The system iOS 5 will bring many improvements to the ipad

According to foreign media reports, when people still indulge in the unlimited ipad that was adopt with iOS 4.2 system last year, this week Apple released the latest generation of Apple's operating system iOS 5. However, what does the new operating system iOS 5 mean for the ipad? The iOS 4.2 system has introduced many new functions, such as multitasking, AirPrint (can support the direct connection with compatible printer file to ipad), Folders (file management tool), AirPlay (wireless technology), Game Center, multiple threads to send e-mail and so on. However, these functions did not truly change the use of the ipad, even its compatibility is not very well, for example, we cannot transfer mpeg to ipad directly, for we all know that the ipad only can support mov file and mp4 format. The release of iOS 5 likes a heavy hammer for the tablet computer ipad and once again subverts innovation, which is opening the new use of the ipad and also enhance the links between different Apple products, including iPhone, iPod touch and Apple TV and so on.

Support the installation of iOS 5 It is gratifying that Apple did not forget its old users, not only can the latest equipment install the latest version of the system, iPad 2, an earlier version of the iPad, both of them can support the installation of iOS 5, not to mention the iPhone 3GS, the first three generations and a fourth-generation iPod touch. To updating the software needs to put the ipad to connect with the computer via the data cable and through iTunes to receive synchronously. After installing iOS 5, it will no longer need to connect with the computer USB synchronously. A major feature of iOS 5 is to upgrade software and sync information by the wireless network. Apple calls this feature is "out of the computer." Primary characteristics After installing iOS 5 on the ipad, you will first notice the new three icons on the screen: iMessage (instant communication), Newsstand (newspapers and magazines), Reminders (reminders). Apple gives the iOS devices users a real-time information solution by using iMessage, including the iPad, iPod and so on. With this feature, users can send messages to iPhone users by using the ipad. You can also share real-time text, photos or Screen. If you are sharing of this information through the wireless network, it is free. If it is 3G users, operators will charge a traffic fee. Application Notification Center The previous notification is whether you are using a mobile phone to do something, it will immediately notify to

you by the form of pop-up window, which take screen-style aggression. This approach does not come back again. Of course, if you still want to keep this approach, you can change it in the settings. The iCloud provides a service not provided by other devices: it automatically backs up your data and settings, including camera settings, accounts, files, applications, and media buying. Therefore, if the iPad was lost, your data will be safely stored in the Apple iCloud. Summary iOS 5 is a significant update for the ipad that I .The upgrade of iOS 4(AirPlay, AirPrint, Game Center) is only "on paper", has never been used on our daily life. In contrast, the wireless synchronization of iCloud is about to change our habits, "the air operating system update" will soon become a reality.

Though iOS 5system brought a lot of improvements, some problems still not be solved as the same as the iOS 4.2 system, such as how to

convert

rmvb to ipad this simple converting problem still exists.

Rumors that Apple iPad mini will use 7.85 inches screen

Beijing October 18 early morning news, according to Taiwan's "Economic Daily" reported that Apple iPad mini tablet computer will use 7.85 inches display panel that is as the same as the resolution of the iPad 2 from the upstream component suppliers. It is expected to ship in the first half of next year. AUO is currently the only panel makers that provides this panel in Taiwan, touch components are fulfilled directly from Apple's largest supplier âTPK, the touch IC substrates are made by Kinsus.
In addition to AUO, the South Korea's LG has also sent samples of panel to Apple. The LCD flat issues of technology (ASVS) by developed AUO have been resolved. CMO is also actively bidding for the iPad mini panel supplier. However, because of patent reasons, industry analysts believe that Samsung has exited. Amazon launched the low-cost tablet computer Kindle Fire, which led to large-scale "price war" in the tablet computer market. For this reason, Apple will launch iPad mini to respond to the challenges of the Amazon. More importantly, the iPad mini is aimed at emerging markets, particularly the mainland market, consumers go crazy for Apple

products, but for the tariffs is very high, which makes Apple products expensive. The iPad mini is expected to help Apple expand market share in mainland China. Just as the ipad 2, though it has some shortcomings, such as

rip

dvd to ipad for mac this simple operation can be not finished, Apple fans have never lost enthusiasm for the ipad.

People in the industry, said that the panel size of iPad mini is 7.85 inches, its resolution is the same as the 9.7 inches iPad 2. As the iPad mini size is smaller, but the resolution per unit area actually increased 52%, the quality will become more HD. And with a lower price, iPad mini is expected to be hot in emerging markets. The touch-IC of the iPad mini is supplied by Broadcom, however, IC substrate is provided by Kinsus. Broadcom accounted for about the 12% revenue share of Kinsus in the third quarter. For the IC lead time required half of year, so Kinsus has been added iPad mini order in the fourth quarter. In addition, the radio frequency (RF) modules of iPhone 4S were supplied by the Skywork. Skywork has won over 80% of orders for Apple's RF modules, and more than 80% of these orders are outsourced to Kinsus. Due to recently iPhone 4S is on sale, Skywork chases orders to Kinsus urgently, which made Kinsus spending to hit a new high in fourth quarter revenue.

Besides, the market research firm Ticonderoga Securities analyst Brian White said earlier that Apple will launch iPad mini in the first few months of next year. What are your expectations for the coming ipad mini? For me, I hope the new ipad mini can support many common video formats, so we do not need a

dvd to

ipad ripper any more.

The tablet computer market will continue to be keen

Microsoft released a new generation of desktop operating systems Windows8 in Build2011 Developers Conference on September 14, 2011.And also started the download of the developer version. Almost simultaneously, under the Microsoft company, WindowsPhone7.5, after six months of publicity, was also introduced officially. However, in early October, Apple released a new iPhone4s phone. In the

tablet computer field, Amazon released a cheap tablet computer on September 29, while Microsoft's Windows8 system will support largely the tablet computer device. All this shows that the major IT companies are taking a variety of ways, to desperate fight for access to the Internet terminal in this huge market. As is shown by statistics from the largest Chinese Internet service providers CNZZ that the Windows series of operating systems of the domestic Internet user population accounted for 97.63% in the gross domestic end-use of all Internet population in the third quarter of 2011, even the percentage of the overall page views is as high as 97.80%. Among these dates, the utilization and share of Windows XP system is the highest one. After 8 years of using, it was still used by more than 80% of Chinese Internet users. However, the performance of Windows Vista is not very good. Microsoft learned from their mistakes and released the popular Windows7 in 2009, the current share and occupancy rate reached 14.15% and 13.63% now. The published Windows8 can be successfully compatible with Windows Vista and Windows7.

In the mobile terminal, the Nokia Symbian smart phone still accounted for the highest share at home and abroad. The share of Symbian phones is still as high as 45.73% in the domestic smart phone market in September 2011, but this old system continues to decline in the area of the smart phone market share. Apple's iPhone accounted for the share of 19.95% in the domestic smart phone market. But it needs to be emphasized is that iPhone is selling at a high price to reach the share, which indicated that iPhone has a great advantage in high-end smart phones. In order to compete with the iPhone, Google has launched Android smart phone operating system. Currently, it has occupied more than 1 / 4 share the domestic smart phone market. In tablet computer market, the series of iPad tablet computer plays a leading role, its market share accounted for 96.55% in September. Though the ipad also has some shortcomings, for example, the most obvious shortcoming is that many common video formats can be not supported by it, such as convert
rmvb to ipad this converting function can not be finished. Besides, some disc-based formats also can not be played on the ipad, even then, there are many people want to buy an ipad, for they think this is small question and can solve it easily by using a
dvd to
ipad ripper. However, Android camp is also unwilling to lag behind naturally, quickly launched similar products to compete with the iPad. However, so far there has no in full range of product can compete with the iPad. However, Android tablet computer has the

same advantages as the smart phones. Specifically, the high low-end product line is rich and enough to attract attention of users of different levels of consumption.

For tablet computer devices, the mainstream consumers are not prepared to pay for it that the price is more than the price of mainstream notebooks. Only the product price falls to as the price as the traditional mobile entertainment products, such as PSP, iPod Touch, NDS, etc, the tablet computer devices can really open the post-PC era. In fact, in late September, Lenovo and Amazon have launched a thousand-level tablet computer, the price of the tablet computer will be expected to have a greater degree of decline.

Comprehensive Analysis of Android Tablet Computer

Now, in the tablet computer market, besides the ipad, there are all kinds of the tablet computers, for example, Android tablet computer. So the users can buy more Pad models. Most importantly, Android tablet computer is reducing price, even want to shake the iPad at a low price. The following breakdown of what we have come to that is the active Android tablet computer. Disadvantages: Performance is not outstanding The most shocking Android tablet computer Lenovo Le Pad A1 Selling Points: Price from thousand Yuan Disadvantages: Performance is not outstanding Le Pad A1 is an absolutely spoiler, before the launch of it, the major PC manufacturers all introduced the tablet computers to put the Apple iPad pricing as a benchmark, the performance level of design beauty and ugliness are both priced around 3,500 yuan, but the price of Le Pad A1 is selling from 1000 yuan. For its low price, so the performance is not good, it has the same shortcomings as the ipad, we all know that ipad can support move file and mp4, if you want play other video formats on ipad, we often use a
best
converter for ipad. Of course, Le Pad A1 is no exception. The appearance of this 7-inch small Le Pad A1 has a variety of colors, which is designed for the fashion-based users. It is adopted with Android 2.3 operating system and a 1GHz single-core processor, its performance is the entry level, which is in the basic Android application to meet the basic level. Considering its low price, the users who has less demanding for performance is worthy of

recommendation.

Most business ThinkPad Tablet Selling point: Handwritten + card + video output Disadvantages: it is more cost effective to buy in Hong Kong Are you fed up with the iPadâs attitude that is not to seek work, just entertainment? ThinkPad Tablet should arouse the concern of many business people. The first ThinkPad Tablet owns a number of business capabilities: stylus input, HDMI video output for convenient presentation, three in one card reader slot, and even there is a standard USB interface allows you to drive an external mouse and U! The brightest Samsung Galaxy Tab Selling point: called spike iPad2 Disadvantages: the price is a little expensive The Body is thinner than iPad2, its hardware performance is stronger than iPad2. Samsung GalaxyTab II is listed in such a posture, the price naturally is also putting iPad2 as a benchmark: for example, the 16GBWifi version, 10.1-inch P7510 is l priced at 3688 yuan, recently just launched 8.9-inch P7310 model is also priced at 3688 yuan. However, the actual sales price of the latter can be as low as 3288 yuan or so, which depends on the ability of buyers to bargain. If you do not like 10.1 inches tablet computer by a hand, 8.9-inch P7310 is a quite eclectic model. The most beautiful Sony Tablet Selling point: books style, refused to monotonous Disadvantages: tight supply Are you fed up with all the Tablet PC is upright in the tablet computer market? Sony Tablet will let you brighten. It used books-style exterior design to make you feel more comfortable, even you never feel tired to hold it by a single hand for a long time. In addition, Sony Tablet can connect with TV, audio, Blu-ray players and other audio and video devices, for example, it is different from the ipad, for such as

convert

avi to ipad this simple operation can not be finished, Sony Tablet can support all kinds of video converting.It also can play as a variety of smart home devices conductor core by infrared remote control applications. The multi-point tablet computer with a 9.4 inches touch screen, has used Android 3.2 operating system and Tegra2 processor, 5. There are 16GB and 32GB versions, which is currently priced at s 3688 yuan and 4488 yuan each.

Who can reverse the era of Apple

After Apple iPad triggered the new upsurge of the tablet computer, the momentum of Android system tablet computer industry is high, the operating system is adjust from a 1.5 to 3.0 honeycomb, although operating experience and capabilities are gradually gaining ground, it always attracts consumers by a flashy appearance. For the traditional PC vendors, to design an attractive appearance of a tablet computer is not difficult, compared to the emerging mobile Internet era, the development of software in general is short flat board. A good example can illustrate this problem: cellular system tablet computer that provides task management interface can not be closed. If the users want to completely shut down an application, and often use third-party software to complete, but a few products could install such task management software. It is obvious that system vendors push the responsibility of use experience to the third-party software developers, the flat-panel manufacturers are pushing to the user. Compared to Android tablet computer that the operating system is not perfect, the performance of the X86 architecture product that has mature software market and platform is much better. Tablet computer Windows system can be said that is the ancestor of the tablet computer. Whether it is IBM's ThinkPad, or HTC's dual system monster, or Pocket PC PDA ... ... no doubt, from the technology accumulation and application maturity, Windows Tablet computer will not lose any other platform of flat products.

For example, 3Gnet M7 Tablet PC is very hot at this stage of the tablet computer, which is adopted with Windows7 operating system and positioning it to business tablet computer. It has 7-inch multi-touch- color, an Intel ultra low-power processors, high-speed SSD solid state drive, Wi-Fi wireless, 3G, Bluetooth ... ... and so on readily available. In addition, it also built-in GPS navigation module, supports GPS navigation, which is truly consider for business travel groups, from a practical point of view, as the ads in general, it is only change for business elite. With the latest technology and the most completed hardware, it is to achieve the most comprehensive expression. Surfing, Offcie Office, E-mail, the original handwriting, stocks, online banking, 1080P high-definition movies, lossless music formats, Flash video and games ... ... It is worth noting that Windows Tablet computer does not need a dvd to ipad converter for mac like the ipad, it not only can support flash format, but also many other common video formats, such as avi,flv,rm and so on. Even it can show you how to watch tv shows on ipad. In a word, its performance is nearly the same as the desktop computer. Besides the application is the

same as notebook and desktop computers, the number can only be endless, the stream continues to describe. After six months of 2011 of ups and downs, the second half of the market will pay more attention to user experience, rather than cool style in the past. Even the best computers, if it is not really something to attract customers, like a bowl of noodles, there is no good halogen or soup, tasteless. For the tablet computer, the halogen or soup is consumption of content, which is we are often to use applications and practical habits in daily life. Though Windows Tablet does not particularly focus on entertainment applications, generally speaking, it is considered on the real computer, which in line with universal practical habits.

Although Apple has described as overbearing intellectual property, mature software system, abundant cash reserves, Steve Jobsâ departure will definitely cause irreparable flawed to apple in the future. Whether it is Google camp, or the Microsoft camp, if they really want to bring in the market reversal, the strength is the key!

Can the Tablet Computer Replace the Notebook

Along with the tablet computer is more and more universal, in addition to the launch of the generation and second generation iPad, Samsung, Motorola, HP, Dell, as well as domestic Lenovo, Acer, Asus have launched their own products, some of them are 9-10 inches, some of them are 7 inches small flat computer. Before I worked on every day and participated in conference with a laptop, now I am carrying with the tablet computer, and this make my bag less heavy.

Can the tablet computer replace the notebook? Can the tablet computer replace the notebook? This is a very tangled topic for people. I had had a long debate with the industry Bo Bin. I think the notebook will be replaced the tablet computer, for the tablet computer can be used as cell phones and has long standby time, it can completely replace the Notebook. However, Bo Bin has been less optimistic about the flat panel market, he thought that it is very hard to replace notebook, because when you deal with the office affairs, you need the keyboard, which is precisely the weakness of

the tablet computer. This view from Wang Bin is reasonable, I use the iPad to replace the notebook and I must carry a Bluetooth keyboard, what is more, there are many differences between the iPad and Windows in processing documents. It is unaccustomed to use indeed. Besides, compared with the document formats of PC, the iPad is grossly deficient. The document processing software is often to bother us. What is worse, the ipad only can support mov and mp4 formats, other many video formats can not be played on it, if you want to do like this, the best way is to use a

dvd to ipad for mac

converter. With it, you can not only convert many common video formats, but also you can

rip

dvd to ipad for mac, even so, but this still is a serious problem for ipad users.

For discussion of the results, Wang Bin and I have done a compromise, His point change into that the tablet computer will integrate with notebook computer, but the former can not replace the latter; and my view is that the tablet computer will appear the form of notebook, with the popularity of this integration of new products, the notebook will be replaced eventually. We still have differences, the pigheaded Bin still do not value the tablet computer. Will the board replace the notebook? What kind of the tablet computer will replace the laptop? I give it a name - "the board", which can be used as the tablet computer and also as a notebook with the tablet computer. In fact, there have been numerous such products, such as Acer's Iconia TAB W500, Lenovo Asus Eeepad, these tablet computers have a similar shape with the iPad, but they added the keyboard base that can be use at any time, and also it is convenient for personal carry, that are the dual-mode devices, which I call "the board."

Apple is now really under great pressure from outside

According to foreign media reports, according to the latest statistics, the Apple iPad accounted for more than 60% of the tablet market share, Android Tablet computer was the second and accounted for26%.Now many flat-panel manufacturers hope to develop their own platform to seize the market. Considering that, Apple is

now really under great pressure. Some analysts said that although Apple has consolidated its position as market leader, just like the iPhone, even if the iPhone is the world's best-selling smart phones, the sales worldwide of Android phone is still very easy to beat it . We can expect that Apple iPad has the future of worrying, in the near future, its dominant status in the tablet computer market is likely to not be maintained. The reasons are as follows. 1. Sales is everything For the iPad, the biggest problem is the sales quantity. No matter iPad is more popular, it is difficult to compete with the Android tablet computer that has a wide variety of products. In the next few months, Amazon, HTC, Toshiba and other companies will launch new Android tablet computer. The shipments may make the ipad lead to loss in the competition.

2. Amazon Kindle Fire With the release of the Amazon Kindle Fire, many people believe that pricing of $ 199 tablet computer is likely to change the market of competition rules. Research also endorsed the view that the Amazon Kindle Fire will have a profound impact on the market. Although in the initial of the sales Kindle Fire may not compete with the iPad, its aggressive low pricing is likely to help it win the war. Besides, the ipad is also deeply flawed, for example, many common video formats can not be played on the ipad, they need to convert a suitable format by using
dvd to
ipad ripper. With the converter, it can not only show
how
to convert dvd to ipad, but also watch tv shows on ipad. 3. Steve Jobs was already gone We must face this reality: Steve Jobs, Apple's backbone, a very visionary Apple CEO has left Apple and left the world. The death of Steve Jobs on Apple's influence still can not see, but we do not know what the future will. It is really difficult find this leader that leads Apple to go the peak. 4. Does not support 4G Does not support 4G appeared to be overmatched for 4G technology all the time, which including the highly expected the iPad 2 and iPhone 4S has failed to support 4G. However, its competitors, such as Samsung Galaxy Tab 10.1 can support 4G.

Can Kindle Fire takes victory in the tablet market

After a few months, Amazon's 7-inch tablet computer Kindle Fire has come on stage finally. Compared with Apple ipad, this tablet computer is much more like Nook Color and we can hardly see any mark about Android. Apple's entry-level iPad sell at $ 500, which is a very stubborn problem to other tablet computer manufacturers. Kindle Fire reduced the tablet computer's "thresholdâ again, it is reported that Kindle Fire will sell at $ 199. Some analysts believed the price of $ 199 of Kindle Fire will become a killer for Apple iPad, but it is estimated that this will not happen. Apple launched its products and does the opposite: driving hardware sales by low-cost songs, podcasts, videos and applications. Its profit margin was higher, and has achieved unprecedented success.
So,
are the Android tablet fans who want to buy a lower- price tablet computer attractive to Kindle Fire? Or Kindle Fire will attract Kindle e-reader users who want to use more features. According to industry projections based on early sales figures, the sales of Kindle Fire will be lower than expected. According to the communications industry analyst firm Current Analysis analyst William Holden said: the launch of Kindle Fire is a tool that help Amazon to attract customers and then make more profit by its service and content. "However, from a hardware perspective, compared with the other tablet computers, Kindle Fire does not constitute an overwhelming superiority. Although it is equipped with dual-core processor, 512MB memory and 8GB storage capacity, but it lacks some based equipments, such as camera, Bluetooth, microSD slot, GPS and so on some key functions of traditional Tablet computer. Even compared with the ipad, it only can support flash formats, other video formats still not be played on it like the ipad, for the ipad only can support mov file and mp4, If you want to play other video formats on the ipad, you need to convert it into a suitable format by using a dvd to ipad mac converter.
Kindle Fire is no exception.

Early positioning of the tablet computer market is not just a show, the tablet computer manufacturers need to urge developers to create necessary applications to attract customers, and developers do not want to waste time on unattractive device. Amazon's Kindle Fire will be the first tablet computer that is a positive form of competition to Apple iPad. In my opinion, Apple iPad still has a lot of improvements, for its compatibility, Apple has several different system and also they are not compatible, if you want to transfer some files from one to another, you need an ipad to computer

transfer.So I think that if Apple can solve this problem, it will greet more bright development future.

The duopoly competition of Samsung and Apple will upgrade

Samsung and Apple, the patent battle of these two technology giants is heating up. According to reports, Apple and Samsung have long been entangled in Australia's patent battle and have come to an end with the failure of Samsung. Samsung's Galaxy Tab 10.1 Tablet PC was banned in the local. According to latest news showed that Samsung demanded that it need to ban the latest generation of Apple products iPhone 4S has been extended to the Asia-Pacific region. It is understood that the Samsung Galaxy Tab 7.0 Plus will use Android Honeycomb 3.2 operating system, the dual-core processor, 1024 Ã 600 resolution multi-touch screen. The Network supports HSPA network, GPS navigation and WIFI. The overall quality is good. What is more, Samsung Galaxy Tab 7.0 Plus will support more common video formats, most important, it do not need a dvd to ipad converter to convert like the ipad. For now one of the largest full-line manufacturer of digital products, it is self-evident that Samsung studied under the broad product line. And this time the Galaxy family plans a big push into the tablet PC market soon, one can see from the past two years the Tablet PC was accpeted by consumers, the other is the open-door policy of Android platform was benefit from Samsung, that join the flat panel market, expanding the product line has become a well-deserved things

Samsung's multi-faceted attack Apple iPad From the release frequencies of Samsung Galaxy Tab Tablet computer, the release time of these three products are less than three months. It was clear that the strategy is now aiming mainly at Apple ipad. Samsung and Apple are undoubtedly the world's most beautiful areas of smart mobile devices, the most talked about two companies, the former is now called the backbone of Android smart mobile devices, the latter is dominate the global consumer the market in the field of smart mobile devices

The war of Samsung and Apple will upgrade In addition to Android OS tablet computer launched a new round of offensive, Samsung

self-developed bada system also developed to evolve a step by step, Microsoftâs next-generation operating system
Windows 8 has already revealed the true capacity in the Samsung tablet computer. It can be seen that Samsung Tablet PC products has taken a multi-legged walking way. However, according to foreign media reports, Apple acquired a Sweden 3D Map C3 Technology company. Insiders said that this is the action that Apple will be ready to develop their own map services products and it is likely to be embedded in next-generation operating system iOS 6. For Apple fans, 3D is also a great surprise, but I am wondering whether that it also needs a
3d video converter to
convert a suitable format, it has not been the focus of my means. The key is that the Apple iPad and Samsung tablet computer will inevitably put on a show of duopoly competition.

The tablet computer will become mainstream in the future

Beijing on October 31 message, international research firm Gartner said that in a special report about "iPad and the future product: the future of computer vision" the tablet computer will replace several consumer electronics and the notebook computer product that has the similar tablet functions will become the mainstream.
Gartner said that the multi-touch functions of the tablet computer allow users no longer limited to the keyboard and mouse, with the increasing popularity of the tablet computer, when the users use the other computer equipment and will look forward to using more convenient operation of the multi-touch interface. Gartner research director Angela McIntyre said that t in the next five to ten years, the flat computer media will lead to change the size of the computer, modular design also makes flat with new features, which become a first choice of a cross-platform control as well as function of both consumer electronics and computer product. McIntyre
believed that the tablet computer will replace several consumer electronics products and the notebook computer product that has the similar tablet functions will become the mainstream. The slightly bulky computer will now be eliminated. McIntyre said that
â though the flat computer has its flaws, for
example, ipad, it only can support mov file and mp4 format, if you

want to play other many common videos on the ipad , the best way is to use a

best

ipad video converter. Besides, its compatibility also is not

very good, for its system is closed and nearly has compatible with other computer equipments, so such if you want to transfer video or files from ipad to another one, you have to use an

ipad to computer transfer.

However, its flaws do not affect their enthusiasm for the

ipad.â

McIntyre also said: "when the flat computer is connected to the different products, it can replace a variety of specialized electronic equipment. When you put the flat computer on the car dashboard, it can replace a dedicated navigation systems, car entertainment systems and environmental controllers. If the flat computer is connected to blood pressure, on the bathroom scales and blood oxygen concentration meter with wireless network connection, it can create a home health monitoring of the environment, personal health measure and then it can also transfer the data to the doctor. If you put the flat computer on a projector, it can transform into an electronic digital signature or a different network media playback devices. " McIntyre said that it is more necessary to deploy the other alternative multi-touch interface for computer equipment to new markets. Smart phones, tablet and tablet mixed with the product will become the first way to offer many people to surfer in the internet.

Network video industry continues to grow and develop

Bayesian consulting recently research showed that: video users are more willingly to accept to watch video by using a tablet computer and they have a high recognition and acceptance for the tablet computer than smart phones. Research results showed that: 61% of video users see the video by using internet devices, of which nearly 50% of users chose the tablet computer, the other users will give priority to the Tablet PC when they consider to change their equipment in the future. The Video industry has broad prospects for development Video industry, mainly includes: IPTV and Internet video, mobile video, CMMB mobile TV video service. According to

Bayes research showed: eijing, Shanghai, Guangzhou, Shenzhen and other cities, more than 80% of users have consumer all kinds of new video services, the traditional position of cable television is declining. Thanks to advances in information technology, the barriers of broadcasting, Internet, and communication are gradually melting. The radio and television enterprise with the help of communication network are to spread video content. The telecom operators are paying more attention to IPTV, mobile video and other new business. The multi-fields cooperation of telecommunications operators, Internet companies and broadcasting are appearing .The next five years, video industry will increase at the fastest rate. By 2015, China's video industry will reach 250 billion yuan.

The tablet

computer manufacturers and video sites are to actively promote the development of video industry. October 2011, Amazon launched the tablet computer Kindle Fire, the main selling point of this section is that browsing speed is very fast. The product is exploring to Amazon Silk, which is used the browser AWS services. Silk can optimize the user's browsing experience and open the page very quickly. In addition, you can play all pages, including video content. This means that Kindle Fire in the startup speed of video playback will be greatly improved. Amazon will soon launch a new version of the Kindle, so the second and third generation Kindle Fire's performance will be more stable.

In

addition to the tablet manufacturers, China video site youku also launched a comprehensive cooperation with the domestic tablet computer manufacturers. Youku has released iPad2 client-side, and actively to layout strategy of wireless, wireless domain will become the extension development of youku. However, for ipad only can support mov file and mp4 format, so we can not watch tv shows on ipad directly, we need use a

dvd to ipad for mac

converter for help, even so, but it still has other advantages, for example, it can

make

3d videos. In addition to the iPad, youku also has reached full pre-installed cooperation with Lenovo Pad and would cover all first-tier brands. This is an important component of client strategy for youku and also its combination Tablet revolution, which to get the actions of the transformative application. In the future, the Tablet computer and video industry will appear complementary and interdependent appears and common development situation.

Grasping the three big trends is the key

Apple changed the mobile phone industry ecology and also had a knock-on effect on small and medium size panel industry. Even 2011 the average prices of phone Panel fell slightly, but the market demand continues to grow, the unit shipments of the ipad has reached 1.71 billion, which is growing by 17.76% than 2010. The Touch panel will add values As there are many competitors in tablet market, a new generation of smart phones and tablets of 2012 still have the pressure of controlling cost, it is to expected that the decline rate is 10% quarterly, however, The simplified panel technology will be a key. Some experts said that smart phones and the tablet computers can support projected capacitive touch panel technology and coupled with the thin and light design, external wall-mounted (Out-Cell) touch technology is gradually moving towards single-glass touch solution(One Glass Solution/Advanced Touch Technology; OGS/ATT), which is expected to reduce at least 10% of lamination costs and also enhance touch sensitivity. However,

in order to meet customer needs, touch module factory, including Taiwan and Korea operators, are to continue importing single-glass touch module with embedded touch panel solutions, which is expected to cost savings for brand clients effectively and also maintain its competitive advantage in the marketplace. In addition, Samsung Group's SMD (Samsung Mobile Display) company has imported On-Cell embedded touch technology, such as the Samsung Galaxy Smart phone. Experts say that most of Taiwan businessmen can provide total solutions, but it was imperative to promote production and drive down prices, which could defy with Samsung. What is more, the touch module factories want to earn a position in the tablet market, they should start it from the opponent's weaknesses, for example, many common videos can not be played on the ipad, if you want to do that, the proper way is to use a

best

ipad video converter, but it can solve this converting problem fundamentally. So this point is the most important chance. High resolution Panel technology IPhone 4/4S used 640x960 3.5 inch retina retinal monitor display of painting pigment, which is having a knock-on effect on the high-end smart phones with more than 4 inches, WVGA (800x480 art pigment) resolution phone Panel trends.

However, only Japanese small and medium size panel makers and Korea SMD can benefit from it.

From enterprise to product, comprehensive greening In General, TFT LCD light is mainly from backlit source module, the display more clearly, the higher the brightness of the backlight module, so it needs more power consumption, which is not to need the requirements of environment green energy-saving. In order to overcome this problem, panel factory gradually developed energy-saving LTPS TFT, IGZO TFT substrate technology and AMOLED panel technology, and also put them importing market accelerating universal speed. Besides, in recent years, our world has just entered an era of 3D, 3D technology has been constantly developed, now as long as you have 2d to 3d converter,
you can make 3d video by yourself.

Experts predicted that the price of Tablet computers will decline

This is an explosive age of science and technology, humans from the stone age into the bronze age has spent millions of years of time, from the bronze age to the steam age took approximately 5,000 years of time, but after starting from the steam era in the 1860 of the 19th century, mankind has just spent less than 200 years of steam to the electrical deflected into the information age. This explosive development brings new knowledge, new technologies and new products to human beings, for instance, the hottest tablet computer in digital city.

From technological development point of view, the Tablet computer is almost the next computer sample, its portable, easy to use, stylish, simple, from the inside out revealed a temperament from the future, more important is that the tablet computer is adopt with Multi touch capacitive screen, which has greatly satisfied the user's control. People can do whatever stamp on the thin book or finger-dots, so media evaluation the birth of the tablet computer is an "extension of the power of the human spirit". Yes, its simple operation and a variety of link method to ensure that we can through this smooth like mirror to connect with anybody, anywhere in the world. It does claim to have is a "reach". While its lightweight shape ensures even shape slender slim beautiful women

holding in their hands without seem abrupt. Regardless of where users go, they can get ready to put it on like a mobile phone in the package. It will be your most loyal friends, the most capable assistant. What is more, it also adds some new elements, 3D is the most points, as long as you use a

3d video converter, you

can convert all kind of common video format to 3D format, besides, with it, you can also

convert

2d to 3d.

According

to the information reporters learned: the global tablet computer sales exceeded 15 million in 2010, which the sales has more than 1.7 million in domestic, according to the authorities is expected in 2012 the worldwide tablet computer sales will more than 50 million. Face so much market cake, how many hardware manufacturers will "light?" the manufacturers are popping up like crazy, the various brand of Tablet computers together into the market, whether domestic brands or assembled the cottage machine, they are playing the pad card. But in the end what kind of Tablet is the industry authority, except we know that one or two brands of foreign, are there any industry experts recommend high cost performance brands? In order to have a better understanding of the market, this reporter interviewed Chinese 3C Dr Lo, an expert in the industry. Dr Luo also said that United States OYOpad is adopt with large multi-touch screen and innovative software 7 to 10 inch, which is greatly convenient for consumer to control. It also introduced popular Android 2.3 froyo system, fully supported WiFi and Adsl, 3G networks and 3G speeds up to 7.2M/s. At the same time, United States OYOpad tablet can also support 91 software Assistant, pea pod software, and HD video flash10.1.

The global IT structure

Jobs left the world and left Apple company that was founded with Jobsâ own hands, he left the billions of fans in the world. In the IT industry, even field of science and technology, he is so excellent that we cannot praise him too much, or we can only use the âthere has never been and will never be anyone just like heâ to describe

him. I was wondering, why Nobel not to give jobs awarded a prize. Apple's third great thing about opening, the most popular products is Apple iPhone and iPad, reasons for its success are the multipoint touch screen touch screen and user experience, the second is the perfect industrial design, and the third is the app store. Since the opening of the Apple was criticized by many people, in many people's eyes, Android is simply not worth mentioning.

Apple's

next four moves A day before Jobs died, Apple published iPhone4S, its appearance is very similar to the iPhone4, just the internal has increased A5 double nuclear, and 8 million pixel of camera, these devices has already guessed by fans, and only of highlights is Talk, it seems to design for Europe motorists, for other area, it has not almost attractive to the lower the price of iPhone4. In short, if there is not Steve Jobs ' iPhone4S, Apple fans were very disappointed. If IT is a game of chess, Steve Jobs ' Apple completed overall arrangement, walked out the highlight the central disk, and still not to go to end. Perhaps the iPhone4S is the chess that jobs did not cover, and we will find IT on this board that where Apple has not set foot in some open space. One is the 7 inch tablet computer. Apple has introduced two 9.7 tablet computer, and has not joined competition of 7 Tablet computer. In the seven-inch tablet, Samsung P1000 received a lot of shares with low prices, Recently Amazon also launched 7 tablet computer, it appeared that the seven-inch tablet market was also filled with smoke. Second is retinal resolution panel. In the future, there isn't much suspense that apple will launch the retinal resolution (2048*1536) ipad, now only a matter of time and cost, the resolution of this Tablet computer will exceed the notebook, , you can scan directly into print, reading feel is comparable to paper print. This product will have far-reaching impact on the entire laptop and eBook market. The third is to support the identification of video game players. Camera is a standard Apple equipment, through the camera gesture recognition, implementation across the "hundred-foot pole head went a step further". Operations are even more complex, the similar to the Wii and Kinect gesture recognition is not impossible. Apple will combine with the gesture recognition technology of Microsoft and Sony, as the third-largest fully mastered gesture recognition technology and industrialization of IT enterprise, Apple will also become the fourth-largest video game manufacturers The four is the enterprise mobile Internet solutions. Latest news showed that IBM worth will surpass Microsoft, which means the enterprise market of cake is very objective, with its iPhone and iPad, Apple has created a good reputation in the market for high-end business, it is easy to form a high level of growth.

I think
that Apple should solve the problem of video converting. We all
know that the ipad has a big shortcoming that only supports mov
file and mp4, other many common video formats can not be play on
the ipad, if you want to do that, the best way is to use a
dvd to ipad converter, if
Apple can solve this problem, the users must be very happy, for
facing the numerous video converter on the market, which is the
mac dvd to ipad converter
? Many users are very interrogative, this problem needs to be
solved urgently

The Battle of 7-inch Tablet Computer
In the across numerous products era, "size" is no longer marked
in the cold on the specification of parameters in the era of modern
industry, now it is given rich connotations. On November 15, the
Amazon Kindle Fire tablet computer will be officially on sale,
despite the distance from the market for some time, but since the
September 28 Bezos published this 7-inch flat panel at low price of
$ 199, various analysts had already to think of it is as trump card
products in Android tablet computer camp to against the iPad.

<img
src="http://image.techweb.com.cn/upload/2011/1012/1318431436371.jpg">

A product that has not yet officially on sale was able to
allow all market analysis so solution optimistic about its
prospects, before it released, only Apple can do it. From price, ,
low price of $ 199 means that the users who have already owned the
iPad also can put the kindle as the second Tablet, for non-iPad
users, low price made them have the ability to start their own
Tablet experience from Kindle Fire. What is more, Kindle Fire not
only can support Flash but also other many common video formats,
unlike the ipad, if you want to play other videos on ipad, the best

way is to use dvd to ipad converter, what is worse, we can not watch tv shows on ipad directly.

From the point in time, Kindle Fire will be released on November 15, which can just aim at Thanksgiving and Christmas holiday market. For most people, buying a Kindle Fire to send some not-so-close people, which can look stylish and dignified, compared with digital cameras and TV set-top box, the kindle gives him the opportunity to keep in mind that it will beat iPad 3.27 million records ,when the release of the first quarter in holiday market.

However, low cost and appropriate release time may be able to bring up the products sold, but if Kindle Fire can succeed in the end and should thanks to its smart size selection.

Choosing the 7 inches will make sure that Amazon is distinguished from other competitors for their more distinctive mark tags: 10-inch iPad is the best choice of entertainment experience, the people who was used to electronic reading will not hesitate to choose a 7-inch Fire.

<img src="http://dev.wo.com.cn/filepath/appc_pic/1CA6C7RH9.jpg">

From a user experience perspective, 7-inch Tablet is conducive to strengthening the brand awareness by electronic reading. From emotion, electronic reading fans are mostly to accept Amazon, for the people who want to read eBooks on the bed or on a train by using Tablet computer, nearly 10 inches the iPad would be too big and not convenient. If the kindle is 10-inch tablet computer, battery life requires more heavier batteries, hardware increase makes the product very difficult to do much more light, it is also difficult

to fit books carry a light reading scenario; at the same time, the single hand's small size is more in line with the long deep reading user experience. In this connection, Amazon has a deep experience from its large size on the Kindle DX.

Why can Amazon Kindle Fire become the Challenger to Apple ipad

There is a Chinese saying goes: all beginnings are hard. The phrase
is used to describe the challenge Apple's hard iPad Tablet market
many manufacturers is really very appropriate. Because the iPad
presented a unique situation in Tablet market today, because it's
so-called challengers were lost at the beginning of the array and
that's one of the most important factor is price, that is these
opponents at the time of initial released tablet computers, the
high price let the market and the user pay no attention to them and

allow themselves to each other's pricing dispute between the Red Sea, so that the later passive prices is difficult to restore the original losing attention. Compared to the above tablet manufacturers, the $ 199 price Amazon's Kindle Fire was raised from the beginning of the excitement in the industry and markets of concern. This shock and concern recently has been through the relevant authoritative market research and Amazon's own actions confirmed.

At the same time, Retrevo survey results showed that 69% of the people interviewed are interested in purchasing a tablet, which 44% will consider buying smaller size Kindle Fire tablet, only of 12% the user will still consider buying iPad. At the upcoming annual season, whether the user already has a Tablet PC, or is being investigated to buy Kindle Fire, which all of the users are more than Apple's iPad It is precisely this existing and potential needs, popular Amazon Kindle Fire scheduled to amount at the beginning of the publication of the case, Amazon has recently raised its Kindle Fire production to 5 million units, after the trade is expected until the end of 2011, Amazon Kindle Fire will be sold nearly 4 million. Although there is still a gap with iPad quarterly sales of 11 million, compared with the initial sales of other manufacturers Tablet listing, Amazon should be well deserved first runner-up in the Tablet market. To know that in the last quarter sold only 200,000 of the BlackBerry Playbook Tablet PC, and Motorola are only sold a mere 100,000 Xoom tablet. These manufacturers are considered to be a strong Challenger to the Apple iPad. Though Apple products have their shortcomings, for example, the ipad can only support mov file and mp4, other formats can not be supported, if you want to do this , the best way is to use a mac dvd to ipad converter.
They also have similarities, all of them can convert 2d to 3d by using a
2d to 3d converter.

Why can Amazon Kindle Fire become the Challenger to Apple ipad? First of all, I believe that is the price. Let's not talk about $ 199 is half much lower than the $ 499 iPad, it is important that Amazon's Kindle this pricing of Fire is to out of the current Android Tablet price of the Red Sea and natural exceptionally eye-catching. Because if they wanted to challenge iPad, preference needs to be done is in Android Tablet market stand out by the market and users concerned, this is the first step and is an important step.

Super Notebook burst unto the scene in 2011

Both retains the traditional notebook Office properties, and introduces the tablet computer of superb entertainment, the new super note let PC manufacturers have felt for the first time "beating" tablet of the weapon Steve jobs just died, iPad will usher in a new round of strong challenges. On October 19, ASUS announced in Beijing that they launched its first Ultrabook ultra, which is thin and light notebook (Chinese name "ultra") ZENBOOK, it was following Acer's second home in the domestic launch of a super-this PC brands. Prior to October 12, ASUS also has released the new product in New York and Taipei. Early on September 16, the Acer jumped to the mainland market AspireS3 "Hummingbird" Super pole.

The war of PC In the past one or two years, in addition to the Apple company, other companies were hard to get a good harvest on the PC market. Particularly Asus and Acer, were beaten by Steve Jobs, which were riddled with problems. In 2010, the birth of Apple iPad put forth a NetBook in one fell swoop the mainstream market. At that time, Asus and Acer were relying on the NetBook to make quick money. In March 2011, Apple iPad2 listed one week, the sales of ipad2 was near 1 million. In addition to Apple, HP, Acer, ASUS, Lenovo, Toshiba, Samsung, also followed the launch of the tablet. But they only followed which failed to go beyond the jobs of innovative design and Apple's strong brand advantage, the so-called Tablet market actually is the iPad market. Though the ipad has some shortcomings, such as its compatibility is not very good, if you want to connect one ipad with the another ipad, the best way is to use an
ipad to ipad transfer.

In February this year, Barclays Bank analyst BenReitzes said that the sales of the ipad expected to 33.7 million this year, which accounted for global 70% of the tablet computer market share. In the Chinese market, domestic tablet of Eric's latest market research report showed that iPad's market share is as high as 50.8% per cent, followed by Lenovo 13.8%, Samsung 9.8%, Dell 6.8%, ASUS 5.7%, Acer 2.8%, and so on. It is clear that none of the five traditional PC companies can compete with Apple in the Tablet

market, the traditional PC market has been seriously eroded by tablet computers. On October 12, 2011, IDC and Gartner also released third-quarter PC shipment reports. The Former noted in its report said that global PC shipments in the third quarter of this year is totaled 91.879 million units, representing a growth of 3.6%, which is lower than the previous estimate of 4.5%. The latter are more pessimistic, it believed that PC shipments up only 3.2% in the same period. It is also lower than it had forecast. Super Notebook No one wants to put his own cake over a silver platter. While threatening the traditional PC makers are seeking countermeasures, the Intel launched the concept of Super Notebook, which is intended to compete with ARM company. The Super Notebook is the same as an ordinary PC, so its entertainment features and office functions are stronger, what is more, you can convert

2d to 3d with a 2d to 3d converter.

Comprehensive Analysis of the iPod

Since the birth of the first iPod, the whole iPod family products have gone through 10 years of development history, its influence is also growing. Since the launch of iPod, it is not just a simple MP3, it also is not only necessarily a hard disk that can be connected to the headset. In the past 10 years, the emergence of the iPod has changed the consumer electronics industry. IHS iSuppli consumer electronics industry Chief Analyst Jordan Selburn said "the iPod opened the era of digital consumer electronics, iPod put consumers and content together, and this has had a profound effect on all current consumer electronics." Over the past 10 years, the iPod had a great influence and even become synonymous with portable digital music player. Jerzy Buzek said: "the design of the iPod is very simple and has an aesthetic appeal, what is more, it also uses high quality materials such as stainless steel. Apple industrial design team that was led by Ivy focused on strict and sustainable design philosophy: the first generation of the iPod met Apple's product line, and the latest generation iPod is the same, using the integrated molding process, which is similar to the iMac and MacBook Pro. â
He
also said: "the simplicity of the iPod itself has already said it

all: there are no unnecessary buttons or scroll wheel, with a single function keys, users navigate the iPod's entire music library. In addition to hardware, the user interface and user experience of the ipod also had an enormous influence on markets. HubSpot interface designer Joshua Porter said: "the user interface design of the iPod has had a huge impact on consumer electronics products, from the first day of the birth of the ipod has completely changed the industry.â But it still need to improve, for it is not compatible with PC and MAC, if we want to transfer music from ipod to mac or transfer music from ipod to computer, we can not do this directly, the best way is to use an ipod to mac transfer.

App Store revolution Neither the iPhone nor the iPad, looking for interesting software are necessary and unique in the App store. Apple is starting from the iPod, the concept into the iTunes App Store, then gradually it evolved into a standard pattern of software sales. Apple's App Store model is actually a set of software including fixed mode of the development, submission, review, download, and update , which is easy to operate. Innovative media tools From the birth of the ipod , iPod is not just a music player, in addtion to music, iPod also has the storage function of photo and video,which makes it a multimedia player. The other hand, iPod do not need the users to do anything extra, you can run stable well . This concept has also been introduced on the iPhone and iPad, which made the iPad can be used to replace computer media tools for most of the work. With the iPad, we can without opening the PC and also can easily finish on the iPad, and that is why media tools as a result of extraordinary significance.

Is Amazon Kindle Fire just something meteoric

Kindle Fire is not an epoch-making and revolutionary product, but it certainly is the most important product for Amazon. But the biggest question about where are its benefits. The Fire body imitated the Blackberry tablet computer, but it has more refined workmanship. Its fuselage is more narrow, the fewer press and the

border is more narrow. This is no coincidence: both of them are manufactured by the same company. Fire does not win the heads turning as high as iPad 2, but will not fall in price in hand. It is like an evening dress, cropped exquisite style and low profile, is not intended to show how trendy blinding.

And as the previous Kindle, Fire has also a thinner medium sized paperback book size. It is lighter than Barnes&Noble's Nook Color, holding for a long time will not feel tired. It has a scratch-proof of 7-inch color screen, rear fuselage paint feel soft, like rubber. Top of the fuselage are two small loudspeakers, volume is large enough to watch the movie (the premise is pretty close).What is more, Kindle Fire can support many video formats and it also is compatible with any devices, unlike the ipad, it can only support move file and mp4, even it is not compatible with Mac, so if you want to play some other videos on it, the best way is to use a
dvd to ipad converter,
however, if your ipad run Mac, you should choose a
dvd to ipad mac converter.
Inside of the fuselage is adopted with a dual-core 1G processor, 512MB cache, which can sufficient to achieve smooth running freely. Fire also has 8G storage space that can be used to store books, movies, documents and software. According to Amazon, under the WiFi is off, battery can be available for 8 hours; when you are always watch movies, the battery available can use for 7.5 hours, this sounds good. If you turn on WiFi, it is much more filled several times: according to my experience, if you are running the day-to-day tasks such as Web browsing, watching movies and reading books, it needs a single charge every 6 or 5 hours. This is good. However, the iPad open WiFi , the stand-by time is 10 hours, Nook tablet computer is claimed that under the WiFi turned off, its standby time is up to 11.5 hours, compared with these two products, Fire lose out.

In the way of software, Amazon used Google 's Android operating system (kernel, codenamed "gingerbread") for Fire and created grey and orange as the principal of a completely new user interface. Main screen design was like a bookshelf, the main screen has four plate: a section thin of State, notices bar, display battery State and background run of program; a cross bar, in accordance with the media type categories to show books, and video and software; a virtual of "rotating Trojans" type cover browser, may for click browse recent media; a specific regional, it is used for user do bookmarks mark.

Five reasons for Apple Ipad should not to cut price

United States IT site eWeek wrote today, although some people in the industry believed that Apple iPad 2 should be cut in order to remain competitive, thereby meeting the challenge of Kindle Fire, this logic is flawed. Amazon Kindle Fire tablet computer was launched at the $ 199 price, and Barnes (Barnes&Noble) Nook Tablet tablet computer costed just US $ 249. Many people said that when Apple is also re-thinking Tablet strategy and lower iPad price of 2. in order to better face the challenges of competitors, the Apple should re-thinking Tablet strategy and reduce the iPad2 price. 1, the sales of the ipad2 has been very strong IPad 2 is currently starting at $ 499, but it is very superior in retail channel sales. Regardless of the price or not, iPad 2 tablet computer will be the most popular.

2, the iPad 2will still be higher than the price of Kindle Fire Apple IPad can't reduce the price to $ 199. So even to cut the price, the price of products will still be higher than the newly listed products, this does not in any way. In fact, Apple will continue to provide quality products, and the Amazon and Barnes to provide cheap products. 3, the other manufacturers will follow up If in order to attract more users to buy the iPad 2 Tablet computer, Apple reduce the price, most competitors will follow within a few days, including the Samsung and Barnes, in order to maintain the relative prices unchanged with Apple.
4, Kindle
Fire may not be able to successfully Believe all those who think Apple will be forced to cut prices, Kindle Fire will be a success. Judging from the history of Tablet computer, for most of the manufacturers have failed, so Kindle Fire may not be able to succeed. 5, other products do not change Many of the products at first seems very good, but the actual effect of listed are unsatisfactory. RIM BlackBerry Playbook is one example, the product is equipped with 7-inch display, but there is no localized e-mail application and information. Kindle Fire has 8GB of the storage space, and does not have a camera. What is more, the other products has the same shortcomings as the ipad, for they also can not support many other video formats, for example, such as

convert

avi to ipad this simple operation can not finished, however,
they can make 3d videos by using a

2d to 3d

converter.In short, the price is not the key factor, which
Tablet PC manufacturers don't worry. Regardless of how price is,
iPad 2 is going to be overlord of the market.

Top Ten disadvantages of Kindle Fire

According to foreign media reports, the Kindle Fire is a 7-inch IPS
multipoint touch screen Tablet computer that was introduced by
Amazon recently , it used 1GHz TI OMAP4 dual-core processor, 512M
RAM cache and Android 2.3 Gingerbrea "ginger cake" operating
system, its configuration is in the first class and full-featured
.However, it is worth mentioning is that the 8GB version of the
Kindle Fire sells only for $ 199 , which is more than the one-third
iPad prices, so the performance-to-price ratio superelevation. 1,
does not support the Google ecosystem For those users who love
local Android version of Google applications (such as Gmail and
Maps), Kindle Fire equipment is not in itself satisfy their
aspirations, the user can only be obtained through Amazon's app
store download, or through escape explains the ways to obtain these
Google applications. 2, does not support the local Exchange
Compared to the Apple iPad, the obvious flaw is that Kindle Fire
does not support the local Exchange. Through the iPad, it allows
users to get easily e-mail programs to connect to the Exchange
Server, but the Kindle Fire is unable to meet this demand of the
user.

3, does

not have volume buttons In my view, the most obvious flaw is that
Kindle Fire does not support volume buttons in the Tablet, it makes
users cannot turn sound on or off quickly. In the Kindle Fire, the
user must enter the dashboard for sound adjustment, it is not to
work apparently simple, intuitive, fast enough. 4, does not have
home page button Does not have a primary button is another defect
of Kindle Fire, it makes the user can find some applications in a
bunch of application icons. 5, the main screen I will say that the
main screen of Kindle Fire is very cluttered, it shows any last
used applications for the users, it has no sense of organization,

which is the whole system of user interface elements in the design of a part of the worst. 6, there is no folder Many users have many Kindle books, but these books in the Kindle interface are in the form of shelf, which is very inconvenient to view. I will say that there are no Folders feature provides users with a lot of inconvenience in Kindle Fire home page. 7, the shell is easily to shift The shell of Kindle Fire is easily to shift, if users use single hand to grip, you will find Kindle Fire easy to hand fall to the ground. 8, does not contain the Android application store For Kindle Fire users, the news that Kindle Fire does not contain the Android app store was mixed. Recently, the report noted that since July, Android malware increased by 472%. From this perspective, Kindle Fire that it has not the Android app store is a good message. However, the other hand, this makes the Kindle Fire users miss the opportunity to experience a lot of Android applications. 9, the accuracy of touch screen is not high I found that the accuracy of touch screen is not high, particularly in the Bookshelf home screen user interface, often want to click on an icon, but another icon will appear. What is worse, it is uncomfortable to watch videos on Kindle Fire, it also needs a mac dvd to ipadconverter to convert a suitable format like the ipad.

10, does not have Bluetooth support Sometimes, a small defect will make the Kindle Fire cannot replace the low-end laptop, for example, it does not support Bluetooth. Dominated by consumption of multimedia content for a Tablet PC, Kindle Fire lacking Bluetooth support is justified. But it is better than the ipad, for ipad is not compatible with other device, if you want to connect one ipad to pc or mac, the best way is to use an ipad to ipad transfer.
However, the Kindle Fire can connect any mobile devices.

Apple Ipod may be regarded as chicken ribs

Review: MarketWatch columnist Rex Crum wrote, from the recent series of signs, Apple maybe intend to give up the iPod, or at least no longer attaches importance to iPod, though the later is a major contributor that has changed the fate of Apple and changed the music industry as a whole a revolutionary invention. In the

decade-long time, Hasselbeck has been a Seattle Seahawks team's starting quarterback. The team entered into the Super Cup final for the only time, which was also under his leadership. But this summer, the Sea Hawk made a new choice, they decided to give up Hasselbeck. However, switched to Tennessee the first several games of the Giants, the performance of hasaibeike was still remarkable. Though it also has some shortcomings, such as it can transfer music from ipod to mac directly, if you want to do this, the best way is to use an

ipod

to mac transfer.

The past

four quarters, Apple (AAPL) sold over 45 million iPod in total, which realizing $ 8.36 billion revenue. However, the iPod is about to usher in a ten year old birthday next month, when more and more signs showed that current attitude of the Apple iPod, are becoming increasingly similar with Sea Hawkâs attitude

towards Hasselbeck. In the music industry, this is called

âkilling your babies.â You

might have a couple of dozen songs worked up, but once in the studio, you sacrifice most of them to focus on the strongest of the bunch. âThis is Steve Jobsâs

genius,â said Silicon Valley futurist thinker and

Stanford University instructor Paul Saffo about the now-former Apple chief executive. âThe guy destroys the

industries he creates to create something new.â

Appleâs not likely to build an event around a

product thatâs in retreat, even if

itâs the one that arguably saved the company,

revolutionized the music industry and made investors happy as

Appleâs shares have surged a split-adjusted

4,562% since the music player made its debut on Oct. 23, 2001. The September iPod event, as well as the colorful media notices which often came out a week or so before, always stoked interest in Appleâs line of industry-changing iPods.

A few

techniques have great destructive effects indeed and fully live up to change the world. Such as TV, personal computer, even a microwave oven, could be included in such a short space of a list. Early days, they are considered to be expensive, novelty, but with the passage of time, but they have become an integral part of our daily things. In fact, everything has two sides and

â¦ is not an excepÂ¬tion, it has both

advantages and disadvantages, other Apple products is also not an excepÂ¬tion, for example, the ipad, it only can support mov file and mp4 format, other common video formats can not be

supported, even

convert

avi to ipad this simple operation can not finish, you have to

use a

mac dvd to ipad converter

to help you. We should put the ipod join this list. We will take

for granted the existence of the ipod like TV and computer, or even

fail to notice its existence--until it fails.

Product Differentiation let you different or disappear

After Apple ipad come out quickly swept the world, all major
manufacturers have started and to launch tablet computer products.
According to market research firm IDC study showed that 2011
multimedia tablet device market in China in the second quarter
shipments has reached 1.39 million units, compared with first
quarter the growth is up to 63%. Such upside space gave
manufacturers more confidence in the market, the competition of the
Tablet market is also becoming upgrade. Differentiate or die became
the most realistic answer for the competitive market. Such as Apple
ipad, it also has some shortcomings, if your tablet computer
products can solve it well, so your tablet computer products will
be succeed. For example, we can not

rip

dvd to ipad for mac directly, if we want to do that, the best

way is to use a

dvd to ipad mac converter.

The world famous "positioning" master
jiekeâ¢telaote said: "If your products are
differentiated, the whole world will open its doors for
you.â In August this year, ThinkPad launched its
first tablet in United States, in October, it has began to enter
China. At the time, it did not seize opportunities, in the smoke
Tablet market, what does ThinkPad Tablet need stand out? The answer
is of Lenovo Group: differentiation. From the outsiders, Lenovo
Group always looks slow-shoot on the mobile Internet strategies and
actions, these mobile Internet terminal products were launched
after the competitors. But Lenovo prefers interpreted it as the
ultimate perfection in the relentless pursuit. "But also for our

products, responsible for the user, after a ' fine detailed craftsmanship ', it has its own distinctive effect, which enables them to become commercial Tablet is a dark horse in the field."Zhao Hong said. Zhao Hong considered that Lenovo offer much variety of ThinkPad series products and steady quality trusted by the customers. It ranking second in global business notebook has proven this point. With the development of the industry, users also have increasing demand for professional commercial tablet computer products, while the Tablet market is missing a tablet that meets the needs of business people. Based on this background, Lenovo is now putting the field of commercial product accumulation of experience, knowledge and understanding into travel professionals who need strong mobile tablet computer. Lenovo ThinkPad Tablet is the first real commercial grade tablet computer, which address business customers the safety, durability and ease of management. In early

2011, Lenovo Group "Pad" tablet computer went on sale in China. But because of differences in market positioning and user needs, and in the commercial market segment, Lenovo conducted serious and careful research, and also collaborated with partners, has done a lot of market research and product development work to ensure that the launch of this commercially available tablet was a contributions really, truly meet the needs of business people. Zhao Hong believed that ThinkPad brand and the product itself will be the tablet computer's core strengths. For it has powerful functions, it has 3D effects, if you use a 3D video converter, you can change

2d to 3d. It is understood that the ThinkPad tablet computer is designed for Mobile Office people who have very high-end tailored demand, it has other tablets on the market today that do not enjoy the excellent business experiences. In the device of its fully functional business applications also includes a high sensitivity of the stylus. This stylus could provide business users with more convenience and accuracy of input, which can return to the simple and convenient writing habits. Combined with the pre-installed Notes Mobile software can record thoughts anywhere, anytime. On the security and ease of manageability, ThinkPad tablet computer also provides a comprehensive solution. ThinkPad Tablet hardware configuration is very powerful: supports multitouch IPS unbounded King Kong 1280x800 resolution 10.1-inch screen, Photo and Image Nickels; built-in dual camera 5 million + 2 million pixels.
