps that might
give you some fresh ideas to take your love's breath away. The
good thing is that the app provides the ideas suitable for all
budgets, so you shouldn't worry about money.

3. Valentine's Day Recipes

Probably everyone tries to make a Valentine dinner
special. Fortunately there is an app that can help you to do
this. This is surely one of the coolest Valentine's Day iPad apps
that will help you to cook a tasty dinner for your
sweetheart.

What if you have some DVD movies you want to enjoy on the iPad 3? This article explains you about how to rip and convert DVD to iPad 3 so that you can play your favorite DVDs on iPad3 easily. In terms of video/audio playback, there should be no much difference between iPad 2 and iPad 3. Apple's devices always support MP4 formats. So if you want to watch DVD movies on iPad 3, you will need to convert DVD to iPad 3 supported MP4 formats. We use a dvd ripper which is one of the best and most professional DVD to iPad 3 converter.

Firstly, free download and install this software to
computer. Then choose the "DVD to iPad" button to open
dvd
to ipad converter.

Secondly, just hit "Load DVD" to import DVD from
your DVD ROM or DVD folder that you saved on Hard Drive.

Thirdly, hit a suitable video format for iPad 3 in
"Profile"drop down listing and preset the output destination by
clicking "Output".

Finally, just fire up the process through clicking
"Convert".

This article will show different ways you can
download free iPhone 4 movies downloaded to your iPhone 4 or iPod
touch without breaking the bank.

1. Locate free downloadable movies. There are
several ways to download free videos over the internet. Many of
these methods are either dangerous (can make your PC susceptible
to viruses) or illegal. However, there are various legal ways to
download free videos. You can find free downloads via the iTunes
music store by choosing the free download category. You can also
find services that charge a one-time fee for unlimited downloads.
Finally, you can also locate free downloadable moves from
bit-torrent sites, which are peer-to-peer sharing programs. This
method, however, is not recommended.

2. Download free movies. Once you have located a
source to download your movie, simply download it and save it to
a folder in your hard drive. It is recommended that you create a
folder so that it will be easy to maintain and organize your
files if you choose to download multiple movies.

If iPhone 4 can't play the downloadable movies, you
need

rip

In the app world, phones get all the love-but what about the millions of iPod touch owners out there? We've got the same top-notch iOS operating system, and access to most of the same apps, but our needs are very different. For an app to be a must-have for the iPod touch, it needs to hit one of the following criteria: It should work well online and offline, since Wi-Fi isn't as widely available as an always-on cell connection. It should be fun, since entertainment is the iPod touch's first job. Here, music, movies, and games trump productivity. If you can't watch DVDs on iPod touch, the ipod touch converter can convert dvd to ipod touch video formats. That's not to say, though, that there aren't some great apps to help you get your work done. Lastly, it should either add a new feature to the touch, or make it do something even better-like make phone calls, for instance.

The simplest way to get free iPod touch apps is
very easy, you just need to type "Free iPod touch apps" or
something related to it in your search engine such as Google,
yahoo etc. the search engine will display thousands of websites
that give you the option to enjoy downloading free iPod touch
apps. You can select any appropriate website that suits you best
and simple browse through it and get as many free iPod touch apps
as you want. Internet is the simplest way to get free iPod touch
apps since these iPod touch apps are virtual so they cannot be
purchased from any physical store you have to download them
through internet.

Free iPod touch apps can be very useful too, since
the apps are about anything and everything. Once you start
browsing more and more apps from the internet you will find some
amazing
free
apps for ipod touch such as Skype which is the best mean of
communication these days, you can even get apps to maintain your
physical fitness, not only this but to keep track of your daily
routine you can download free iPod touch apps that can actually
help you do it.

iPad is the latest PC tablet released by Apple, which has several unique and inventive features that makes iPad different from other contemporary tablet PC's. It can store huge mass of data including audio, video, image files, messages, web content etc. It is great for listening music, reading books, playing games, watching movies.

iPad can easily get synchronized with PC through iTunes. But to transfer data faster from iPad to PC by using iTunes, which is not a good option because iTunes provides incomplete data transfer and it is not very fast as well. If you want to whole data transfer. You need to select effective software which will easily transfer the data such as music, videos, movies, images etc in fast and simple manner.

Step1: Run

ipad to computer

(

ipad to mac transfer

), and connect your iPad/iPod/iPhone to your
computer via USB cable. After done, the iPad/iPod/iPhone icon and
its library and playlists will appear in the Device
list.

Step2: Open the library/playlist that you want to
export files, and then check the file(s) you want to export in
the file list.

Step3: Click

ipad to pc transfer

to select the destination of the exporting files
and start exporting files to Computer. Click to itunes to select
the destination of the exporting files and start exporting files
to iTunes. You could also choose the Export to local option from
the Actions menu, and then export the files from your
iPad/iPod/iPhone to actual device.

iPod touch devices that use iOS 4.0 support the use
of application folders. You can use folders to group all of your
games, productivity software, browsers and social networking apps
in their own categories so that you can access apps more easily.
Folders also declutter the iPod's "Home" screen and can hold up
to 12 apps per folder.

Step 1

Press down on the application you want to put in a
folder until the app's icon wiggles and displays an "X" in the
left corner.

Step 2

Drag the app and drop it on top of another app that
you want to place in the folder. Your iPod will create a folder
for both the applications. It will automatically assign a
contextual name for the folder, which you can choose to change.
Press the "Home" button to return to the list of apps.

Step 3

Drag other apps and drop them on the newly created
folder to add them to the folder.

As we all know that there is a gap between the
Apple Company and the Adobe Flash. We will see lots of news and
arguments of Apple Company and Adobe flash, these two companies
seems to have a lot of resentments. Just because of this reason,
we can not play the Flash videos on Apple devices besides the
latest iPad 2! Therefore, we can often see the attendant
question, which is,
how
to play flash video on ipad or other Apple devices. I think
all of us really hope that one day Apple devices will support
playing Flash videos or one day the resentments between these two
companies will be resolved!

This helping had comes in the form of the jailbreak
app named Frash. This app will allow Flash Videos to be watched
on there iPads. It appears this will work only on a jailbroken
iPad.

"Frash is able to run almost
all Flash programs natively in the MobileSafari browser,"
said Comex, which also created the Spirit untethered jailbreak
tool for the iPhone, iPad and iPod touch, in the
description for the YouTube video created to show the hack in
action.

It seems odd to think of playing DVD movies on your
Zune HD, but that's exactly what a DVD to Zune HD converter is
designed for. Usually it can help you rip and convert DVD movies
to Zune HD supported format such as MP4. However, when you want
to enjoy the DVD movies in full screen on your Zune HD, the DVD
movies usually come with the black bars. Can the DVD to Zune
converter remove the black bars on the top and bottom of the
movies?

The
dvd ripper free in the
market is just the ideal program that helps you resolve these
problems. It not only can
convert
DVD to Zune video or audio format, but also boast more
functions than that, such as crop the black bars from DVD movies,
merge multiple clips into large one, apply special effects, add
watermarks, etc.

Step 1. Import DVD movies

Insert the DVD disc into the disc drive, click the
"Open DVD" button to import it. Or if the DVD movie is saved as a
folder on your computer, you need to click the "Add Video" button
to locate that folder, which is composed of two separate folders:
VIDEO_TS and AUDIO_TS. From the VIDEO_TS folder, select the .vob
file to import and then click "OK".

Step 2. Choose Output Format

In the drop-down list of "Profile", navigate to
"Zune" subcategory and choose the most appropriate profile as the
output format.

Step 3. Start converting DVD to Zune HD and
transferring DVD to Zune HD

Now you can click the "Start Encode" button to
start converting DVD to Zune HD.

With the sharpest, most vibrant, and
highest-resolution display screen, we have to admit Apple iPhone
4 is another great player for Apple lovers after the release of
iPad. iPhone 4 owns a marvelous 960-by-640 resolution in a

3.5-inch screen, which makes it a more gorgeous to enjoy movies and videos. But there are tons of different video formats in the market, do you know what video or movie format will your iPhone 4 support? How to put
video to iphone
4?

MP3

The most common format for sharing songs and other audio is the MP3 format. MP3 files are compressed versions of an original audio track that remove inaudible portions of the composition to save space.

AAC

Files in the Advanced Audio Coding (AAC) format are the default audio format that Apple uses for its iTunes online music store, which provides the majority of the paid audio content to users of the iPod and iPhone.

Other Formats

The iPhone 4 also supports the Apple Lossless audio format, which attempts to provide music in the way the artist intended with zero quality lost from the original recording. These files are very large and are typically used by music aficionados or those that are major fans of a particular artist.

Since iPods are basically big hard drives with
special software and a screen, the hard drive in your iPod needs
to be formatted. Formatting is essentially the process of
prepping the drive to talk to the computer it connects to.

Step 1

Download and install the latest version of iTunes.
If you already have iTunes installed on your computer, update it

by clicking the "Help" menu and selecting "Check for Updates."

Step 2

Connect the Mac iPod to your Windows-based PC while iTunes is running. iTunes displays a message explaining it has detected an iPod formatted for Mac computers, and you must restore the iPod before you will be able to use it in Windows. Click "OK."

Step 3

Click the iPod in the blue column on the side of the iTunes application, and then click the "Restore" button in the main area of the window. iTunes formats the storage on the iPod to work with Windows. During this process, use the meter displayed on the screen to track the progress. When the format operation is complete, the iPod reboots and iTunes detects it again. You may now proceed with configuring the iPod to synchronize with your Windows-based PC.

The other day, when I was searching on the
Internet, I found some people asking questions about reading
PDF files on New iPad, some questions goes like this:

"The iBooks application looks great, but I can't
see anywhere whether or not it reads PDFs in the same way as it
does ePub-formatted eBooks. Is this information available
yet?"

In fact, the iBooks app will probably only use
ePub. Then you don't need to load PDF on New iPad via e-mail
attachment in Mail app. While it's not a good reading experience
of PDF content because it is not as much reflowable or smooth as
ePub format on iPad. And you need to update iBook or
iTunes.

There are many programs to let you convert PDF to
ePub so that you can read PDF on New iPad freely. Here we
recommend you PDF to ePub Converter, a fantastic PDF to EPUB

converting program, specially designed for Windows users, converts PDF to EPUB eBooks for iPad within a few seconds. Meanwhile, it is very easy to handle. Barely two or three steps can finish all the job.

Audiobooks are a great way to pass time while you're traveling or for experiencing literature if you don't have time to read books, but they are often several hours long and take up lots of space on your iPod. You will most likely find yourself needing to remove old audiobooks so you can fit new ones on your iPod.

Step 1

Plug your iPod into a USB port on your computer. iTunes should automatically open. If it doesn't, open it from the "Applications" folder on a Mac or from the "Start" menu on a Windows PC.

Step 2

Click on your iPod in the "Devices" list in the

left side-panel in iTunes. Tick the check box next to "Manually
Manage Music and Videos" and click "Apply" in the bottom-right
corner.

Step 3

Click on "Books" underneath your iPod in the
"Devices" list.

Step 4

Highlight the audiobook that you want to delete
from your iPod. To highlight more than one audiobook at once,
hold down "Ctrl" on a Windows PC or "Cmd" on a Mac and click on
all of the audiobooks you want to highlight.

Step 5

Click on "Edit" in the menu bar at the top of your
screen and choose "Delete." Your audiobook has now been deleted
from your iPod but is still stored in your iTunes library.

There are many thousands of apps available. (As Apple's advertising campaign says, "There's an app for that.") But some apps are simply must-haves--whether for their functionality, interface brilliance, or sheer entertainment factor.

Reeder

Reeder is a $5 RSS reader, and if you're not yet on the RSS bandwagon, you should be. The app, which syncs via Google Reader, presents a gloriously elegant interface for reading the latest articles from your favorite Websites.

Tweetbot

Tweetbot began life as an excellent Twitter client
for the iPhone, and the iPad version is even better. The $3 app's
unique interface and brilliantly implemented gesture support make
it not just a powerful app for reading and posting tweets, but a
fun one, too.

Flipboard

Flipboard takes content you're interested in and
presents it in an impressive magazine-inspired layout. The free
app connects to your Facebook, Twitter, and Google Reader feeds,
and also offers a variety of curated feeds in various categories
like politics, technology, and entertainment.

CNN

Other news apps exist, but no free news app offers
quite the polish of CNN on the iPad. The app combines videos and
cleanly displayed articles to keep you abreast of all the news
that's fit to consume.

Dropbox

Dropbox, a free Web service, lets you create a
folder on your Mac that syncs automatically with whatever other
computers you tell it to.

Copy Content to New Computer

Normal
0

7.8 ???
0
2

false
false
false

MicrosoftInternetExplorer4

When you purchase a new computer, one of your
priorities may be to copy over all your iPod music. If you are a
frequent iPod user, you may even have pictures, videos or other
files on your iPod that you will wish to
copy
ipod to pc. A passing familiarity with iTunes and iPods will
leave you aware that syncing your iPod with iTunes on your new
computer will not have the desired effect. Doing so will leave
both your iPod and iTunes empty.

Step 1

Click the "Start" button on your new computer and
then "Control Panel." This opens a new window. Click "Show Hidden
Files and Folders" in the "Folders" section, and then click "Show
hidden files, folders and drives." Click "Apply" >
"OK."

Step 2

Open iTunes, and then plug your iPod into your new
computer. Click the "Cancel" button when iTunes asks whether you
wish to sync your iPod with this computer. Find and click your
iPod name where it is listed in the "Devices" section of iTunes'
left panel. Click the "Summary" tab, and then "Manually manage
music and videos" > "Enable disk use." Click "OK" in the box
that opens for each of these options, and then click
"Apply."

Step 3

Click "Start" > "Computer." Find your iPod in
the list of drives, and then double-click on it. This displays
folders containing everything on your iPod, including a
"Contacts" folder and a "Photos" folder.

Step 4

Right-click on any folder or file you wish to
transfer
files from ipod to computer. Select "Copy" from the list that
appears, and then right-click in the area of your new computer to
which you wish to copy the folder or file. Right-click again and
select "Paste." Repeat this step for each folder or file you wish
to copy. To get to your music, double-click the "iPod_Control"
folder and find the music folder inside.

9to5 Mac received the above image from a tipster
located in Orlando, FL. The advertisement indicates both the 16GB
and 32GB iPhone 4S models are available for $174.99, and $274.99.
The $25 mark down applies to the 8GB iPhone 4 as well, which can
be had for $74.99.

Targets in Southwest Michigan don't appear to be running
the same promotion, but that could be as much employees not
caring to take the time to check. Still, the deal appears to be
going on in Orlando till the end of the month. With 37 million

iPhone 4Ss sold already I can't imagine retailers are sitting on massive amounts of inventory they need to push, which is why the Target deal is somewhat surprising.

Although, the recent release of the new iPad has spurred price cuts of the iPad 2 with numerous locations selling one or more models cheaper than the already reduced prices. Micro Center has the iPad 2 16GB Wi-Fi model for $359.99 which is $40 cheaper than the recently reduced price of $400.

The iPod Touch is a handheld multimedia device that
allows users to connect to the Internet, play games, play music,
watch and record high-definition video (720p) and communicate to

fellow iPod Touch and iPhone 4 users via a Wi-Fi network connection (on-board camera and FaceTime features are available on 4th generation and later models) . The iPod Touch also features Bluetooth connectivity, allowing you to connect numerous Bluetooth devices including a headset or keyboard. Downloading games to your iPod Touch can be done using one of the two simple methods for app transfer and installation.

Step 1

Open iTunes on your computer and download the game you wish to purchase.

Step 2

Connect your iPod Touch to your computer using the included USB cable.

Step 3

Click on the iPod Touch device icon in the left-hand column of iTunes. This will sync your iPod Touch to your computer.

Step 4

Select the "Apps" tab in the iTunes menu and click on "Sync Apps."

Step 5

Choose the game applications you downloaded by clicking on the checkbox next to the icon. Click "Sync." This will transfer the game to your iPod Touch and install it. Once this is complete, the game icon will appear on your iPod Touch menu.

The iPhone 3 and iPhone 4 are cellular phones that
are capable of sending and receiving phone calls, but they also
can run applications and connect to the Internet. A headset can
be plugged into the iPhone to enable private listening when
desired. During situations that require silence, such as in a
movie theater or meeting, the iPhone can be put in a silent mode
that disables the ringing sound. If you forget to turn on the
silent mode, a call's ring can be silenced quickly with one
button.

Step 1

Press the "Home" button on the bottom of the iPhone
to turn the screen on. Slide to unlock if necessary.

Step 2

Tap the "Settings" icon and choose "Sounds."

Step 3

Slide the On/Off switch to "Off" under the Silent
heading to turn off vibrate completely if desired.

Step 4

Slide the On/Off switch to "Off" under the Ring
heading to turn off vibrate when receiving an incoming call.
Slide the volume slider all the way to the left to turn the
ringtone down all the way.

Android and iOS are surely IN now a day and people love to know about daily updates and apps of their choice. But it is a general routine that people mostly look for entertaining apps and due to the advanced graphics and efficiencies the gaming apps are offering, they mostly don't go for anything providing knowledge. Gaming is becoming more and more advanced so the hot trends and blogs are overloaded with gaming news, cheats, reviews and rumors. Today we are going to introduce you with a quite new and different application which offers something based on history

and is definitely an eye-opening app.

Complementing the TITANIC miniseries the TITANIC
iPad app creates a unique integrated experience for fans of the
series and amateur historians alike.

The aim of the app is to extend the experience of
the show into the hands of the audience, allowing them to dig
deeper into the story and characters they love while accessing
extra exclusive content and learning about the historical
background behind the stories.

The interactive TITANIC app consists of a
three-part immersive journey that reveals the complexity of the
tragic story, while enlightening and educating users about this
hauntingly avoidable catastrophe. This digital triptych enables
users to investigate, challenge, and relive some of the key
decisions and turning points of the ship's history. Each section
presents a unique immersive perspective on the timeless story of
Titanic.

The iPhone is a cell phone manufactured by Apple that plays music, shoots pictures and videos and can connect to the Internet over cell phone data networks and Wi-Fi. The iPhone can also run "apps" or applications. Each application must load in the iPhone's memory before you can use it. If too many memory-intensive apps are running at the same time, one or more of the applications may shut down without warning.

The iPhone 4 has 512 megabytes of random access memory (RAM), which is where applications load and run. This memory is separate from the phone's storage capacity, which holds music, videos, pictures and apps. The iPhone 4 comes with either 16 or 32 gigabytes of this system memory. Certain apps can consume greater amounts of memory as you use them. For example, the Safari web browser can open up to eight pages at once. If these multiple open pages require a lot of memory, another application, such as music or video playback with the iPod app, may suddenly close down.

I think the iPhone 4 is a great piece of IT engineering. Unfortunately, it was released at a time when hand held engineering marvels are becoming something of a commonality, what with Samsung, Nokia and other competitors offering their own top notch phones. For this reason, the iPhone 4 just didn't make such a big splash in sales.

1.
Facetime calling:
Facetime, though very well received, yet the hassle of it working over only an active Wi-Fi hotspot is a problem. iPhone 5 is rumored to be featuring Facetime support over cellular services.

2.
Dual Power: every new
smartphone being launched is offering a dual-core processor.
Apple acquired PA Semiconductors last year, and a very possibly
hint at a new dual-core architecture compared to the A4 single
core architecture on the iPhone 4.

3.
Say cheese: Sony is said
to be manufacturing a 8-megapixel for the 5th generation of the
iPhone, while the iPhone 4 has a 5-megapixel camera with LED
flash.

4.
HD support: the iPhone 4
supports true 720p HD recording. The iPhone 5 is rumored to be
having full 1080p support, with a micro-HDMI output on the
side.

5.
NFC enabled: Rumor has
it that the next-gen iPhone 5 will act as a Near Field
Communications device, and thus may be acting as your payment
device, or a car key.

"Cube" is a first person shooter designed for
Apple's iPod Touch portable device. Like all first person
shooters, you see through the eyes of your character and fire
virtual guns at enemies on screen. In addition to an offline
single player mode, Cube allows you to use your iPod Touch's
wireless Internet connection to play against other real live
players all over the world.

Step 1

Press the home button on your iPod Touch to exit
the "Settings" application and return to your main menu.

Step 2

Tap "Cube" to launch the Cube game on your iPod
Touch. If you don't already have Cube, you can download it in the
iTunes Store by selecting the "App Store" icon from your iPod
Touch's menu.

Step 3

Select "Online" from the menu. This will start an
online multiplayer session in Cube on your iPod Touch.

The all-new Kindle Fire adds the ability to watch

movies, which broke through the Amazon Kindle's previous
tradition to only read eBooks. With its Wi-Fi connected, we can
watch movies, TV shows online. But what shall we do if we want to
watch movies with no access to connect to Wi-Fi? For those who
have already bought a lot of DVD collections will find that
rip
dvd to kindle fire supported MP4 format is one of the best
solutions to save money.

1. Load DVD Source

Suppose you have downloaded this professional
dvd to kindle fire
converter and have it installed onto your computer, open it.
Select "Load DVD" tab on the top tool bar to import your DVD
movies to the program. (Make sure you have inserted the DVD disc
into your DVD drive.) Besides, you can also load DVD Folder, ISO
Files and IFO files, as per your need.

2. Select Output Formats

Click on "Profile" button and from the drop-down
menu, you may select the targeted output format for your Kindle
Fire. In case you are not sure, MP4 works perfectly on Kindle
Fire.

3. Rip & Convert DVD to Kindle Fire

Before the final click, you can choose "Subtitle"
and "Audio Track" according to your need. Once done with all
settings, click on "Start" button on the right lower corner to

start the DVD to Kindle Fire conversion.

Kindle Fire maybe the most striking tablet of Amazon. It is likely to be the first successful tablet not sold by Apple, and there are several good reasons for it: the low price of $199, the convenient, portable size of 7 inches, and a rich catalog of books, movies and music offered through Amazon's Web-based services.

1. Download this dvd to kindle fire.It's an excellent software which can convert DVD to Kindle Fire.

2. Load DVD movies to this best

dvd
to kindle fire converter.The DVD to Kindle Fire converter
supports loading DVD movies in flexible methods. Besides loading
the entire disc from DVD-Rom, you can convert DVD IFO to Kindle
Fire and convert DVD folders to Kindle Fire.

3. Click the profile column and
choose Android> Android MP4 Video (*.mp4) for
output.

4. Edit function is useful and convenient
in Kindle Fire DVD Converter. After loading DVD files, you
can use these functions below before download movies to Kindle
Fire.

5. Rip DVD movies to Kindle Fire MP4.Click convert
button to start. The DVD movies to Kindle Fire
converter will convert DVD videos to Kindle Fire for you
with the best quality.

If you own a Kindle Fire, then you know it's really
easy to watch video you rented or purchased from Amazon using the
video tab on the home page. But how do you watch your own
videos?

First, get a micro-USB cable (the one on the left
below). Amazon should have included one in the box, but they
didn't. You can buy them inexpensively online.

Connect your Kindle Fire to the computer using your
micro-USB cable. It will go into a special mode that doesn't let
you use the Fire until you tap the Disconnect button.

You will see the Fire in Mac OS X Finder or Windows
Explorer as a storage device.

Drag the video from your computer to the Videos
folder on your Fire.
