You may have got lots of DVD movies and want to import DVD to iTunes so that you can transfer them to your iPhone, iPad, iPod, etc. for playback on the go. However, as we all know, iTunes doesn't support DVD. How to

copy DVD
to iTunes
library for playing on iTunes? Well, what you need is a professional DVD ripper that can help you
import
dvd to itunes supported video formats easily and fast with good video quality.

Step 1:

Launch
DVD Ripper for Mac, there
are three ways of loading DVD.
a. The program will automatically detect DVD files and start loading.
b. Click File -> Load DVD or Load DVD Files from main menu to select the DVD you want to Load.
c. Just easily drag and drop DVD files into program for converting.

Step 2:

Click the image button on the right of each video
item, set output file name and select output format from the Format
list. If you want to rip DVD to iTunes for your iPod, you can
directly select the device name as iPod.

Step 3:

After all the settings, click the "
Start" button to start ripping DVD to iTunes
Mac.

The iPad's larger screen makes typing on its
on-screen virtual keyboard easier than typing on the iPhone .
However, most heavy typists will attest that typing on the iPad
will never be as fast as typing on a physical keyboard. The iPad

does have Bluetooth keyboard support, which helps increase typing speeds when writing longer documents or emails. Then I will tell you how to connect bluetooth keyboard with ipad.

Step1

Turn on your Bluetooth keyboard and make it discoverable by other Bluetooth devices.

Step 2

Tap the "Settings" icon on your iPad to open the Settings menu.

Step 3

Select the "General" tab, then tap the "Bluetooth" option.

Step 4

Press the "Off" button under the Bluetooth heading to turn on the iPad's Bluetooth radio. The iPad will now search for and list devices it can connect with.

Step 5

Tap the name of your Bluetooth keyboard when it shows up on your iPad. A PIN number will be shown on the iPad. Type this number on your Bluetooth keyboard and press "Enter." The iPad and keyboard will now be paired.

Step 6

Open an iPad application you can type in, such as Notes or Pages. You should be able to type with the Bluetooth keyboard.

The iPad can do some amazing things, from getting you organized to keep you entertained. It may already be a cliche, but there truly is "an app for that" - the problem now is finding the right app for the job. Over the last three weeks, I have reviewed a large number of photography apps for the iPad. Now it's time to highlight my favorites so you can easily edit, enhance, and share your photos with all of your friends and family.

1. Photoshop Express

A very pared down version of the ubiquitous photo-editing tool, yes, but handy none the less for making basic corrections such as rotating photos, cropping, straightening and even more creative functions such as saturation, tint and convert to black and white.

2. LIFE for iPad

Galleries compiled from the LIFE archives along with
contemporary photos. You can browse through popular galleries,
editors picks, news, celebrity, sport and also search for
something more specific.Although the odd advert will pop up, the
sheer vastness of the archive means that this is a great resource
to have at your fingertips for free.

3. Photobucket

This a great app for users of free photo-sharing site
Photobucket. You can browse the images of others, search for
specific images, login into your own account and upload straight to
it. It's nice and quick to use, and great for sharing as you can
grab image URLS to email/social network with. With Flickr not yet
releasing its iPad app (although it does have one for the iPhone)
this is a great free way to share photos.

4. Foto Editor

This photo editor doesn't come with the myriad of options
that a paid for app like Photogene boasts, but it does include
some fun filters that are nothing special but are very quick to
apply. You can also make simple changes to the brightness and
contrast, but it's missing some vital tools such as crop that
would have made this app a lot more useful.

5. PhotoPad by Zagg

Yet another free photo editing tool, this one comes
somewhere between paid for app Photogene and free Foto Editor for
its usefulness. It does include basic essentials like crop,
rotate and scale, but they aren't as easy to use as Photogene's.
Image properties displays a handy histogram, but without the
ability to edit properties like Levels within the app it might
seem a little redundant. Another dose of fun filters are added on
to this as well, but again there's nothing amazing just a simple
bit of colour adjustment.

Macs are becoming more and more prevalent, and
there can be times when you need to be able to share files
between your Mac and your PC.

In this week's Macnifying OS X, I'm going to show you how easy it is to share files on your Mac so that it appears on Windows computers automatically.

In System Preferences, go to 'Sharing' and check the box for 'File Sharing'. By default, only your Public Folder will be shared. If you want to add other folders to the shared list, click on the '+' sign under the Shared Folder box and choose the folders you wish to share.

After you're done selecting, you'll need to set the Permissions for each shared folder. Generally, you should allow Read Only rights to avoid others from messing around with your files. As you can see from the screenshot below, I removed the group labelled 'Users' from the users list so only 'Everyone' and I appear on the list. I do this to make things easier, only to allow guests logins from other computers.

Next, click on 'Options' and on the resulting window, check the box that says "Share files and folders using SMB" and hit 'Done'.

Now, you'll need to add your Mac into a Microsoft workgroup. To do this, click 'Show All' at the top of the System Preferences windows and click on 'Network'. Select your active

connection and click 'Advanced'.

In the next few days,I will introduce the
rest.Please pay attention to me.

If you are looking for great movies or TV shows, then Hulu is what you need, it's an awesome site for watching TV shows and movies online for free. Hulu only allows you to stream content to your computer, kind of like how YouTube works. And there are a hundred tools to download YouTube videos to iPad, but nothing for Hulu. Now, we got a free Hulu video downloader that will save Hulu videos to your PC and then you can convert Hulu video to iPad to enjoy.

Step 1: Download to PC

Open the Hulu video webpage and go to KeepVid, a free online Hulu video downloader. Then copy and paste the URL of the Hulu video webpage to the keepVid to download the video to your computer.

Step 2: Import Videos

Run the software and choose the icon "
Video to iPad" on the main interface. Then
import the Hulu videos you have downloaded by clicking the "
Open file" button.

Step 3: Output Settings

Select
the output format as iPad compatible format from the "
Profile" drop-down list and specify the output
folder to save the converted videos.

Step 4: Start Conversion

Click
the big "

Apple iPad,its great to be connected with the whole world while I am on the move. I am easily available for everyone because of 3G and wi-fi enabled iPad. Even surfing on iPad is great because of its quick rendering of pages and bright display. There are chances that for surfing purposes on Apple iPad - you are using Safari Browser. Sometimes, I found some glitches on Safari browser that makes my work flow slow too.

Therefore, a few days before, I started to research some other alternatives of Apple iPad Web browsers and you don't believe me there are some cool options available in the iTunes market that works much better and faster than Safari. So, I decided to help you other iPad users too and come up with an article showcasing 5 free ipad web browsers.

iLunascape

iPad version of Lunascape web browser is simple, clean, and fast. Instead of just porting our Lunascape browser over, we thought hard about what's really the best way to browse the Web on this intriguing device. The result is a powerful desktop-class tabbed browser with a unique "InReach" Interface that locates tabs and menus down near the bottom within easy reach of your hands.

Terra

Terra is the fast web browser with tabs, full
screen and other functions. It's better than Safari. Terra has
everything you missed in Safari: unlimited tabs, full screen
browsing, text search and ability to save web pages for offline
reading.

Atomic Web Browser

Atomic Web Browser is the most advanced and
customizable fullscreen web browser to date. Experience desktop
features including Adblock, Tabs, MultiTouch Gestures, User Agent
Switcher, Passcode Lock, Facebook/Twitter integration, Save Page,
and much more.

Perfect Web Browser

Perfect Browser is the fastest and most advanced
feature-packed web browser to date. Experience
Better-than-Desktop Class web with breakthrough features incl.
REAL-Tabs, Automatic Scrolling, TV Video Out, Desktop Browser
Rendering, Offline Pages, Private Mode, Precision Scrollbar,
Multi-Touch Gestures, Fast Tab Switching, In-Page Search, Font
Size Adjustment, Web Compression, Fullscreen & more.

iCab Mobile

iCab Mobile is a web browser for the iPhone and
iPod Touch. It is probably one of the iPhone browsers with the
richest feature set. It provides many unique and useful features

you won't find in other iPhone browsers.

The Wall Street Journal is reporting that the iPad 3 is being produced for a release in early 2012. This fits perfectly with their normal release schedule that the previous to editions of the iPad followed. The WJS reports that key components, like display panels and chips have been ordered from manufactures. This means that all the rumors around Apple ordering parts for the iPad 3 were in fact true. It also seems that the leaked photo of an iPad 3 component may in fact be real. However the rumors surrounding these parts that the release was being pushed for late 2011 release seem to have been false according to current reports.

There are a lot of rumours circulating the web at the
moment, mainly about what features the iPad 3 is going to
have.Can iPad 3 play flash video files or dvd movies?If you want
to play it on ipad,you have to use an
ipad
video converter to convert it.however I believe the main
question on everybody's lips is

how much will the iPad 3
cost?

Now obviously Apple still need to stay competitive to
the market and we imagine they will take most of the hit on the
increase in manufacturing costs, however even with this
considered they are still going to need to increase the

cost of the iPad 3
to us, the customers.

Currently Verizon and AT&T are not allowed to
subsidize the price of the iPad 2 because of Apple. This
essentially leaves the stores with only the option of selling
month to month prepaid data plans. According to The Daily this is
all going to change with the release of the iPad 3. Apple will
reportedly let carriers subsidize the sale of the iPad 3 thus
dropping the price to a reported $199. This would be great for
those looking to enter the tablet, specifically the iPad market,
at a lower cost. It would however lock you into your iPad 3 for
two years, thus theoretically forcing you to miss or pay retail
for the iPad 4. However this is the same issue many deal with
daily with the release of new cell phones constantly.

The only reason that this may not occur is that Apple
wants to retain the value in the brand of the iPad and iPad 3. I
however believe it would be more beneficial to continue their
hold on the market. With an iPad 3 released around the $200 price
point they would be guaranteed to hold market share and possibly
gain some of what has been lost. A lower price point would also
bring the tablet market to a large sector of individuals who are
currently priced out of the market. Data fees would of course
cost overtime, but historically many consumers ignore this fact
when making phone purchases.

Will you buy an iPad 3?I would like to hear from you. It
is obvious that

free
ipad video converter can be a good partner for you to enjoy
your iPad moment.

Once you purchase your own Apple iPad 2, you will

realize that it needs a ton of apps and games. With the Apple
Store, you will be able to download or purchase thousands of apps
and games. However, many people prefer to download the free ipad
2 apps and
free
ipad 2 games. For the iPad 2, there are a ton of games
available from the Apple Store. When you compare the iPad with
the iPad 2, you will see that there are some notable differences.
The speed is certainly one of them, but so is the screen
resolution. With a much brighter and stronger screen capacity,
the games have been perfected a tab bit more.

5. Checkers

The iPad Checkers game is just like any other checker
game you would play on a board. The game is a perfect for the
iPad screen. You have enough space to see and move around the
pieces without making any misjudgments. The game has been adopted
into a high definition version, in which the quality has improved
greatly. You will have your own account and username to use with
the game. You can connect to a WiFi network and play with other
people who are online. The system has various levels you can play
on, so you can challenge yourself based on your skill
level.

4. Bub-Wider

This is more like an arcade game, as you are put to the
test through various levels and scenarios. You have to tilt your
iPad to maneuver the character throughout the game. The iPad has
3D axis system, which allows you to move the characters by simply
moving the iPad. The character you are moving is the bubble, who
has to travel through the forests. You need to make sure the
bubble avoids forests trees and bugs. The game was initially put
out for the iPhone, but it was later brought into the iPad
market. Since this change took place, the graphics on the iPad
will seem a little blurry. The graphics on the game have been
stretched, so it really does need an upgrade.

3. Aurora Feint 3

Aurora Feint 3 is a Quest type game, in which you will
be getting blocks falling from the top. You will need to line up
a minimum of three blocks in order to break them off. Once the
blocks break off, you will be awarded with points and higher
rankings. When the blocks are coming down, you can change their
orientation. By changing the orientation, you will be able to
line up various kinds of blocks. As you move onto the higher
levels, you will have to move much quicker. The game gets very
fast after level 3, so you really need to practice.

2. Air Hockey

There are various kinds of Air Hockey games available
for the iPhone and iPad, but they work best with the iPad. The
iPhone screen is much smaller, so it will be very hard to control
and move the puck. With the iPad, you have a much larger screen
to work with. The Air Hockey game is very much like the actual
air hockey you play on a table. The puck is placed on an
air-filled puck, which simply glides across the table. Using your
touch screen interface, you simply hit the puck and try to score
it on the other goal. You also have the two player mode available
on Air Hockey HD for iPad.

1. Angry Birds HD

iPad
angry birds hd has been a hit game on the iPhone and iPad
platform. The game has had an enormous amount of success, so
it has been adopted for various other systems such as the Android
and Chrome. The game is quite simply, but it takes a lot of
practice and patience. You have a select number of birds
available which you have to use to hit the blocks on the other
side. You are using a slingshot to hit the rocks, so you really
have to estimate the flying distance of the bird. The higher
levels get very hard, but it is all doable. The game is very
interactive and fun to play. You can get the game for free from
the Apple Store. If you are using a Google Chrome browser, you
can download the app and practice with it.

The software industry is moving ahead at a rapid pace at the moment - particularly on the Mac. We've seen some brilliant new applications released this year, and a few classics updated with an impressive new feature set.

Before we forge ahead into a new year, likely dominated by the onset of the Mac App Store and everything that entails, I thought it would be fun to take a look back at the past twelve months to remind ourselves of what happened.

I'd be honoured if you'd join
me in this review of Mac software in 2011. You might just find
some fantastic new software along the way!

1.Quicksilver

This single key launch
application creates a catalog of frequently performed searches
and tasks. Assign shortcut keys to frequently performed actions
and frequently opened files, folders and applications. It's more
than Spotlight (the live search feature built into OS X since
10.4) on steroids. It's like a mini-Finder and Spotlight in
one.

Some users even report that it
works faster than Spotlight. A December 2007 Lifehacker interview
revealed that the current developer does not have plans to take
Quicksilver much further, but since the program is open source,
anyone can ride to the rescue. For now though, you can head to
Blacktree, and download the latest version.

2.Adium

iChat is a great way for Mac
users to use AIM, but iChat gets a little hairier to use with
Google Talk, MSN Messenger or other chat networks. Adium is the
best IM tool available. Enabling iChat for non-AIM protocols
generally requires registering for a free account at open source
chat provider Jabber.org. Adium connects to AIM as well as Google
Talk, MSN, Yahoo Messenger, Jabber and many other protocols. Its
all-in-one interface allows for tabbed chats in one window,
smooth screename switching capabilities and skinned chatting.
Currently, iChat's primary advantage over Adium is its
well-integrated video chatting, but a video chatting plug-in has
recently been introduced for Adium as well. If you're not
convinced, check the instant messaging category - you are sure to
find one that suits your needs.

3.Mac
dvd ripper

The
free
mac dvd ripper can rip DVD to various video formats
(including MP4, AVI, M4V, MOV, 3GP, MPG, FLV) and audio formats
(MP3, M4A, AAC, WAV, OGG, APE, etc.) for playback on iPad, iPod
touch, iPod classic, iPod nano, iPhone, Apple TV, PSP, PS3,
Youtube (web), Creative Zen, iRiver PMP, Archos, all kinds of
video cell phones and digital video and audio players.

4.iSquint

Convert video files into an
iPod or TV-friendly format with iSquint, a free alternative to
QuickTime Pro. This drag-and-drop mini-app works with various
video formats including .mov, .mp4, .avi, .mpg, .wmv, .flv, and
.m4v. Help documentation is nonexistent, but the simple
application is unlikely to confuse.

5.DVD
creator for mac

The
free
dvd creator for mac lets you burn downloaded movies,
self-made videos, and slideshows into DVD disc, or to DVD Folder,
ISO or dvdmedia file that can be played with Apple DVD Player
directly. Apart from making DVD, This DVD Creator Mac offers
useful editing functions, slideshow building techniques, and lots
of gorgeous animated DVD menu styles and themes for you to create
a stylish DVD.

iPad is a very sophisticated tablet PC which can perform various multitasking works and store a lot of data in its internal memory. Like every other electronic gadget, the data stored in iPad is also prone to be lost due to simple reasons like device crash, file corruption etc. It is always recommended to backup iPad data so that you can restore the lost data from backup in any data loss situation. Now, the question arises how to backup iPad data successfully.

If you have configured your iPad to sync automatically with iTunes on a specific computer, iTunes will back up the iPad after you connect it to that computer and sync with iTunes. iTunes will not automatically back up an iPad that is not configured to sync with that computer. iTunes makes only one backup each time you connect, even if you sync multiple times before disconnecting.

If you protect your iPad with a passcode, you will be prompted to enter the passcode when you connect to iTunes. Once you enter the passcode successfully, iTunes will recognize that device as authorized and you will not require your passcode to back up or sync.

If you do not have your iPad sync automatically when connected, iTunes will create a backup when you choose to sync.

Right-click
(or Control-click) the iPad in iTunes under Devices and choose
Back Up.

If you
choose to update the software, iTunes will back up the iPad
automatically.

If you
choose to restore the software to factory settings, iTunes will
ask you if you want to back up the iPad.

After
restoring your iPad software to factory settings, iTunes will
show a Set Up Your iPad screen. If you choose to "Restore from
the back up of", iTunes makes a copy of the backup you chose to
restore from and that copy is marked in the syncing preferences
of iTunes with the data and time when the backup was
created.

If you're thinking of buying an iPod Touch then
it's important to know that it has become much more than a simple
music player. In fact, there are literally hundreds of things you
can do with it - it would be impossible to list them all here!
Instead, we've put together five unique, practical and fun uses
for your iPod.

1)

  Record Audio

: As well as playing audio, you can also record
it yourself! Simply use the inbuilt microphone for quick voice
memos, or buy a high quality microphone if you want to use it for
recording songs, podcasts and more.

2)
Sports Trainer: There are now a number of apps
to help you maximize the use of your iPod Touch when
training for sports. Most popular is the
Nike App with comes with an insert for your shoe that'll send
data, such as
calories burned, distance, pace, timing and
more back to your iPod.

3)
Read Books: Since the iPad came out, the iBooks
app has also been available for iPhone and iPod Touch. This means
you can read eBooks in a huge range of formats on the portable

device. No need to lug heavy physical books around with you!

4)
Watch Movies: You can now watch movies on the iPod Classic and the Touch, so they're perfect for keeping yourself occupied on flights, train journeys and so on.

5)
Games Consoles: The portable gaming market is really growing due to the popularity of smart phones and multimedia MP3 players like the iPod Touch. You can find a huge range of popular games, both free and paid, in the iTunes Store.

movies on ipad 2,Your iPad 2's cache is temporary storage
space on your device where recently viewed Web pages are held.
Cache allows Safari to quickly load a previously visited page
without having to reload the entire page and its images from the
Web server on subsequent visits. You may have the desire to
delete your iPad 2's stored cache for a variety of reasons. This
tutorial will show you how to accomplish that feat in a few easy
steps.

1.From the Home screen select

Apple on Tuesday, announced the next generation
iPhone: the
iPhone 4S, 3G smartphone with an improved
processor, which is designed to run seven times faster than the
iPhone 4. This will also make the device capable of running
applications faster than its predecessor. The new "World Phone"
can run both CDMA and GSM networks, with an advanced and faster 8
megapixel camera.

A new voice control feature in the new version of
the iPhone 4S is an intelligent assistant called Siri. Siri helps
you do everything with just your voice command. With this the
device exactly understands what you say, and helps you figure out
the right answer. If you want to make a call, send a message, set
a meeting or schedule a reminder, the new Siri will help you make
it possible.

For instance, if the user commands stating "What is
the weather going to be like?", then the assistant will response
such as "The weather is to be cloudy and rainy and drop to 60
degree today". It's an interesting feature that Apple has come up
with, and I'm sure most of them will find it quite
helpful.

The voice control feature not only understands what you say, but it's smart enough to know what you mean. So if you ask Siri, "Any good burger joints around here?", then Siri would reply "I found a number if burger restaurants near you" and provides a list of all the restaurants nearby.

The same feature can also be used to take dictation. Instead of typing, the iPhone 4S can listen to your voice and convert them into text. You can mainly use this to write messages, take notes, search the web, and more. You can also update your Facebook and update tweets with third-party apps.

There are a few different ways
to get photos from their source to your iPad. You can buy an
accessory to import them from your camera or iPhone, save a photo
you find on the Web or receive as an e-mail attachment, or sync
to your computer to download photos you've saved there.

To
efficiently import pictures from your digital camera to your
iPad, follow these quick simple steps:

1.Attach
the SD Card Reader or USB Camera Connector (found on iPad Camera
Connection Kit) to the connector port of your iPad.

If you're
using a digital camera or an iPhone, use the USB cable that was
originally purchased with the device and attach it to the USB
port of the Camera Connector. Check if the iPhone and camera are
turned on and make sure that the camera is in transfer mode. If
you have any difficulty setting the camera in transfer mode,
refer to user's manual for guidance. Take note that the USB port
located on the iPad Camera Connector is specifically designed to
fit cameras only and won't work on other devices.

If your
photos are in a SD memory card, the iPad Camera Kit also have a
SD Card Reader. Insert the SD Card Reader to the connector port
of your iPad and simply place the memory card on the SD Card
Reader. Remember not to force your memory card into the card
reader. If it's correctly inserted, it will readily fit into
position.

2.Make
sure that your iPad is unlocked.

3.Following
a successful connection, a Photos application will instantly
appear on your iPad screen and the stored photos on your device

will be displayed for your selection.

4.Choose
the photos you want to transfer to your iPad. If you want to
transfer all photos in your digital camera or iPhone, click
Import All. If you want to import chosen photos only, you can
pick the desired photos by tapping the small boxes on the photos
you want. You would then see a checkmark on the box of the photo
you have chosen. After selecting all the photos you need, the
next step would be to click either Import or Import All.

5.Once
your chosen photos have been imported, you may opt to erase or
save the photos in your camera, iPhone or memory card.

Once you
have finished your transfer, you can freely view your photos
organized in the "Last Import" album. To
download
photos to ipad to a personal computer, connect the two
devices and transfer the photos using an appropriate photo
program like Adobe Elements or iPhoto.

6.Safely
remove the USB Camera connector or card reader.

7.Turn
off your device. Now, you have successfully transferred your
photos!

As we all know, Flash video like FLV format can't
be played on most of devices such as iPod touch, PSP, Mobile
phones. Therefore, we developed this versatile and powerful FLV
to MP4 Converter for Mac or
DVD
to iPod touch suite for mac. This software enables you not
only to convert flash video - FLV to MP4 on your Mac but also to
convert almost all popular video formats to another one. It
supports various formats including
FLV, MPG, MPEG, MP4, VOB, M4V, RM, RMVB, WMV,
QT, ASF, MKV, TS, AVI, 3GP, MPV, MOD, TOD, etc.

Besides, this FLV to MP4 Converter for Mac is an
easy-to-use video editor. It lets users trim any clip of movie,
cropping video frame size, watermarking the video, merging
several videos into bigger one. What's more, it support numerous
multimedia devices such as iPod touch, iPhone, iPad, Apple TV,
Archos, Creative ZEN, Sansa, PSP, BlackBerry, Nokia, Google Phone
and son on. All this work just need three steps, very simple but
very powerful.

Step 1: Run Program

Run program and choose to run the iPod Movie
Converter. Then click the "
Add" button to add the FLV files you want to
convert.

Step 2: Set Parameters

Select MP4 format as the output format from the "
Format" drop-down list and then set the
destination folder to place the output files.

Step 3: Start Conversion

Click the big "

Are you still not enough for your iPad 2 battery and trouble?There are several measures that can be taken to drastically improve the battery performance of your Apple iPad 2 -- some at little or no cost to usability or convenience.We run through 5 ways you can extend the battery like on your iPad 2.

1. Charge responsibly

Most people tend to get into the habit of charging

devices overnight. While there is certainly much debate regarding whether or not charging habits affect battery life and longevity, many experts agree that over-charging a Lithium Ion battery can definitely reduce its performance over time.In other words, over time a full charge will not last as long for someone who regularly leaves his or her iPad 2 plugged in overnight as it would for someone who unplugs the iPad 2 once it is fully charged.

2. Get a second charger

This may seem like common sense to some, but buying a second charger for your office is a great way to help ensure that your iPad 2 never runs out of juice. Some people carry one charger between their home and job but it's just too easy to forget it while rushing.

3. Get a portable charger

Frequent flyers and those who spend a good deal of time on the go with infrequent access to a wall outlet should certainly consider purchasing a portable charger. The most common form of portable charger consists of a battery pack, a cable and a variety of connector tips to ensure compatibility with a wide variety of devices. While just about every option these days includes an iPad 2 adapter tip, one recommendation is the USB TurboCharger 3400 by Proporta (3400 mAh).

4. Adjust display brightness

A very simple tweak that will have a dramatic
impact on iPad 2 battery life is decreasing the display
brightness. Apple uses fantastic displays in its portable devices
but they require a significant amount of power to illuminate
them. The good news however, is that they are still extremely
viewable when the brightness is turned down. Try lowering the
brightness in
Settings ->
Brightness to between 60% - 75%, the lower the better of
course.

5. Adjust auto-lock

There has always been one universal constant for purchasers of an iPod - that they would be using Apple's iTunes to sync it. Apple's iTunes has been downloaded millions of times and is adored by many, but what if you're looking for an alternative?

In this article, I will tell you how to transfer music from ipod to pc without itunes.

Floola is a freeware application that will effectively manage your iPod's music, videos, podcasts, and photos. It is a standalone application that can be run directly from your iPod and needs no installation under Windows, Mac OS X, or Linux. The current version supports every type of iPod except for the iPhone/iTouch.

Floola supports almost all of the features offered
by iPods. It can convert incompatible audio and video files, add
YouTube videos to your device, and sync Google Calendars. With
Floola you can copy almost any file to your iPod. It is also very
easy to uninstall, which makes it worth giving a try.

Or,you can also use the
iPod
to Computer Transfer.It can allow users to easily and
perfectly transfer files from iPod device to computer, even from
iPad and iPhone. The files include Music, Movie, Photo, Book,
Audiobook, Voice Memo, Podcast, TV Show, Playlist so on and so
forth.

What did you think of the programs provided? Will
you be ditching iTunes for one of these installations? I would
love to hear your thoughts and ideas in the comments section
below.

The iPhone 4 is a touchscreen smartphone developed

by Apple. It is the fourth generation of iPhone, and successor to the iPhone 3GS. It is particularly marketed for video calling, consumption of media such as books and periodicals, movies, music, and games, and for general web and e-mail access. In our eyes, there has never been a more detailed, clear, or viewable screen on any mobile device. And it is definitely perfect to watch videos on the go with it.

The storyline for all four Toy Story films may share some similar plot lines in having the constant fear of being discarded and unwanted when one turns old, or to obsess with the thought of being forgotten and unappreciated, and almost always comes with a distance to conquer.

How to play Toy Story 4 on iPhone 4?(

There are a few tablets around my office that I have used in every aspect of my life and work. These include Android tablets big and small, a BlackBerry PlayBook, and even an HP TouchPad sitting quietly in its Touchstone dock. I have used at least a dozen different Android tablets in addition to the two I own. I use tablets heavily, and have grown increasingly frustrated over the inconsistent user experience. That is why I just bought an iPad 2.

I find the HP TouchPad to be far ahead of all
Android Honeycomb tablets as the user experience provided by
webOS is much better than that of Honeycomb. Sadly, HP has
orphaned the TouchPad, and it makes no sense to use it as my main
tablet. I need my mobile devices to evolve, in both system
capability and apps available, and that's not going to happen for
the TouchPad.

Given the TouchPad's awful situation, lately I have
turned back to the Android tablet for my daily tablet fix. The
Samsung Galaxy Tab 10.1 is a sweet piece of hardware, but it is
saddled with the mess that is Honeycomb. The same Android
inconsistent performance and implementation that drove me to the
iPhone 4S, has now driven me to the iPad 2.

How to Resolve the Technology Issues for iPad 3?
 Ever since the brands inception in 1976, Apple has
reiterated its commitment to deliver state-of-the-art high-tech
technological innovations to a global audience. In recent years,

Apple has come out as the biggest player in research and development of breakthrough technologies with its wide range of iPads and iPhones. And the multinational company is still has plenty of tricks up its sleeve.

Rumors have it that Apple tech labs are carrying groundbreaking research to develop a technologically enhanced successor to the critically-acclaimed iPad 2. The release date of the iPad 3 has not been shared by the company and neither have any technical specifications of what the high-tech gadget is expected to offer us.
Transfer ipad
videos to computer

However, iPad 3 has become the talk of the town for obvious reasons and there has been a lot of speculation going on amongst tech-savvy Apple fans regarding the specifications of the IPad 3. And some of them refer to entirely novel concepts that have neither been witnessed nor heard of before such as provision for a mobile dongle.

Here are the speculated specifications that the Apple iPad 3 is expected to boast.

A6 Processor

The last two iPads saw Apple acquaint people with
new processors and we are willing to bet our hard-earned monies
that it won't be any different. The iPad 3 is expected to harness
incredible processing capacity powered by an A6 processor that
will probably be a quad-core rather than a dual-core. Compared to
its predecessor, the iPad 2, this latest Apple gadget will pack
up to four times the processing power.

Retina Display

Perhaps the most wonderful and awe-inspiring aspect
of the iPad 2, apart from its incredible processing power, was
the amazing display screen. Apple has always been known for its
vibrant display screens that boast the perfect brightness and
contrast levels with incredible lighting. The iPad 3 is expected
to boast a 4-inch 'retina' display much like the one used in the
famed iPhone 4S.

Retina screens are expected to be so amazing that
they would put Super AMOLEDs to shame, and for good reason; they
boast a higher pixel resolution with nearly two times the full
high-definition pixel density.

At 2048×1536, the pixel resolution of the
iPad 3 screen is nearly double that of its predecessor. Retina
screens also promise a more 'cinematic' experience due to the
wider viewing angle. Add to that a huge 14 inch display and we
can safely assume that the iPad 3 will turn out to be an instant
best-seller for ardent multimedia slash gaming buffs.
