If iPad3 comes, can iPhone5 be far behind

iPhone5 hype has last a long time, there have also been rumours of a series of related appearance and message of change, in the last few months about the rumor of iPhone5 appeared again, reported its hardware specifications, appearance, features and even leaked real machine pictures of iPhone5 on the Internet.

But according to an authoritative media Japan Apple blog Macotakara said, sources revealed to its Apple from Asia in September or October in 2012 will release next-generation smart phones, and just as the same with the released iPhone 4S last year. If the news is confirmed and accurate, so that would mean time years of iPhone5 is the same with upgrades of iPhone 4S, however, published last October of iPhone 4s, 15 months later than last version release cycles, beyond our prediction of top law of December new product release cycle. For iPhone4S, many Apple fans, they just brought the new iPhone4S, they are very careful and want to provide comprehensive solutions for the protection of iPhone4S, so they brought many cases for they beloved iPhone4S, such as some unique iPhone cases.

Hardware specifications

About the hardware specifications of iPhone5, we see from iPhone 4S, while iPhone 4S published three months late, but it also has a lot of improvements, faster processor, higher resolution camera of Siri and support speech recognition application. Improvement of iPhone5 are expected to bring more, it can support 4G LTE network and a larger screen.

About the new iPhone screen size, rumors said they will maintain a 3.5-inch screen, main concern is based on the application of adaptation, iPhone5 will use the IRIS display with 960 x 640 resolution screen, rather than the currently very hot high definition resolution of 1280 x 720 or 1440 x 800 resolution screen

iPhone5 4G LTE network will be supported in network connections. SIM card, it still has a mini SIM card design.

The release date of iPhone5 is still a mystery. According to the law of release date of iPhone 4S to calculate, iPhone5 will be released in October, you can catch up with the Christmas shopping season.

For iPhone fans, in order to wait the new iPhone, they have

brought many iPhone accessories on

iphone accessories

mall. Are you ready?

Processors, while Samsung and Apple in the legal fight to continue, repeatedly because of patent problems confront at Court, but Korea factory will continue to provide Apple parts quad-core Apple device using A6 processor chip, this chip will be used as the iPad 3 and iPhone 5.

After the iPhone 4S released, insiders: "Apple is being discussed with Samsung processors A6 as processor-related issues in Apple's next generation iPhone product. "And they added:" we can see that Apple and Samsung continue to be it intimate partner relationships ".

Specifications and appearance rumor of iPhone 5 also revealed that Apple's next generation of smartphones will continue to use Sony cameras, the appearance of the iPad and mobile equipment as a whole will be more and thinner as possible. But due to the camera's reasons, become thinner or somewhat difficult, Sony has now claimed that, a new generation of post-CMOS camera built into the iPhone 5 internal, that on the premise of keeping improving, in favour of mobile phones more and more thin design.

About price

The price of iPhone 5, we know the iPhone 4S 16GB version is the retail price of GBP 499, 64GB version is the retail price of 699.

As a successor to the iPhone 4S products, we expect it to be there 128GB version, retail price was 799 pounds, about 8,000 RMB.

Comprehensive Analysis of iPhone 5

Industry believed that the new iPad 3 also suggested the direction of development of the next generation of iPhone 5. Apple's next-generation iPad 3 was released as scheduled. For Apple fans, this new product has not much change, the main improvement is that the screen resolution and support for LTE technology. However, CNET reporter Donald Bell, simply by virtue of these upgrades, Apple was able to increase competition in the tablet computer market in the chips. Through the improvement of Apple's new iPad amid speculation

that changes may occur to the next-generation iPhone.

Screen

2048x1536 resolution QXGA display support for the new iPad, this is a significant improvement, the new iPad resolution has surpassed the current all Tablet PCs and notebooks on the market. This resolution is more than 960x640 resolution of the iPhone 4 and iPhone 4S, but this is mainly due to the iPad's dimensions is larger than the iPhone. Therefore, if Apple were to increase the size of the next-generation iPhone, it will improve your screen resolution. This may not be a leap, but Apple will adhere to the "retina display" concept. Moreover can not but raise, though iPhone5 does not launch, many iPhone fans have brought a lot of iPhone cases in iphone accessories mall , they are waiting for iPhone5.

Design

Overall design of the new iPad is the same with iPad 2, which may cause some users to feel disappointed. Next generation iPhone may also keep the design intact. Despite the rumors, the size of the next-generation iPhone is thinner, or uses tear drop shape, but this is unlikely. Apple has the potential to make the iPhone lighter, but it will be on the premise of ensuring that battery life.

LTE technology

iPad support for 4G technology showed that iPhone will support this technology in the future. LTE technology provides faster data transfer speeds. Later Apple support for LTE technology is not surprising, because Apple wants to ensure that new technologies can bring about the hoped-for the user experience. Now the problem is, all United States carrier operations support LTE iPhone. Verizon Wireless and AT&T will operate this product but Sprint in this aspect of the case is unknown. Sprint is building LTE network, but may not be able to complete in a short time. Considering that Sprint fails to run 4G a new iPad, so it probably will not operate to support 4G network of the next generation iPhone.

Battery life time

Apple boldly said, new iPad battery life is up to 9 hours when using the 4G function. But LTE Mobile phone users have found, faster data network will result in faster battery depletion. Motorola moved after the launch of Raze Maxx Smartphone,

highlighting the advantages of battery life, Apple must remain competitive in this area. 4G version of the iPad may have significantly improved battery life.

Processor

New iPad still uses a dual-core processor, but the processor has upgrade from A5 to A5X. This quad-core processor integrated in the graphics core. iPhone 4S has previously used double-A5 processors, and Apple is unlikely in the next-generation iPhone upgraded to quad-core processors. While at this year's Mobile World Congress in Barcelona quad-core with an extensive Smartphone release, but for user experience reasons, Apple is unlikely to make too big a change. The other hand, the next generation iPhone may also support a strong display performance.

At last, I want to ask a question, what iPhone cases do you like? Cool iPhone cases or stylish iPhone cases?

Comprehensive Analysis of iPhone Killers

2012 World Mobile Congress has opened the curtain in Barcelona, at that time, LG, Nokia, Samsung, HTC, Huawei, ZTE and many companies will exhibit the latest products at the Conference.

Mobile World Congress, with its display of advanced nature of telecommunications systems and equipment and technical and forward-looking is the world's most influential exhibitions in the field of mobile communication. Apple iPhone5 will release in June-October of this year. A new design competition of the mobile phone market this year will be even more intense, we take a look at the one below or new device called the iPhone5 killer!

Nokia PureView808: The biggest highlight of this phone is equipped with a 41 million pixel camera, which its pixels exceeds the currently almost all digital cameras, the system is Bella Nokia Feature Pack 1. It also supports high quality audio and 1080P video. This machine uses the 1.3GHz CPU, 16 GB storage space, price is 450 euro. Nokia said PureView technology also continues to appear in the future to Nokia phones.

LG Optimus 4X HD: this phone is LG's first four nuclear devices, at the same time this is the result of LG and NVIDIA company, it uses 4-PLUS-1 technology Tegra3 chips. This phone has a 4.7-inch HD IPS screen. The actual density of pixels are 300PPI. And compared to the LG Optimus 2X, 4X HD will be smaller and more compact overall layout.

It has a strong Cortex-A9 kernel, the frequency is up to 1.5GHz, while in the case of mobile phones does not load, the kernel will automatically switch to the 500MHz in order to save power. After running in the simple, dual-core LG Optimus 4X HD compared to other devices has advantages. In addition, also it contains a 12-core Tegra chipset NVIDIA GPU, which is quite powerful in the configuration.

HTC One x: this phone is HTC chips best mobile phone in One of its configuration, which uses the Android 4 system. HTC x-carrying One quad-core processor, using the submerged fuselage design, is equipped with a 4.7-inch display screen and 8 million pixels camera. This phone also has Beats Audio technology, makes the phone sound better.

For many iPhone fans, though they have brought the iPhone4/4S and many best iphone

accessories in netshop, they still look forward to iPhone5.

Sony Xperia U: Sony Xperia U uses 1GHz dual-core processor, 512MB 8GB ROM and RAM memory combinations, runs Android 2.3 operating system (the future will upgrade 4), and is equipped with a 3.5-inch FWVGA level, with Sony BRAVIA display and touch screen technology. In addition, the aircraft also uses a 5 million pixel camera, you can shoot 720p HD video and camera support quick launch, from lock screen status to completed a photo shoot with just two seconds. As an audio and Visual Entertainment model, Sony Xperia u has xLOUD speakers.

ZTE's Era: the phone uses the latest Android operating system 4, only 7.8 mm body thickness, it is thinner. Pick up quad-core Tegra processor, has a 4.3-inch QHD multitouch screen, resolution 960 x 540 pixels.

Finally the Samsung Galaxy Beam: Samsung Galaxy Beam uses a quad dual-core 1GHz processor, running the memory at an impressive 6GB, and the 8GB fuselage is built into the storage space (can be extended up to 32GB). In addition, the Samsung Galaxy Beam running Android 2.3 operating system, is equipped with a 4-inch WVGA-level (480x800 resolution) TFT display, the camera is using a combination of 1.3 million and 5 million pixels, 720p HD video shooting at 30 frames per second. In addition, the machine also has a large capacity 2000mAh battery. It's biggest bright spot that is a bright spot at 15 lumens (lumen is the projector main technical indexes) projection function, the projection of maximum is up to 50-inch high definition screen!

If you are iPhone fans, you will be interest on the best iPhone cases, such as

bling

iphone cases and

unique

iphone cases.

Super Netbook VS New iPad

"We have a great crew that works on our dirt track," Angel said.

"The weather has obviously been a challenge to keep the track up to the standard of competition that we want to see night in and night out. And certainly come Saturday night, the track will be ready to go."

Lord of "Post-PC era" war

The release of New iPad, Win8 will be launched this year, the Tablet competition seems to be even more intense in the market, in 2012 the market pattern will have more changes.

Apple has now sold more than 172 million "post-PC era" of devices, including iPod, iPad and iPhone, which already accounts for the company's total revenues of 76%. The iPad has sold more than a quarter on any number of PC manufacturers that sell PC.

Apple's Chief Executive, Mr Cook stressed: "Apple will unswervingly committed to the future of the post-PC era, here to make our advantages into full play, and this is our passion.

â

"Post-PC era," the word is all traditional IT giant Microsoft, Intel, Hewlett Packard, such as associative enterprises to fear. Because Apple created a post-PC era, all advantages of these traditional IT giant original destroyed, we all to zero on the starting line, Apple has long been running out very far. For many Apple fans, iPhone is an essential tool, they have brought many best iPhone cases.

iPad only accesses to information content, and not to create content. Apple has introduced a new application to refute this view. These new applications include new iPhoto Mac photo editing software. What Apple will do next is unclear, but Apple also wants to break the boundaries of intent, which is very clear.

Tablet market will have a greater change this year. IOS and Android are two major systems, but the Android system is not able to play in the enterprise. Now the Tablet market, Apple is the absolute leader. Including Samsung, Amazon and in the second, third, are not themselves a solid position in the Tablet market,

the market shares of other enterprises is pitifully small.

Microsoft and Intel want to flag tree now, some of the traditional IT companies will respond positively, Android camp could be divided.

Tablet market will appear iOS, Android, Windows three camps of opposition, but as cross-border products will be more and more, changes in the rules of the game, three camps will line up again.

In 2012, Apple will be broken in a single situation, but the new pattern will not be broken down in a short time in the forces.

Due to the success of iPad, Apple became the indisputable leader in the Tablet market. ISuppli market share data showed in 2011, Apple accounted for 62% market share in the tablet computer market share, followed by Samsung Electronics, market share is 9%.

Investment consultants of ISI Group analyst Brian Marshall that Apple's overall gross profit 85% from--iPhone and iPad, iPad is very important part of Apple products ecosystem. Apple iPhone will be launched this year, though many iPhone fans have brought iPhone4S and iPhone accessories, such as

cool

iphone cases and

cute

iphone cases.

Finally, the anticipation is over, Apple recently unveiled its latest iPad version - the new Apple iPad. Plain and simple, the new iPad. Apple decided to do away with the numbers while everybody is gearing towards an iPad 3.

In a nutshell, the new iPad comes with the following features:

?4G LGE wireless data connection and a super high-resolution âRetinaâ display, 2,048 by

1,536 pixels, A5X processor, with a quad-core graphics system, iSight camera (on the back) with auto face detection, auto exposure lock, and auto focus lock. It also records video at full HD resolution (1080p) and supports voice dictation.

Apple iPhone is well ahead of its rival

With the new iPad, more commonly referred to as the iPad 3, announcement out of the way, all eyes will now be focused on the iPhone 5. And if you think the buzz around the iPad 3 was big, wait until this summer. Apple left fanboys from all over disappointed last fall when they announced the iPhone 4s. Many thought we were in store for the iPhone5 last year, but Apple kept us at bay and only announced minor adjustments to the iPhone â most hyped was of course the launch of Siri. Here are the latest rumors for the iPhone 5.

Sweden mobile case Krusell enterprises provided a report, summarized the best selling mobile phones in the world rankings in February, 2012. Apple iPhone4 and 4S ranked first, but most attention in this list are Samsung and Nokia. Samsung has 3 smartphones in the list, Galaxy S2 hang on to second place which has listed nearly 1 year, and Nokia's first Microsoft Lumia 800 mango also squeezed for the first time in the top 10 best-selling mobile phone list.

First: Apple iPhone4/iPhone4S

iPhone4S is the upgrade version of iPhone4 (the "4S" is "for Steve," another is English "Speed" abbreviation). In October 2011 by Apple's new CEO Tim Cook on launched in the Apple product fall release. On January 13, 2012, the first exclusive introduced in mainland China by China Unicom iPhone 4S sold. On January 29, 2012, according to the China Telecom insiders, has recently issued to provincial branch of China Telecom Group, requested iPhone4S presale ready around the Hall after the lunar new year, can provide to the user iPhone4S reservation in the near future. What is more, due to the hot iPhone4/iPhone4S, it has also driven up iphone accessories mall.

Apple iPhone 4S also carried the latest version of Apple's iOS 5 operating system, its characteristics has more than 200 improvements and promotion compared to the past iPhone 4 product, and with the help of new iCloud service features, is to allow users to use the Internet to have their information stored on the server-side, and share it with all iOS 5 device.

Gartner, an industry research company, said last Wednesday that Apple beats Samsung Electronics as the top smartphone seller worldwide in quarter four of 2011. According to Gartner, during the last quarter of 2011, Apple's sales reached 35.46 million and got 23.8% of the market share. This rate is an increase from its 15.8% share in the past year. On the other hand, the sales of Samsung reached 34 million during that same quarter.

Second: Samsung i9100 GALAXY s II

Samsung GALAXY s II HD LTE features a 9.5 mm slim body incorporates powerful features not only loaded HD 4.65 inches Super AMOLED touch screen, but will also raise the resolution to 720p (1280x720 pixels) level, with 180 degrees of Visual angle and 16:9 appear effect, and the screen's pixel density is reached 316ppi, it brings more impact visual effects for users to browse the Web and watch video.

Samsung GALAXY s II also used the Exynos that based on ARM Cortex A9 dual-core architecture 4,210 dual-core processor, not only has the more powerful computing power and speed, but more than power. In addition to carrying the latest Touchwiz Android2.3 gingerbread system and 4 out of touch interface, the machine also uses a dual camera design, with 8 million pixels can shoot 1080P full HD video cameras and 2 million megapixel front-facing camera, supports video calling feature.

Third: Samsung GALAXY Nexus

Galaxy Nexus (also known as Google Nexus Prime, Samsung i9250), as Google's third-generation mobile phone, Samsung i9250 (Galaxy Nexus) system version will also be upgrading, carry is rumored be released in October of this year's Ice Cream Sandwich (Android 4) version of the system. Features it has a beautiful interface, and provides more advanced App Framework frame support, both in the running speed is increased 1.8 times than in the past. Compared with iPhone, Samsung GALAXY Nexus still have many improvements, besides, many iPhone fans prefer to buy many iPhone cases to protect their beloved iPhone, such as metal iPhone cases and unique iPhone cases.

This machine is the first space flight Android4.0 new system models, featuring mainly include upgrading the Linux kernel, and optimized for multi-core processors, system running speed has been improving, with newly designed touch interface, and provide a more personalised experience, support for face recognition and a new version of the Android Market or download provides audio and video resources, and so on.

Fourth: Sony Ericsson Xperia Arc s LT18i

S-LT18i brought about by the Sony Xperia arc technology to mobile's first 3D sweep panorama shooting mode, users can, through HDMI output to 3D shooting 3D photos on the TV to watch, share with friends and family a revisit, experiencing its King of the stereo.

Xperia arc s is equipped with Mobile BRAVIA Engine super impressive 4.2 inches high resolution screen of the Qing dynasty, and 8.1 million pixel touch-focus and HD video recording capability, built-in Sony Exmor r for winning technology-high and low noise image sensor, keep your mobile phone in the dark environment , you can still capture high quality photos and images.

The biggest phone manufacturer worldwide was still Nokia, claiming 23.4% of mobile gadgets' market share, a decline from 27.1%. But Samsung is getting closer to Nokia with 19.4% market share, an increase from 17.5%.

With the large iPhone market share gains in quarter four, the world's third biggest mobile phone retailer was Apple. In addition, Apple did much better than LG Electronics of South Korea.

Do you really understand Apple iPhone4

The new iPhone 4S heart rate monitor called the Wahoo Blue HR strap is now available at the Heart Rate Watch Company. This strap saves you money because it requires no adapters to receive heart rate with your iPhone 4S. Just get an app and go work out.

Even as old jobs, with the release of next-generation mobile phones, old iPhone4 was retiring, 5 disadvantages in the below, we'll look at it, looking forward to a new generation of iPhone5 will be improved.

Signal problem

When you truly held iPhone4 when its signal will be a hit, this is indeed a big problem for a mobile phone, although by the late signal rings, stickers and so on remedial measures, but is still not satisfactory.

Recommended models: Motorola XT883

As a veteran of the communications industry, Motorola's signal is good. Motorola XT883 in network is supported on 3 network mode, such as GSM,WCDMA,CDMA2003, supporting frequency bands include: 2G:GSM 850/900/1800/1900 3G:CDMA EVDO 800/1900 3G:WCDMA 850/1900/2100MHz. There is no pressure to go travel the world with the mobile phone.

Apple iPhone is coming, more and more iPhone fans are looking forward to it. What is more, they have purchased many cases, such as leather iphone cases, stylish

iphone cases and

bling

iphone cases . I like the cool iphone cases.

Motorola Defy+ uses the standards of IP67 protection design, can effectively prevent dust and water attacks. With a 3.7-inch touch screen at a resolution of 480x854 pixels, supports multitouch. Run memory processor is equipped with 1GHz and 512MB, keep pace with the latest Android 2.3 intelligent systems which run very smoothly.

In addition, the machine also built a 5 million pixel camera, GPS, WIFI, Bluetooth are readily available.

Home button is too easy to

Only a Home key on the iPhone4 that is responsible for an important task, exit the program, screen, toggle the background screen, and so on, thus began the long time Home key insensitive or even worse.

Battery life is not enough

Many people complained that the iPhone4 battery is not enough, playing games and see a film is to run up, it's not completely to blame Apple, which has become the modern Smartphone problems, powerful hardware is associated with low level of battery life, and focus on simple communication often long battery life of mobile phones.

The appearance modeling of Dell Mini5 is alternative, because the machine of measurements does very large, its screen size has reached 5 inches, equipped with has WVGA standard of 480x800 pixel resolution, picture quality also is good, fuselage back placed a star 5 million pixel camera, support continuous shooting and video shooting function, imaging quality is was satisfaction, system area is carrying Android intelligent system, common of wireless WIFI, and Bluetooth, and GPS, function is ranging.

Body materials is friable and not strong

iPhone4 used a glass material for the back cover, this design was very beautiful, but it brought another problem that was easily broken. In everyday use when accidentally dropped on the floor, rear door will break off. Though many iPhone fans have brought all kinds of

best iphone

cases, their beloved iPhone still suffer some accident.

To recapitulate, at present the only devices updated to iPhone OS 5.1, which you can apply Jailbreak (tethered) are equipped with

a processor that Apple A4 or earlier-that is, iPhone 3G, iPhone 4, iPhone 1, 3G iPod Touch 4G and iPod Touch. For now there is no way to apply Jailbreak iPhone in 4S, iPad 2 and the new iPad, but as we said developers are already working on the solution and the prognosis is favorable. But, as always we recommend that it is best not to upgrade to iPhone OS 5.1 to have not been released to unlock tool Untethered mode.

The iPhone Dev Team has good news for users of the iPhone 2 and for those who will buy the new iPhone model. According comment on the method of applying the iPad 2 Jailbreak four months ago still running in IOS 5.1 so that the predictions of a Jailbreak for this model are positive. The process of speaking is not the ultimate solution but if that is the most important step to achieve the Untethered Jailbreak. Furthermore also ensure that this process could be applied in the new iPhone, so that users think are likely to buy the release will come soon. On the other hand, the hacker i0n1c yesterday issued a series of images of an iPad 2 with Jailbreak applied, which not only reinforces the idea that this time will not be so complicated they get overcome the defenses of this model.

Tech you how to choose the Best iPhone Accessories

It's the nightmare that haunts the dreams of every iPhone user - the dull crack of iPhone hitting stone floor, face down, and the spreading, numbing horror of seeing your once beautiful iPhone now so marred by unsightly spider cracks.

A case is clearly a required investment for the butter-fingered iPhone owner, so we had T3's fashion department tap all their catwalk contacts to produce a list of iPhone 4S cases even the most sartorially-minded Apple fan will fall in love with. Click through to the link below to see what they uncovered.

Classic games iPhone cartoon case

As a child, the red-white game left a deep impression on us, to introduce below this level of protection is based on the childhood of classic games as a pattern in red and white machine, not only cute and memories that can be brought to us.

This protection case is adopted with plastic protection of borders and the metal back shell design, this design makes the protective shell of feeling better, for the protection of the phone

itself is more comprehensive, users no longer need to worry about protection problems bad cleaning after dirty. Keys for mobile phone at the borders open, which is compatible with iPhone4 and iPhone4S.

Do you like these

unique

iphone cases ?

Feature-rich iPhone leather protection package

Contained here are the parts of a case zero-wallet, business card holder, card packs, and other features, coupled with the selection of quality leather material, makes the case looks great grades, and is suitable for business people, with this case, card holder and contacts can be saved.

This case is adopted with real leather, feel very good, are more durable, protective sleeve has two cards, can ensure the phone is wrapped firmly. In addition to mobile phone pocket, in case there is a pocket with a zipper, can be used to change or some bank cards, and one open Pocket you can put some of your business cards, in one fell swoop, it is very convenient.

Stylish laser technology iPhone keyboard

First to introduce the external keyboard, which is full of a sense of science and technology, and it is different from that we used to see, this add-in iPhone keyboard, the keyboard is not a physical keyboard, but on a projection keyboard projection on the plane, this laser keyboard looks very cool.

The keyboard was manufactured by ELECOM, we can see in the picture, the laser head hard keyboard size is very small, in carry, by using the projection, projection keyboard has a larger size, making it easier to use. Red laser makes it easier to use in the dark.

Keyboard connection via Bluetooth and mobile phone, can also be connected through a USB interface with the computer. Built-in rechargeable battery in the projection equipment can be used for 2 hours for the user. The projection keyboard Bluetooth in the Japan market, priced at 28,875 yen, approximately 2,180RMB.

Full Texture iPhone metal base

Now to introduce the parts of iPhone4S is a base, from the overall look, the base is still full of sense of science and technology. Joined the internal speaker on the base, you can have the phone plays music sounds better, connecting phone base, you can to charge, also ensures that the phone's standby time. If you want to learn more information, you can check out it on

iphone accessories

mall.

The base name for the Ideal Timepiece, is made from aluminum materials, simple appearance, is nicely with the iPhone4. Users can use the base built-in microphone for hands-free calling. Base the data hidden behind hide data cables also plays an important role in appearance. Now the base is still in the design phase, its designers said postpartum in the base price will be about \$ 89.

Double Capacity iPhone USB drive protective sleeve

Many Smartphones have the functionality to mass storage, many users are accustomed to some information carried in mobile phones, but the iPhone does not have such a feature, you can take a look at this case, it can help you to carry the information with you.

This iPhone casing is made by Makrolon, is different from the normal shell that the shell is joined on one storage device, is equivalent to a 8GB Mobile Shell installed on the USB drive so that user data can be saved to the USB drive, and then carry away. The sleeves have a variety of color options, priced at \$ 42, which means you only need to spend around \$ 300 to get iPhone4S mass storage function of the increase 8GB, iPhone4 are also available, of course.

Cute profile iPhone protective holder Cup

Here the case is interesting, from the back view looks like a Cup, however you can not be fooled by its appearance, seen from the side, you can see, this protection is only half a Cup. This kinds of cute

iphone cases , let you can't help to buy it.

We can see from the picture, this case is very cute, is more suitable for female users. In case Cup on the back of the handle is not a decoration, it can also seat brackets. The handle tie round the body can provide a very good support for mobile phone, in addition, it can also be used as a bobbin winder. A variety of bright colors can be selected for this protection cover, it is compatible with iPhone and iPhone4S, priced at \$ 22.

Do you ever wish that your iPhone could look a little bit more luxurious? Sure, the reflective shine on its metallic back is great for checking your teeth and hair before a meeting, but what could guarantee you a follow up meeting is whipping out a leather-bound iPhone 4 to schedule it in! Here I have compiled a list of ten excellent leather cases for the iPhone 4.

Newest Ten Unique iPhone Peripherals in 2012

The remarkable iPhone has been an inspiration for producing accessories that executes tasks of every sort. There are so many products made for iPhone that it is difficult to keep track of it.

The kind of iPhone accessories depend on an individual's choice and interest. If you are a music fan or need high quality sound, then you should surely buy the Bluetooth headphones. The Bluetooth headphones are hands free, so you can use it while driving too. Since, iPhone is an expensive phone, you must do all you can to protect it from damage, especially external ones.

Retro Speaker Horn

It is recommended for everyone today that is the largest and strangest iPhone accessories, rusting the vicissitudes of the copper skin shows it, it would be to line metaphor it was brilliant, don't get me wrong it is not antique things, comes from the hand of modern designers. It is the role of loudspeakers, clever use of sound diffusion characteristics of building. But what I wonder is: iPhone sound is not big enough? Even if you really need to buy a dedicated speaker volume, are everywhere in the market, the price is much cheaper than it.

iPhone special tripods

Most do not understand things. Mobile phones joined the camera is easy to capture life's little, does not need any professional equipment, such as tripods, lenses and the like.

Heat-sensing iPhone shell foil

Heat-sensitive material, induction temperature can change color, this material is not uncommon, but when using this for the iPhone shell foil does not know who came up with the trick. It is quite interesting, but not beautiful. Haven't seen on the street now have at least a few people use it, popularity can be predicted.

All kinds of strange bracket

If you think the iPad is heavy, you need support, which can also understand, but light mobile iPhone do you need? Although these form are attractive to many people, nor does it represent a fun thing, but something really easy, relevance is not strong. But iPhone

dustproof plugs are essential tools.

Wind power charging of iPhone-specific equipment

What? Charge is free? This special wind power charging device

for iPhone is really interesting, I also have ventricular tachycardia, but thought, can you guarantee charge when there is wind? And fans where is appropriate to put, charging effects and so on, there are too many problems. That is only if you live or work at any time where there is wind and wind is not weak, this equipment can be used. It only can be described as good idea but is the actual chicken product.

Mimic the manual modeling iPhone4 case

I do not know why so many people respected that mimics the iPhone4 case staffing model, look it, I do not feel too comfortable, a bit creepy. Will not speak in your Pocket does have such a great place to hold it, even you can put it on your bag, do you have the courage to take on the street out of the iPhone? Ms may be its only purpose is to put it in a bag, if there is a thief, he will startle it! For me, I think for many girls, they like the bling

iphone cases best.

Delicious mobile phone shell

When the first time, I see this series of rice with eel, sushi is real, really exquisite workmanship, but so exquisite and pull the wind shell there is a fatal weakness, too big! Carrying mobile phones, especially these men who likes to put iPhone in his pocket. Conclude that is not practical. If you want to learn more best

iphone cases, you can go iphone accessories mall.

IPhone r/c helicopter

There is no force majeure to this model, like most Apple stores selling remote control fan, four motor and four fans, Apple devices can be used to control, and there are two cameras, two or more can even simulate the air war. Unfortunately, the price is equivalent to more than 2000RMB, it could not bear. Good price this time also can use the iPhone to control the aircraft appeared, price is only around 300RMB. Looked and found that action only 10 feet distance (too deadly, buses and planes accidentally out of range), but does not have a camera, is actually an ordinary remote control aircraft, only Apple device control, Oh no way, give it.

It may seem crazy to have an iPhone accessory that's several times bulkier and much heavier than the iPhone itself. You can't argue, though, with the smoothness the Steadicam Smoothee brings to iPhone video. It relies on the same principle as the costly professional Steadicams used for smooth-tracking handheld shots in the movies—creating inertia that makes the camera

harder to shake. The Smoothee has a ball-jointed handgrip that keeps the iPhone perfectly horizontal and jiggle-free as you move it up, down, and all around to your eye's desire.

Best iPhone Accessories Mall

The white cord and 30-pin dock: They've been a fixture on the Apple iPhone since the launch of the first-generation device, in 2007. But according to the tech site iMore, Apple is considered ditching the old dock, and replacing it with a smaller connector, which would purportedly debut on the iPhone 5 - a handset expected to launch later in 2012.

The iPhone4 is designed by iNoxCASE stainless steel protective shell, weight is about 53 g, in order to protect phone from shell scratch, designers in mobile phone inside the shell by adding a layer of felt, it will not be hurt even if the phone meets some bumps. Most distinctive is the phone screen design with a protective cover, leaves a gap in the protective screen cover, and user-friendly without open protective cover case see the caller ID and phone time, this design is very intimate. Currently this protective shell has black, gold, silver, Rainbow, and Realtree camouflage of five color scheme, in addition to the Realtree camouflage is priced at \$ 69.99 (RMB 447), several other phones for \$ 59.99, about RMB 383.

Protection of comprehensive iPhone food protection that you can eat

Here's the protection of some alternative, see the appearance of many users should be curious about why is the common design with another kind of detached, alternative here mainly refers to the cases of material, this phone is made of edible gum. For me, I prefer stylish iPhone cases.

This is designed by Korea, protective case is made from edible gum, can be edible. The protection cover has a total of five colors, representing five different flavors, pickles, pink orange

representative on behalf of black tea and so on, do not know if this is the true symbol of taste or just a color. Case thickness of 4mm, without being eaten can be very well protected mobile phone security.

Inspiration from the engine cylinder gasket iPhone4 case

We first take a look at the normal point of iPhone4 protective shell, the first introduced metal iPhone4 protective shell that is made by id America. This protective shell of inspiration comes from the car's high performance engine, users who like cars for this level of protection should feel what is a special favor. If you want to find more cool

iphone cases, you can go iphone accessories mall.

The protective shell from the back, it's like the engine cylinder gasket, protecting shell is used with aluminum, using the drawing effect than smooth surfaces of metal for fingerprint prevention has a very significant effect. Inside bearing the suede material, prevents wound to the mobile phone protected shell, suede material also have certain effects on impact cushioning. Currently this protective shell has silver, black, gold, bronze, gray five colors, and each is priced at \$ 29.99, about RMB 191.

Retro and low profile combined with iPhone4 mobile protection

Mobile is now disappear from the market for a long time, but you may also see someone holding a cellular phone on the road again, this is not that mobile is back, it is most likely an iPhone4 to disguise. A mobile iPhone4 protection of exterior shell allows you to experience the feel of the previous generation mobile.

This protection is in place of the mobile protection shell for iPhone4, super thick casing ensures the safety of mobile phones, mobile phone touch screen only gel on the outside. Protection reserved the position of the iPhone's Home button, wear a protective shell does not present obstacles to user actions. This protective shell is compatible with iPhone4 iPhone3GS now, this level of protection is priced at \$ 21, about RMB 134.

Light weight and hardness iPhone hedgehog to protect border Here is the protective shell of metal frame, which is designed for the KIROIC, we can call it a hedgehog, around border a raised looks very personality, so alternative designs as well as the protection of borders has attracted enough attentions.

This border protection uses the air levels of aluminum design, light weight, hardness, as a phone to protect the border, it is very reassuring for protection for mobile phones. Border with multi-angle cutting, although surrounded by spiked, but does not harm to a user, the border is very smooth and rounded, fingers can hold in the protection of the borders of the depression, feeling

pretty good. This protected border has four colors, black, gold, silver and bronze, priced at \$ 95, about RMB 607.

Metallic package protection full iPhone4 stainless steel protection case

Basically, the present case is to protect the border of the cell phone, and the phone's back, here's the phone shell protection not only to those parts of the previously mentioned, or even mobile phone screens are protected, protection is very comprehensive, and mobile phone uses metal material, looks very personality. For some people, they like metal iPhone cases best.

In related news, buzz around the next iPad â presumably called the iPad 3 â continues to ripple across the tech press this week. It's a good bet that the next Apple slate will have a "retina display," a better processor, and maybe even 4G support. But it probably won't look a whole lot different than the current iPad 2: images recently posted by MacRumors show a very familiar casing and frame.

(no subject)

Apple iPhone is the most popular electronic products in recent years, walking in the street many people who use iPhone can be seen everywhere, it has become recognized common cellphone. Popular iPhone was also driving around the markets, such as mobile phones, variety of iPhone mobile phone shell now, businesses are naturally not miss this great opportunity to salvage gold. Recently, the United States well-known trend Distinct Life and brand of mobile phone accessories iPhone 4S Case-Mate jointly launched a ' Barely There ' series camouflage enclosure, there are blue, green, red, and Brown four color version, and the shell pattern is used in the camouflage of the Distinct Life iconic elements. This shell has been on sale, interested friends can go to the official website of the Distinct Life view sale information. I think there are best iPhone cases will be launched, for Apple iPhone5 is coming.

According to the Korea media reports, Apple iPhone5 is listed in this summer, will have a greater degree of 4.6-inch display. From a Korea newspaper reported that new iPhone and its fanatical competitors like Samsung Galaxy S2--Android system, it is learned that Korea media has always been reliable, product-related information such as size, date of high accuracy, this is due to a lot of Korea company is a supplier of display of high-tech equipment, accessories, including Apple.

Apple planed to launch a 4.6-inch screen mobile phone in next generation products, has ordered to the vendors, at the same time, Korea supplier LG and Samsung refused to respond this message. This is since 2007 the first touch-screen Panel, Apple, reason because the competition for the first time, adjust the design, and iPhone sales accounted for half of the total sales of Apple products. Samsung, as a strong competitor of the Apple, new Galaxy s II cell phone released in April last year, uses a 4.6-inch OLED screen design.

Next generation iPhone 5, everyone has their own most perfect configuration. Recently, ADR Studio also brought us the best iPhone 5 in the eyes of their configuration, as well as the next-generation iPhone concept renderings.

Next generation iPhone 5 will abandon the use of SIM cards, you get data directly from your mobile operator, which is 4G on the LTE network for data interaction. In addition, the design of the next-generation iPhone 5 will cancel the home key, at the same time will use aluminum panels on the back of the fuselage, this next-generation iPhone will be more lightweight.

Next generation iPhone 5 similarly equipped with Retina the retina display. Displays all your network at the top of the screen, clock, notifications, and other information, the task bar will appear at the bottom of the screen and a virtual home key, the center of the screen is still the application interface.

The border of next generation iPhone 5 will install a unit of the fuselage of a LED display system. You can use it to display the strength of the battery life, or show you a preferred caller.

There's even a dedicated LED application edge will allow you to customize the LED color.

If you want to learn more information about unique

No one can beat Apple iPad3

According to BusinessWeek, with the introduction of the iPad3, Apple iPad Corps will be enlarged to become a killer PC.

In early 2010, Steve Jobs released the iPad in San Francisco, he spent a few minutes after the meeting, asked those who used that have any idea. One reporter said, it might make consumers forget why you want to buy a laptop. Jobs shrug said: "we will see." In predicting trends and creates trends, Steve jobs is a master. If the Tablet has finally really destroyed the laptop and desktop, Steve Jobs ' harvest decision numerous Fortune for Apple.

The day has arrived, on March 19, and Steve Jobs ' successor Cook decided to send income buybacks, also announced a new iPad's first weekend sales of 3 million units. Piper Jaffray expected in 2012, is expected to bring \$ 38 billion revenues. 2011 quarter, Apple sold 15.4 million iPad, more than 1 time sold by HP PC. If

the iPad acts as a PC, Apple is the biggest PC manufacturer.

Most dramatically in the iPad era is that Apple can completely control the market. In 2007, when Apple launched the iPhone for the first time, there are many Smartphones on the market, then quickly attract new competitors, most of were Android devices. Track iPad were different. While Samsung, HTC, Motorola, HP, Dell and other companies launched the Tablet, iPad still has a 66% market. Robert Brunner is Apple's former head of design, now control the design company Ammunition operating group. He said: "the whole industry has gone mad, look at how many people compete with Apple know. In their eyes, there are full of fear. â

For non-Apple camp, part of the problem is caused by the burden of history. Major mobile phone operators have no PC experience, such as HTC and Samsung. For PC manufacturers, in the 19th century and the 90 's, when Intel and Microsoft-led, PC makers have little choice, only focused on reducing costs, the fee paid to Intel's Pentium chip, Microsoft software, try to maintain profitability. HP PC Group executives before Kerry Chrapliwy said, HP and Dell, if the product does not become a sensation of beauty, will soon be cut off. He said: "at HP, we have been fighting with a philosophy: ' how to get the product on the market to keep prices as low as possible, as high as possible shipment?' There is not enough focus on user experience. â

Now Apple iPad3 and iPhone5 are coming, many Apple fans are looking forward to them, which driven peripheral development, such as cool
iphone cases , bling iphone cases,
luxury
iphone cases and so on.

Instead, Apple is different. Elevation partners founder of sci-tech investment Roger McNamee said: "Apple has a global vision, he would say: ' we will take 3-4 years, make things come true.' "9 years ago, started thinking about Apple tablet computer, when jobs saw engineers, progress has been made on a multitouch display. Users can do many different things, such as read the article, watch the stock market, no need to start the machine. When Steve Jobs made first concern, iPhone will be flat on the table. When returned to the flat again, it can turn on iPhone iOS software, App Store to introduce tablet. Combine them with battery time, display quality

that consumers become familiar with, and new products.

Windows 8 Tablet will exceed Apple iPad3

According to recent media reports, Windows 8 system requirements for the end product of parameters included in a special display, which means that some carry Windows 8 systems product looks better than Apple's so-called can reach (or exceed) the eye Retina display of the level of recognition better discs.

Reported about Microsoft Windows 8 development blog recently said that this latest operating system support to 291ppi (291 pixels per square inch) for the resolution of 10.1-inch Tablet PC screen, want compete with the new iPad (or iPad 3) 265ppi one of the display's ability.

Of course, since Microsoft does not set foot in hardware manufacturing, so they do not require flat panel display products or other related products must comply with the standard Apple iPad Retina display technology, which means that this technology also depends on the hardware manufacturer of the product.

According to Microsoft company Windows system user experience sector of one senior program personnel David Washington said, carrying Windows 8 of Terminal products of display only needed meet three species percentage zoom ratio of standard on line, and so of requirements is guarantee for Windows 8 write of various application to in entire Windows 8 ecological ring in the General, avoids to appear due to display size differences and brings of displayed effect mixed of problem. So, as long as the manufacturer produce screen can display, which meets the minimum requirements.

Accordingly, powered by Windows 8 system screen resolution minimum requirements of the Terminal product is 1024x768 pixels, which is the minimum of the whole user interface layout is the most fundamental requirement, it is same with most Web resolution, consistent with the majority of Windows 7 users.

Washington also said that with increasing pixel density, each pixel dimensions must be smaller, if not properly adjusted, then show up in the application's image and font size may be too small

to read, because its display resolution is greater. So, before we mention "the percentage standards" will be able to play a role, in screen resolution it can constantly improve our processes ensure that the pictures keep in an appropriate proportion, ensure that the text remains legible size, accuracy and ensure that other shows keep touch.

The three so-called "percentage criterion" include 100% and 180%, if developers write applications consistent with the scale requirements, then the application will be any demand for a minimum pixel Adaptive display size of Windows 8 on the end product. Refer to Washington: "because the three scale standards are clearly established, so developers in any kind of scale standards made under the picture fuzzy and can avoid embarrassment."

Microsoft officially released the Windows Phone operating system in the Chinese market in the near future. Microsoft hopes that Windows Phone Tango systems attract price-sensitive smart-phone users in China. However, Apple iPhone is coming, many Apple fans are looking forward to and prepare to buy iPhone, even they have bought many luxury iPhone cases .

Apple and Google are currently regarded as smart-phone business growth in China for the next source. It is expected that China will become the world's largest smart phone market in 2012.

Microsoft is currently in the United States 2-3 years behind the Smartphone market, but Microsoft still has more opportunities in China and other emerging market share. IDC estimates that by 2016, Microsoft's share of the Smartphone market in China will reach 20%, above the Apple 16%. However Windows Phone over Android is quite difficult, which has achieved a high market share in the Chinese market, lots of cheap smartphones use different versions of the Android system.

What must Computer Giants Do

A few weeks ago, we told you guys about PhoneDog's new "Official Smartphone Rankings." Basically, it's an awesome way to check out what experts and consumers are saying about hottest smartphones.

And the coolest part is that you can vote and have a say in a device's ranking. And now, there's even more incentive to vote.

PhoneDog is counting down to 5000.

Regardless of size, for science and technology enterprises, should be on prospect next year's at the end: error prior to the amendments, improving the performance of existing and introduction of better products. For all companies in the world, a new year means a new start. For the RIM, and some companies such as HP, this is undoubtedly a good thing. This year is a very difficult situation, if measures are not taken to 2012 year, it will continue to be in danger of passive. In the other hand, Apple and Google look set to continue success. Their 2012 strategic focus should be on maintaining the status quo.

1, Tim Cook needs to show that he can be the next Steve jobs
Apple CEO Tim Cook must be in 2012 to make a difference. In 2011 from Steve Jobs took over the work, and Apple basic have relied on inertial operation, mainly thanks to consumer demand for iPhone and iPad. Cook needs to maintain this momentum. But more important is that he has to prove that he can be the next Steve jobs. It's not easy, but in 2012, he has to try.

2, HP must address many concerns

For HP, it is difficult to separate lists the 2012 thing needs to be done. The company has faced a number of difficulties, including the management upheaval and the product concerned. In 2012, the company's CEO Meg Whitman needs to clearly understand what are the HP's unique--PC or Enterprise Services? And then focus on this development. Otherwise, the HP will turn into deeper trouble.

3, Apple must launch real iPhone 5

In 2011, the technology industry were talking about iPhone5 that tare equipped with features, Apple has just released iPhone 4s, to simply upgrade the previous generation products. In 2012, Apple needs to release iPhone 5. Now many iPhone fans are looking forward to iPhone5, even some fans have bought some best iphone cases, such as luxury iphone cases, cute

iphone cases and so on.

4, Dell needs to be moved from the area learn

Review Dell Mobile experiences, you will be found, the company completely at a loss. Both light dead smartphones are becoming the laughing stock of the Streak tablet, it is easy to come to a conclusion: Dell Mobile needed upgrading. Hope to achieve in 2012.

5, Facebook must be listed

In recent years, Facebook's IPO (initial public offer) has been much looked forward to the outside world, but investor disappointment every year. In 2012, Facebook must be listed, and through the successful realisation of own funds. Would not only benefit the employees and shareholders will also have a profound effect on the Internet industry. Facebook will be the next Google? 2012 will solve mysteries.

6, RIM should sell mobile phone business

After withdrawing two CEO, RIM should also sell mobile phone business in 2012 year. Whether they are willing to or not, RIM must understand that, first of all, it now is a service company, others are minor. Many enterprises are willing to buy the company's hardware manufacturing business. Although the premium may not get as high as last year, but it's best to make decision and move forward as soon as possible.

Can Apple Continue to be successful

Apple iPad3 and new Apple TV have now published! We all think that the improvement of iPad3 and APPLE TV are very small! Apple before employee Micheal Margolis he recently revealed an interesting message on Twitter: the Apple TV interface is rejected jobs five years ago.

He expressed dissatisfaction on interface design. He said on Twitter that "most of the interface of the Apple TV 2 is that I implemented many years ago. New Home interface makes me cry".

Then, he said, is now the new design jobs have rejected, "an interesting fact â the new design was abandoned five years ago, because Steve jobs does not like them. Now no one say to bad design ' no ' . "

iPad3 thickness and weight of the compromise. Jobs with great confidence said âTHIN FAST

AMAZINGâ when the iPad2 released, Tim Cook said the dared say to everyone "FAT,FAST,FUCK (Proview)" generally thin is no longer the iPad3 highlights, Apple lead the trend of this retreat in the boom, it's just not understand. Pursue once the hardware is powerful Android style, now Apple with the wind, though more powerful A5X processor, but the battery drain faster, so increasing the capacity increases the thickness of the battery weight, it's hard to believe that Apple would meet the operator support LTE4G network, the end result thickness increases. This is Apple to compromise achievement of the process performance. One has an exclamation point after Steve Jobs, Apple is not an ancient unit of weight, but in fact that is the Apple. Now iPhone5 is coming, many iPhone fans are looking forward to it, even some fans have bought many

best

iphone4 cases , such as

stylish

iphone4 cases , cute iphone cases and so on.

OK, let us not to interpret this information. Jobs often rejected plan, will pick up again, and we cannot expect the new CEO has the same with his tastes exactly. In post-Steve jobs era, everyone is catching signals of change, and it is full of speculation. So attention to detail is because Apple is winning with details of the company, when the Conference is no longer a "One More Thing", when the colorful Apple Logo appears on the screen, when the iPad's name began to change, will inevitably cause various interpretations.

The lack of bright spots. The iPad3 is more conservative. Or to upgrade existing equipment, which has long been expected. But many people disappointed about, such as the 800w,SIRI function of the camera is far from 4S are not mentioned.

White halo fading Apple can continue past glory?

Letâs wait for the next generation of the new iPhone.

Then Micheal Margolis in Twitter said, he is not designers, but an implementation interface design of engineer, also, he also does not think this is a large fail "new of Apple TV interface is not ' post-Steve jobs era ' Apple destroyed of signal, it is logic next step, because they want to implementation unified iOS of home page ", he said new interface design of purpose is fired people on third party application of consumption desire. Other than parts the home page has not changed, what he believes that this proves that the old interface is excellent.

Apple depends to a large extent the success of revolutionary products and design excellence, innovation and attention to detail is the life of it, let us hope that this little thing is just a small episode in the company of numerous design decisions.

The most anticipated Apple iPhone in 2012

The speculation about the configuration of iPhone5, first of all is that they heard that there are 8 million pixels. As early as the iPhone 4 has not been published, and had heard indicate the iPhone 5 will use provided by Sony's 8 million pixel camera module components. iPhone came out four years pixels camera, 8 million are also expected on the 2011.

Followed by CPU clock speed of the CPU is currently 1GHz is standard for high-end smartphones, but with the Motorola Atrix 4G after the first dual-core CPU on mobile dual-core disposal will become the standard configuration of high-end smartphones. Thus the rumored iPhone 5 will use 1.5GHz A5 on disposal is also able to understand, faster higher stronger, after all, not just in the sports category, for the mobile world, is also the last word.

Of course, the final is screen, listening to vendors the latest development of a saturation of Shenzhen appeared capable of transcending 90% wide angle OLED screen, compared with iPhone 4 screen saturation as long as 70%, was probably used for the next-generation iPhone, size is a 4-inch screen, did not know of the screen and hear SPhone new flagship of Samsung Super AMOLED 2 If you want to use a ratio is high or low.

Pursuant to MacRumors Apple news site supporting Italy designers

Ciccarese that has leaked iPhone 5 casing design, he manufactured iPhone 5 an imaginary figure. Ciccarese supposed iPhone 5 combines features of the iPod Touch, and iPad, has very thin fuselage, occupying the entire appearance of the screen, Home of the diamond key analogy bizarre, overall very nice. Ciccarese meditate on some of the Central is very reasonable, judging from the usual norms, iPhone screen looks a little small; Apple products are very thin, drops of water-type fuselage to allow space for at the top of mobile phone camera. Only a little mark was a diamond in the center of Home keys. What is more, many manufacturers have launched iPhone 4 cases, such as cute iPhone cases, bling iPhone 4 cases and so on.

iPhone 5 what magical function? Site PatentlyApple reports, Apple announced that it has developed an advanced camera to watch 3D images, photos, videos, and iPhone 5 iOS devices such as who might use in the future.

We earlier reported about the accusations that Apple may be following improper labour practices to launch their product on time. As a response to this report, Apple have updated their supplier responsibility page stating that they are much concerned about the situation and the company is doing anything and everything that's possible.

On the other hand preparations for Apple's next gen iPhone is gearing up. According to latest reports from emirates 24/7, iPhone 5 is just around the corner and the company is putting 2 and 2 together to make 5, instead of 4.

iPhone design Evolution

Poland Design Studio Midsailors incremental update approach designed iPhone 5, the metal back and added a similar iPad profile, similar to the front and side insists on the iPhone 4.

From the iPad 2 to insight the iPhone 5, is about the concepts iPaddy machines designed in the first place. Complete in accordance with this concept a lot of rumors and design, back full metal design, like a plate of big brother.

the most authentic design

Several designers from the school of design, under iPhone 4S or rumor made iPhone 5 designs. However, these effects match closer the people think of iPhone 5. If the Conference in September, Steve jobs

took a similar iPhone5, members are not singular. According to the rumors, iPhone5 will have the appearance of similar iPhone4, is likely to further reduce the screen border.

Can Apple iPhone5 come

iPad3 has for some time--even though Apple has been called TheNewiPad, but there seems to be more used the name iPad3.

The freshness of the new iPad has passed, then the next is a cell phone. iPhone4S last year prior to the release, in the new generation (2011) iPhone News, we can see the name of iPhone5.

However, the eventual of iPhone4S, iPhone5 became a joke. So the next generation product, Apple will use the current network hits a high of iPhone5 this name?

We review iPhone development course. According to Apple's official name, the first generation iPhone called iPhone directly, straight; the second generation iPhone called the iPhone3G, which increased 3G network support; the name is of third generation iPhone3GS, S shows speed upgrade; as the fourth generation of the iPhone4, brought one of the most complete appearance changes; iPhone4S is significantly changed its internal structure, on the basis of the 4.

Even though we all know Apple's fifth-generation iPhone4S Smartphone, but if you follow the numerical order (rather than years), now many people when it comes to Apple's new mobile phone, the "iPhone5" still can not help but blurt out the word. If it is calculated according to the age, then it should be called the iPhone6, represents the sixth generation of iPhone.

Of course, iPhone4G, this name also appeared on the network, since according to Apple product development, new iPhone support 4G network are already in favor â to mention there is iPhoneLTE. Also different from the earlier this month and make

the world tumbled glasses NewiPad, the next generation iPhone or you can call NewiPhone.

When not carefully, iPhone smartphones easily be dropped onto the ground, cause screen corruption. Therefore, many users wanted the iPhone5 to configure a more powerful glass screen, in case that does not require additional protection can also be broken scratch-proof. What is more, many iPhone fans have to buy all kinds of best iPhone4 cases, now many iPhone fans have bought cute cases for iPhone.

Summary, iPhone4 is only a year with the publication order line of products, so you think will this year (this should not bounce, right?) Published the sixth-generation Apple Smartphone, iPhone6 how big is this concept of name? We iPhone5,iPhone4G,iPhoneLTE referred to above, which one of you will become a reality?

According to foreign media reports, the latest cracked patent applications show, Apple iPhone Smartphone has been considered in the back of the joining of two or more cameras, allows the iPhone to support 3D like the HTC Evo 3D naked photo shoot.

Apple iPhone5 will be paired with 3D camera

Apple Insider site pointed out that the United States Patent and Trademark Office has found a patent application from Apple "Systems and Methods for an Imaging System Using Multiple Image Sensors" (using more than one image sensor system and method for image systems). According to the description, this dual-camera application system through the appropriate hardware to capture, processing, and rendering 3D images.

Earlier rumors, iPhone 5 with 8 million pixels camera, and now there are rumors that iPhone 5 will support 3D camera. If these rumors are true, iPhone 5 will have the best camera in the world of smartphones beyond 3D with 5 million pixel camera phone HTC EVO Droid Bionic and Galaxy S2-d and 8 million pixels.

In addition, there are rumors pointed out that iPhone 5 will have a dual-core processor and a high-end monitor (retina display).

Amazon Kindle Fire will keep on challenging Apple iPad

Beijing time on April 4, according to foreign media reports, Amazon announced Tuesday that it will begin to ship to customers around the world next month Kindle electronic reader Touch 3G. Amazon said, on April 27 shipped in more than 175 countries and regions in the world.

Kindle Touch 3G was launched in last fall in the United States market. This list of countries and regions including the United Kingdom, and Germany, and France, and Italy and Spain, which users can subscribe to the device now. In addition to the English version, Kindle Touch 3G version also introduced other now in seven languages, including German, French, Italy language, Spain language, Portugal language (Brazil).

Kindle Touch 3G uses a 6-inch touch screen, equipped with free wireless 3G, up to 3,000 of the eBook. According to Amazon, the device weighs 7.8 ounces, a charge can stand for two months (in close reading under 30 minutes a day, wireless). More than 10,000 users in the Kindle Store can read books, newspapers and magazines.

Deputy Chief Executive of Amazon Kindle Dave Limp said in a statement: "we see on our new Kindle reader very much, we are very happy to be in the global sales Kindle Touch 3G."But Amazon has still not been disclosed Kindle Fire tablets, when global sales

We now talk about Apple iPad3

After Steve jobs left Apple CEO, jobs personally recommended by his successor Tim Cook took office, he rolled out his iPhone 4S and ipad3 feels more criticized as there is not much change, just as everyone is saying when Cook was beat by Apple, ipad3 user satisfaction is to burnish the Cook. Recent United States investigating agencies ChangeWave's data shows that ipad3 customer satisfaction 98%, beyond the iPad 2 97%. What is more, iPhone is also coming, which is a good new for iPhone fans. For they have bought many

best

iphone4 cases , for example,

cute

iphone4 cases.

As can be seen from the data, surveyed the ipad3 82% users are

very satisfied with it, 16% is satisfied, only 2% are less satisfied with it, it is surprising, actually not a user on the machine that are not satisfactory.

In addition we can also see from the list, most attract users of iPad3 is a 9.7-inch screen, the percentage accounted for 75%, of course, most users are not satisfied with it, faster 4G LTE network will lead to more traffic consumption.

It is important to note, than for the iPad 2, iPad3 heat is really obvious, however 89% users surveyed said that this is indeed a problem, but overall is acceptable. According to 9to5Mac site reports that Apple intends to reduce the price of iPhone4S iPad3 and, to enhance the competitiveness of these two products. If this message comes true, it will be listed on the Apple iPhone in six years, for the first time in the absence of replacement case price.

9to5Mac reports references from sources inside Apple, Apple held a high-level meeting yesterday, Apple CEO Tim Cook proposed a price reduction envisaged in the meeting, which was adopted.

Apple's price action is expected by April 30 in global synchronization, price of approximately US \$ 50-60, iPad3 shortly just listed, the price may be in the form for the promotion of cooperation with dealers. But allegedly iPad3 cut is likely greater than iPhone4S.

Amazon's \$ 199 tablet is very popular, exceeded 6 million in sales after its launched six weeks, their growth rates and even at one point more than the first generation of iPad levels, as well as in the Android camp can only slightly and the rival Apple iPad tablet device.

With the release of the new iPad, Amazon's fans are looking forward to this year, Amazon is going to have a new action. Recently, the Taiwan economy news disclosed that Amazon will launch three tablets products this year.

And rumor is compatible before, one 8.9 inch 1920*1200 screen resolution will be adopted, another low end model is 1024*600 7-inch screen, there's a-side version is used in 1280*800 resolution.

As of now, although Apple CEO Tim Cook said Amazon flat product of incompetent, released in the first quarter but the latter has successfully obtained a 14% share of the Tablet market.

Google PC PK Apple PC in 2012

Results from the foreign media, subsidies Google will start online sales this year Android tablet computer, and wants to use the online store to reverse the situation of weak Android Tablet sales, iPad3 formation competition in the flat trend.

Sources said, some online store tablet computer using Google's own brand. But Google does not produce the Tablet hardware, production work from Google's partners, such as Samsung and ASUS. A source says, Google's Tablet sales may be manufactured by ASUS.

Google needs to launch its own Android tablet computer, which initially may be is not satisfied with Google's partner, but in the long run, Google needs to do.

1, tablets are more important than smartphones,

There is no doubt that Google has been firmly in control in the hands of the Smartphone market, but, looking to the future, the Tablet seems to be more important, rather than a smart phone. After all, for some consumers, the tablet can replace smartphones and laptops. Even more important is that tablets could be achieved great success in the area of enterprise users. Google current should therefore make full use of this opportunity, to launch its own tablet, not time to lose in doing the job. What is more, Apple has held the major share of smartphone market, Apple iPhone5 is coming, even many iPhone fans has bought many best iphone cases in iphone accessories
mall for waiting the iPhone5, for example,
unique
iphone cases.

2, Google does not production Android tablet, which will be the detriment of Android mobile phone business

Although carrying Android phone is still very popular, but if Google could not in tablet computers make a difference, Android phones will also be the fate of this change. In the Tablet market, consumers have used in the past to use related devices such as Apple or Microsoft, so they may give up using a smart phone based on the Android system. Apple iPad's success in large part due to

the iPhone, this is no secret.

Therefore, we can imagine, if you do not have their own tablet computer, Android phones may also face difficulties as a result.

3, income-generating

From a financial point of view, Google enters into Tablet PCs, which also will be of great benefit. Successful sales companies from each of the Tablet sold in Tablet make a lot of money. At the same time, Google has failed to get the revenue from selling Android tablet. As investors have started to recognize this point, Google launches own Android tablet to help outside of their profits, may have no choice.

4, to put pressure on Tim Cook

So far, Apple seems to not worry about tablet computers. iPad has become the most popular tablet computer, Apple do not need to fear other competitors, but if Google launched its own Android tablet, this will bring great pressure to Apple, Apple's Tim Cook, Chief Executive, could face test.

5, the pressure to get rid of Windows 8 Tablet

Currently, Microsoft is hoping with the release of Windows 8 to enter into the tablet computers, however, Microsoft is not to launch its own Tablet after all. If Google is able to take a step, might turn to Microsoft to launch Windows 8 tablets dreams of great pressure, also will be able to make Microsoft's hardware partners to enter the Tablet market and look forward to success more difficult. Windows 8 will either become a stumbling block to Google, or promoting the plight of Microsoft was in the final, it will depend on Google itself. Maybe on Google, beset by if you want to get rid of Windows 8, the best way is to quickly launch its own Android tablet.

Comprehensive Analysis of Android ecosystem

It is well known that mobile Internet area (intelligent phone and flat computer) of competition has entered into to ecological system of competition, in the competition, due to Google Android has a rapid growth in intelligent phone market, and eventually in market share has beyond Apple and industry thought it can compete with Apple. IDC latest of report displayed, to 2016, based on Google Android system of intelligent interconnected device (including intelligent phone, and Tablet PC and PC) market share will reach 31.1% over iOS-based (17.3%) and is based on Windows (25.1%) equipment market share and thus become the largest ecological system of intelligent equipment. But IDC said, although from the overall highest market share of Android system, but because of the large number of manufacturers into the market, enterprises are to continue profits very difficult. This leads to the author of this topic, what constitutes a successful ecosystem?

I believe in intelligent devices (actually referring to is mobile Internet) a successful eco-systems in the field, one of the factors leading to market share is only one, the key is to look at the eco-system coverage, revenue (or known as income-generating) capacity (of itself and to the eco-system partners) to measure multi angle.

Coverage area in the first place, if the Smartphone and Tablet represents the future development trend of mobile Internet, at least so far, Google Android tablet computers nearly have no gains. It may be said, Amazon's Kindle Fire did not sell very well? Entire based on Android system of flat computer of market share in last year of fourth quarter also has occupied 30% of market share, Yes, despite so, Apple also is sharply leading in market share, if revenues of factors that I said above, Apple has took flat computer market revenues of 80% above of revenues, so above of 30% share does not take to 20% of revenues, reflects Android this area of revenues ability, Here also not counting the number of partners with Android, if you mean to each partner, they share and how revenue share in the entire Tablet market?

Here I needs stressed of is, Amazon the has occupied half in this 30% of market share, due to Amazon has themselves of commercial mode and application store, so outside usually will Amazon of flat computer independent Google of Android (despite its used of is Android of custom version), so, then excluding Amazon of Kindle Fire, Google Android to each cooperation partners brings market share and revenues almost can ignored, This is why the industry believes that Android tablets have been lost and by

Microsoft Windows8 have the opportunity and the main reason for the Google brand tablet computers to be published.

To date, only a few manufacturers, including HP, Dell and Lenovo promises with Windows 8. However, with the passage of time, the real question is whether they will be focusing on the platform.

These manufacturers in Vista are not popular when they are leaving Windows. Now, thanks to Windows 8 will provide a significantly different user experience, user may not use the operating system.

Once again, the manufacturer may not play properly with Microsoft.

Now Windows is not well compatible with smartphone, compared with

Apple iPhone, it is not well, what is worse, Apple iPhone5 is

coming, many iPhone fans are looking forward to it, even they have

bought many

best

iphone4 cases, for example,

stylish

iphone4 cases.

Also in intelligent phone market, latest of statistics

displayed, Apple and Samsung (one of Google Android of cooperation partners) two companies include has intelligent phone market 90% of

profit, but in this 90% of profit in the, Apple and occupies has

near 60%, this means with other of many of Android partnership

partners in carved up intelligent phone industry does not to 10% of

profit (because also has black Berry and Microsoft,), also is

specific to each cooperation partners, By Android's share of

profits is it negligible? I believe, many Android handset

manufacturers is a loss leader. Samsung is the largest

beneficiaries of Android (at least in a spell on shipments with

Apple iPhone, on revenues and profits, however the difference is

too much), but is also a dwarf in the Android system in

General.

No one can surpass Apple for a time

Gartner pointed out the other day, 2012 global Tablet PC Terminal sales volume is projected to reach \$ 118.9 million, compared to sales of 60 million 2011, which increased 98%.

iOS of Apple in the Tablet PC operating system market has an dominance,

2012 is expected to be 61.4% of global Terminal sales volume of tablets. Despite Microsoft's system of tablet devices enters to market, During the Gartner forecast period, Apple will continue to maintain a leading position.

Gartner Research Vice President CarolinaMilanesi said: "although personal computer manufacturers and handset makers racing to introduce their products and have their place in the Tablet market, however, except for Apple's iPad, we only found a few examples of success. As manufacturers strive to gain a competitive edge in price, and strive to achieve a difference in hardware or ecosystems, has accumulated inventory, only 60 million global tablet computers sold to consumers. Despite the launch of the new iPad has changed the competitive landscape, but the situation is still not improved in early 2012. "

Milanesi went on to say: "this year, Apple's competitors are waiting for what Apple will launch the new machine, both in the United States the Consumer Electronics Show (CES) or Mobile World Congress (MWC), only a few manufacturers announce new tablet computer. Many manufacturers in Windows8 when be available, will try to double the platform access market, hope that Microsoft's brand aura to increase their share in the enterprise and consumer markets. "

Microsoft Tablet this year is expected to reach 4.1% in total global Tablet sales, is expected to rise to 11.8% by the end of 2016. Windows8

will be launched
by Microsoft into the Tablet market with the operating system.

Milanesi said: "IT will Windows8 as a good opportunity for enterprises deploying Tablet, because of their familiar operating system for the enterprise, and equipment are also provided by many businesses already familiar with suppliers. This means Windows8 for consumers not only have a strong attraction, IT vendor support for the enterprise provides powerful environment. "

Foxconn's HR executives recently revealed that Foxconn has received the order of the sixth generation of Apple iPhone 5, is expected to release in October of this year.

Microsoft Greater China CEO Liang Nianjian said want Windows Phone mobile phone initially to the Chinese market in terms of sales than iPhone, more than Android phone from a long-term perspective, become the market leader.

Apple and Google are now regarded as smart-phone business growth in China the next source. Expected in 2012 China will become the world's largest smart phone market.

Gartner analysts said, by 2015, the tablet computer market sales volume

is

about 35% of total sales of Tablet. But this does not make it clear that procurement for the enterprise. More and more consumers are using individual Tablet PCs in the workplace, Gartner expects companies will allow tablet computers become part of the programme of employees to purchase their own equipment.

Milanesi said: "this move will hit some lock Enterprise Tablet market vendors, so that consumers are interested in reducing the products. This situation is just like RIM will have to face competition in the Smartphone market. But the difference is, flat start to lock customer base
, which

is general consumers, rather than business users, and consumers rely on apps and services such as the formation of ecological systems to manage the work. If the Tablet is responsible for deployment by enterprise IT departments, we believe Windows8 will enjoy advantages in the future such as the operating system, but only if you want to plate needed to use those products are able to combine the ease of use. "

2012 Android Tablet sales are expected to reach 31.9% in

total Tablet sales Gartner analysts, Android Tablet's main problem is the lack of applications that can be applied to the plate and give full play to their abilities. Gartner survey shows that consumers install a number of different apps on their phones and tablets.

When will Apple iPhone5 come

Switzerland Credit Analyst Kulbinder Garcha put Apple stock rating to "outperform," target price from \$ 700 up to \$ 750.

Kulbinder Garcha estimates that he expected before Apple's Smartphone market share increases, and think iPhone will gain market share, and Apple all the different devices in the market would do better than rivals.

Kulbinder Garcha thought that Apple's Smartphone share in the world this year will reach 23.2%, 18.9% last year, next year is expected to reach 23.3%. In other words, the 2011 Apple iPhone sales amounted to 89.3 million, will reach 159.7 million units this year, next year will reach 205.9 million units.

In 2012, Kulbinder Garcha thinks global Smartphone shipments will increase 9%, 2013 growth will increase 885 million and amount to 688 million respectively. From now until the end of 2013, smartphones in the world is estimated to grow by 37%; from now to 2015, shipments are expected to grow 26%.

Last year, the global Smartphone shipments 471.7 million units by 2015 will reach 1.176 billion. In other words, by 2015, the Smartphone market will reach us \$ 272.28 billion, for \$ 156 billion last year.

By the end of 2011, it is estimated at 762 million smartphone users worldwide, effective Smartphone penetration rate will reach 33% and by 2015 will reach about 100%.

Reported: "at least so far, we believed that Apple will go ahead sharply, because it has a vertical structure, which can seamlessly enter into the three markets. In addition, most innovation comes from software. There is a wide range of ' I ', it not only iTunes, but the program stores, iCloud and iAD service, iBook, Apple to seamlessly deliver content between multiple devices. Taking into account the environment of the entire PC market shipments,

comprehensive Apple owns the 17% market share, we believe that it is in smart phones and Tablet market relatively fast growth, long term up to 27% shares. â

Apple is a large part of the growth will come from emerging markets, not just China. Gaca expects fiscal year until the end of September, Apple is estimated to be \$ 170 billion in annual revenue, earnings per share amounted to \$ 46.43. Now Apple iPhone5 is coming, Apple fans are looking forward to it ,even some fans have bought some best iphone accessories in iphone accessories mall, for example, cute iphone cases .

France famous designer Philippe Starck, Apple will be released a "revolutionary" new product in 8 months.

Stark accepted France radio and the Figaro newspaper (Le Figaro) said in an interview that he is working with Apple to design a new product, its results will be issued before the end.

According to the blog site Hardmac news, stark hanging full media appetites, but did not disclose specific details that Apple "on the privacy issue as religious piety". But he revealed that in late Apple co-founder Steve Jobs when he is still living, he worked for seven years in California and every month jobs touch a surface, and until now, he still would have gone to the States to visit his widow aurene Powell.

Industry speculation, the so-called "revolutionary" product is most likely concerns of the much-rumored Apple TV, some analysts say Apple will release the TV product of the year. But speculation under Hardmac, such products may be to provide support for Apple TV remote control, due to the stark and contribution in its design to the team in this area.

In General, Apple's changes to the iPhone is a development, rather than revolutionary. However, the iPhone is increasingly facing competition from Android phones and Samsung Smartphone, Apple has the potential to be major reforms in terms of ergonomics on the next generation iPhone.

Stark is famous for designing a wide range of products, such as chairs, toothbrushes, restaurants as well as electric cars and so on, his simple but elegant design style, is in line with Apple's requirements. Stark also had design speaker, headphones or an external hard drive, so design it can be brought to the field of science and technology.

Window8 and Super Notebook join together against iPhone

In the context of mobile Internet, Apple, with its exclusive style and its standout products like iPhone smartphones, tablets, iPad flourished behind Microsoft and Intel in the global IT market, overwrites the cell phone and PC industry. Facing competition from Apple, Intel and Microsoft have come together.

"Ivy Bridge of 22 nm processors for future Intel and Windows8 by Microsoft (known as Win 8) tie in with the ultra, will further break the line between PC and tablet, leads the new change in mobile personal computers." Intel's global Vice President, PC client Division General Manager Kirk Skaugen said in the information technology Summit at Intel (IDF 2012).

Pressure from Apple

Recently, Intel China President Sean Maloney in the IDF said when interviewed by reporters on 2012, this year in the area of the Tablet, the important news is that Microsoft will announce Win8.

Sean Maloney said there are at least 10 OEM manufacturers are designing based on Intel and Win 8 Tablet PC operating system. Since the Apple launched Tablet iPad, are greatly sought after in the global market. According to market research firm Gartner publish statistical reports, global Tablet sales are expected to reach 118.9 million units this year, compared to last year's 60 million and increased 98%.

Gartner estimates that Apple iPad global Tablet sales will reach 73 million units this year, 61% of the market share, ranked first, and Google Android Tablet PC system sold 38 million, the market share for 32%, ranking second; Windows Tablet sales are 4.8 million units, the market share is only 4%.

You can clearly see is that in recent years that Apple launched iPhone smartphones and iPad product, such as in the field of science and technology in the world to shine, and famous. Beijing time on April 11, which hit \$ 644 in share prices in early trading

accounted for a market value of \$ 600 billion mark for the first time.

In the feast of Apple iPhone and iPad, because of its chips, and none of the current operating system with Intel and Microsoft products, so that nothing in the two giants in the Apple Carnival. According to the foreign media reports, Apple iPhone5 will be launched in October. Now even many Apple iPhone fans have bought many

best
iphone4 cases, for example,
cool
iphone4 cases .

In the field of traditional PC, Intel and Microsoft, respectively, with its dominance in computer chips, operating systems for many years dominated the development of traditional PC industry, form known to the Wintel Alliance. However the two sides because of rapid development of Apple in the mobile Internet in a passive situation, for the benefit of their respective, now the two sides together again.

Judging from the current situation, Microsoft launched the "weapon" is a Win with touch 8, while Intel will launch a 22 nm, 3-D three-gate transistors, developed as "Ivy Bridge" of the third generation smart Intel Core Duo processors.

Betting on Super

For Intel, fighting another major product of Apple is super. Sean Maloney on the IDF 2012 pointed out that 2012 will be Intel's true definition of "Super pole year".

Just a month ago, Intel Corporate Vice President and President for China specific Reporter Ian Yang, introducing the Super mind, said Intel's goal is to have all features on a single device experience, including business and household demand, combined with more familiar operating system.

"Now there are 18 kinds of super pc to appear in Super markets, available to consumers. In the near future, more than 75 different designs of ultra-this will appear in the market. "Shi Haode revealed in IDF 2012 lecture on April 11.

Shi Haode said the plans listed in the 2012 Super pole more than 75, they have different screen sizes (14 and 15 inch), shapes, and styles. In the second stage, the super-this device will use the upcoming third-generation intelligent Intel \hat{c} core processor series, first based on the processor system will be launched in the spring, more products will be listed throughout the year.

In addition, Intel will start from April, will launch a massive advertising campaign in the media. At the same time in the Chinese market, Intel Corporation and Suning Appliance worked in this year's "May Day" front, Intel will be in key cities throughout the country opened a total of 30 in a super shop of Suning stores and Suning flagship store opening 150 Super polar experience area. According to Lenovo, Hewlett Packard, Acer, ASUS, Samsung, mainstream PC manufacturers such as Toshiba, Haier has joined the Intel ultra plan.

Microsoft VS Apple is a long war

This is the fantasy world that Microsoft Windows8 wants to build, it can run any application, including touch screen, like of the angry birds, also includes tools such as 3D games and video editing of large software. Sounds simple, but this integration of Microsoft, Google and Apple are not selected.

A long struggle

Windows8 will not listed immediately, as a result of radical reform, enterprise are unlikely to have a rapid deployment in the short term.

However, Microsoft has already prepared. Microsoft is brewing a long battle, in order to win in the core market, Microsoft spent billions of dollars in a few years time.

This is Xbox long-term losses, and Microsoft are happy to do this, this is the reason why each of Microsoft's Bing search has invested heavily. Microsoft's head of consumer marketing Craig Belinson said: "we are a very patient business.

â

Patience is necessary, but implementation is critical. Microsoft mobile device had failed to be involved, such as WindowsCE. But there were signed that Microsoft has learnt its lesson from the failed lessons, the consumer Preview Edition of Windows8 has won the market praise.

Microsoft's plan is: regardless of the TV, computer, Tablet PC, phone or any other device, users can use the same platform to complete the same task. Operation will be different, but the core

experience is unchanged. Now Apple iPhone5 will be launched on july, many iPhone fans have bought all kinds of best iphone cases to wait for iPhone5, for example, cute iphone cases.

Microsoft's head of consumer marketing Craig Beilinson says: "users in the 'three screen' on the cloud service and see the same look and feel and experience, the difference will become more and more blurred." The fact is that Apple and Google also has such a strategy, but completely different.

Microsoft Windows8 is the key. Windows8 will be released this fall, new operating systems support touch, using the Metro UI. Metro WindowsPhone7 design inspired by the end of 2010, was introduced to the Xbox.

Metro interface makes Windows8 for a range of new devices, including Tablet PCs, and can be folded into a larger touch screen Tablet compound on a laptop computer.

At the same time, Microsoft also baking cloud services, such as WindowsLive, SkyDrive, and Bing, their integration in all consumer products. Log in to any device, users can access all content, applications, parameter settings, and your search history.

In contrast, Apple and Google device ecosystem is fragmented.

Google/Apple pattern

Apple is currently in "post-PC" era, the solution is to put devices such as the iPad and iPhone in the forefront, and PC as a fully independent of devices and platforms. Despite the integration between Mac and iOS devices, but Apple is always in the eyes of separation: mobile devices are for content consumption, Mac is to creation. For example, it is difficult to develop iPad on the iPad application, to run the Xcode Developer software, Mac is required.

Google's model is focused on Web, it is treated as a single platform in the future. This is a "device-independent theory" needs is users online in real time. Once users lose network connectivity, the computing platform will lose a connection with Google.

Currently, Apple and Google are suppressed in the core market of the Microsoft. Microsoft saw Apple media and tablet computer markets beyond their own, and Google is in the area of search and cloud service against Microsoft. In the smart phone market, the two companies are behind Microsoft. This put Microsoft in a very uncomfortable position, the laggard and loser.

JamesWhittaker was originally a Microsoft employee, and later switched to Google, ultimately returning to Microsoft. Whitaker in a recent blog post explained why their returns from Google and Microsoft: "facing a crisis, Microsoft is for radical reform. Obviously, Microsoft Windows and Office in his bones to be a code rewrite. â

As for Google, Whitaker said: "most corporations do not want to undermine the status quo, when a company relies on existing business revenue, naturally slow, or no action.â

Microsoft clearly understood that they cannot bear the consequences of slow. In the next five years, PC will no longer be the PC today. Although the desk may also display on the monitor, keyboard, and mouse, but these just accessories.

Apple iPad is still the big boss in the global PC

Market research firm Canalys reported, if counting sales of iPad tablet computer, Apple in 2012 is expected to surpass Hewlett-Packard, PC shipments will be the world's first. Including iPad and Mac computers, Apple's market share has reached the second. In the fourth quarter, Apple's market share is expected to rise from 9% to 15%. Although the iPad in the United States market will suffer impact of the Nook and Kindle Fire tablet, iPad sales in the fourth quarter will still be very alarming.

In the fourth quarter of this year, Apple and Hewlett Packard global PC sales on the throne. But if Apple wants to achieve transcendence of HP, may have to wait until iPad 3 was released. Computing iPad, Apple 2012 Super HP will be the global PC boss. Most Android devices, whether ordinary Android smart phones or the most popular Android tablet, which are running Android2.3 System (Gingerbread), this version of the function is actually satisfactory, in part due to interface roughness, for many device manufacturers to add their own user interface layers. So when Amazon's Kindle Fire and its competitor Barnes&Noble to launch Tablet PC, although running Gingerbread system, but completely different from the interface and the user experience. In

addition, Samsung Android cell phone with the HTC phone's interface looks different, they compared to LG, Motorola or Sony cell phones varies, that is, those systems are at the bottom of the phone is the Gingerbread. Samsung-supplied is the TouchWiz user interface, HTC Sense interface, is Motorola's MotoBlur under the cohabitation.

Although Amazon changed the Gingerbread appearance in Kindle Fire Tablet, market observers openly question, Amazon is willing to back an update to the Android system, or is the future of Amazon Kindle tablet will run their own completely different operating systems.

In addition, every wireless carriers want to have their own customized services, so even if it's the same branding and appearance of different Android phones running a system, which depends on AT&T which is Verizon, or Sprint contract mobile phone. Now Apple iPhone5 is coming, a lot of iPhone fans have bought best cheap iphone cases, for example, leather iphone cases .

Long live is the difference? No, not at least in the competitive world of mobile equipment is different. This characteristic led equipment manufacturers in the Android system is supported at a variety of versions of actual production, product categories are more complex in the future if these devices are upgraded to the latest version of the system, is certainly a painful thing, but also may not be able to realize. This problem is currently known as "fragmentation" in the industry.

In contrast, when Apple announced the launch of the latest version of iOS, and all of the iPhone, iPad and iPod Touch can be upgraded through iTunes the next day, which is very convenient. And when Google released the latest version of the Android system, each running a Smartphone or tablet of the system can complete the first time upgrading, depends entirely on the device manufacturers and wireless operators ' policies, it is difficult to reunification.

In addition, the equipment manufacturers upgrading will not strong now, because the devices that have been sold for upgrades, which cannot give them any financial benefits, but will cause costs to rise, when devices are supported and may also expose technical problems. Not only that, but once the user completes the system upgrade, they are more reluctant to replace old cellphone, the

manufacturer is totally worth it.

For these reasons, if you want to know when your Android device can be upgraded to the latest and greatest systems, come to the conclusion either need to wait a long time, or never. Loyal fans certainly disappointing, and this means that Google's efforts can only be 3% on the latest Android system users know.

However, the question does not to this end. Fragments of APP developers are scared. Let's take a look at the two developers of playful dialogue with each other on Twitter:

Natalia Luckyanova: 99.9% users via email complaining they cannot be upgraded. We currently only 707 different Android devices have been updated, everybody is going crazy.

David Smith: our Android developers conducted a survey, currently in 1443 different Android devices on the market. To complete your half, congratulations to you;-), please keep your head up and continue to work hard.

So, while the Android operating system continues to grow, but the platform actually reduced the number of APP developers, they think to join Apple's name on the no doubt wiser. And this is a major blow for the Android Tablet market, at present only a small number of APP to choose from, compared to a dazzling array of APP on the iPad.

So, while Android tablet on the market share this year has catch up with the trend of the iPad, but the reality is that only the Nook and Kindle Fire loss leader supporting Android tablet in the flag, they are half the price just for the iPad. According to the Gartner market research is expected, Android tablets, rapid growth will not be sustained, might be short-lived. Instead, Gartner predicted iPad will continue solid growth and continue to dominate the Tablet market at least until 2016. Although the number of APP on Android can't compete with Apple, but the root cause is the system has version range, product confusion as a result of the problems of fragmentation.

Smartphone market will enter qualifying session

On April 20, according to a Forbes report, analysis shows that Samsung will surpass Apple in Smartphone sales in the first quarter of the year.

Apple's sales will be launched in the first quarter earnings next Tuesday. Wall Street expects Apple to the quarter iPhone sales of \$ 32 million to 33 million. Although this is not a small number, but not enough for Apple to be champions.

ACI Research analyst of Edward Zabitsky said in an analysis report, Samsung about 40 million smartphones were sold in the first quarter, ahead of other competitors.

It is reported that fierce competition in the Smartphone market will continue. Samsung will be released on May 3, Galaxy S3, Zhabitski said that the new Exynos 44,124 processors produced that is using the Samsung, equipped with the same retinal image quality and low consumption of manufactured by Samsung Super AMOLED+ display.

Zhabitski also said that Samsung smartphones on a lower cost than Apple. He said that purchasing power of Samsung and Apple, Samsung Galaxy mobile phone spare parts design and production costs of about 60 to 80 dollars, Apple iPhone 4S in the design cost is US \$ 25, not including the cost of production. Samsung uses its own production processor, display, and memory will reflect the advantages in the future.

Apple recently released for the 2011 four-quarter report for the fiscal year ended September 24, 2011 showed that , Apple last quarter revenues of us \$ 28.27 billion, an increase of 39%; 6.623 billion dollars in net profit, an increase of nearly 54%. Apple sold 17.07 million iPhone sales in the quarter, an increase of 21%.

Now Apple iPhone5 is coming, even some iPhone fans have bought some iphone cases, such as cool
iphone cases, cute iphone cases and luxury
iphone cases, so how will Samsung deal with Apple iPhone5?

Apple as a mobile rising star of the year to start off in 2007, just 4 years to become the world's largest smartphone manufacturer, their success can be attributed to three things:

1. smooth sales channels. Cooperation in more than 200 countries and mobile operators in the world, not only to rapidly spread in the market, and has a very strong user stickiness.

2. boot policy success in consumer demand in the market. Apple always pursuit of fashion and innovation as a product, do not follow blindly but rather to guide the user's demand, iPhone series smart phone advanced design concept captures the hearts of millions of consumers, there is the biggest-selling smartphone brand.

3. the perfect combination of hardware and software. Apple doesn't like other mobile phone manufacturers trying to concentrate our efforts on the hardware upgrade, but based on the eco-system, software and hardware interaction, not only provides the best possible experience for the user, and significant cost savings, thus ensuring high margins of more than all other competitors.

According to third-quarter earnings released Samsung, Smartphone shipments grew by 44%, sales could reach \$ 27.8 billion, there were more than Apple and became the world's first smart phone manufacturers. Samsung has surpassed Apple to become the leading smartphone manufacturers in the NO.1 for the time being, but analysts believe that as the iPhone 4S sales in the fourth quarter, Apple will be returning to the champions of the Smartphone market.

Samsung's success is due mainly to its Android smart phones, especially the Galaxy S series of smartphones best selling in global markets, Galaxy SII went public in May of this year to have only won the 10 million sales. In addition, Samsung mobile low balance in high school, each class has a representative model, upgrading has been very fast, can be captured in a timely manner to the latest market requirements, which makes it in the highly competitive smartphone market leadership position.

Nokia fiscal 2011 third quarter results showed that total revenues to 8.98 billion euros in the third quarter, down 13%; net loss of 68 million euros (94 million dollars), and net profit to 529 million euros in the same period last year. Traditional mobile phone shipments to 89.8 million smartphones shipped 16.8 million. Nokia's loss this quarter, mainly because the smart phone shipments decline 39%, overall revenues declined 13%.

Nokia is currently a major transition, since the announced abandoning Symbian, MeeGo, after switching to Windows Phone, its market share, profitability and stocks all fell at free fall speed.

Impact of the Apple and Android smartphones, Symbian Smartphone market share continues to decline. Marriage bet with Microsoft Windows Phone, but delay in launch of their leading products.

Microsoft Win8 What You Don't Know

A few days ago, after Microsoft announced officially on sale Win8 all versions of names, versions and the features included. Later this year, Microsoft will offer ARM processors Win8 provides users with four different versions of the device for consumers, small businesses and large enterprises. So, for a large number of potential users, you also need to know what about Win8? For these four versions, individual users and business users the options do?

1. Win8 is the real needs of all consumers

According to the number of features provided by the Windows 8, consumers seem to be the Professional Edition of this software is not required. Windows 8 will be found some of the standard features, such as Windows Media Player, IE 10, shop Windows, and so on.

2. Win8 Professional Edition is essential for small business

Running a small business should not waste time to using entry Win8. Instead, these small businesses should buy Win8 professional. This version provides all the features provided by the operating system, but also adds some key features, such as BitLocker, Client, such as hyper-v, and the encrypting file system.

3. Win8 RT is missing key features

Win8 RT for ARM processor-based devices, a key is added to the Windows ecosystem product. However, some users do not like some RT features. For example, it does not have Windows Media Player. In addition, RT or not, Microsoft's storage space (Storage Space).

This function is a virtualization layer to provide storage management. However, the Windows version 8 RT's biggest problem is not allowed to install desktop software and x86/64 software. Other versions of Windows 8 are allowed to run the software. However, Apple iPad3 has published, what is more, Apple iPhone5 is coming, some

best

iphone cases also has sold, for example,

cool

iphone4 cases .

4. Windows 8 Enterprise Edition is suitable for large enterprise applications

Although Microsoft has not fully disclosed details of Windows 8 Enterprise Edition, however, it is likely to provide a consumer version of each function. As Microsoft notes, Windows 8 Enterprise Edition is a software assurance plan the only right choice for large enterprises. Windows 8 Enterprise Edition is basically a Windows 8 Professional Edition plus some additional functionality, such as PC management and deployment, and virtualization.

5. Consider upgrade policy

As expected, Microsoft is not forcing the user to buy all new versions of Windows 8. Instead, Microsoft says that the current Windows 7 Starter Edition, Home Basic Edition, and home productivity Edition users can upgrade to Windows 8, Windows 8 Professional Edition. Windows 7 Professional and Windows 7 Ultimate Edition users can upgrade to Windows 8 Professional Edition. Windows RT upgrade is not supported.

6. not all versions are supported for remote desktop

For techies and business users, support remote desktop in Windows 8 is arguably one of the most attractive features. However, the choice is not that each version has. In fact, according to Microsoft, the remote desktop is only available to Windows 8 Professional Edition and Enterprise Edition of Windows 8. Windows 8, Windows 8 RT version has no such option.

7. very simple

Remember when Microsoft introduced over the past several years in all versions of Windows Vista and Windows 7? User is very difficult to understand all these versions. However, the Windows version 8 has only two versions are provided for the consumer. Microsoft abandoned the practices of the past, which should help Microsoft improve revenues.

8. Windows 8 RT version is pre-installed in the device

Although users can purchase Windows 8, Windows 8 Professional Edition and according to their own will install on your own computer, but Windows 8 RT version does not have this option. Instead, according to Microsoft, this platform is pre-installed on Tablet PCs and other devices that use it.

9. Microsoft did not disclose the price or launch date

The last item, for consumers, is perhaps the most important content is, we still don't know the price of the various versions of Windows 8 and when they launch. Blog that Microsoft announced at a variety of versions of Windows 8, it plans to provide more

information. However, before that, users can try out Windows 8 consumer preview to see if it is not suitable for you.

The Tablet market seems like quite competitive everywhere

At present, the iPad is still the big winner in the Tablet market, Microsoft is hoping to take Windows8 impact existing market structure of the operating system. At this point, the dispute in the Tablet market has only just begun.

For nearly two years, intelligent terminal of the Tablet as an emerging product by consumers in hot pursuit, terminal manufacturers to the flock, so quickly entered the Tablet market to break out stage. But 2011 is different, users and the Tablet's honeymoon period is over, the market has gradually become saturated.

Market lean to one side

In 2010, Apple's first Tablet PC iPad appeared, pronounced the death of netbooks on the one hand, the other hand is knocking the door to post-PC era. When, iPad is almost becoming synonymous with Tablet PCs. In 2011, carrying Android tablet computer operating systems have sprung up in mass market, and Apple launch iPad 2 showed the opponent plays in the same period, the Tablet market take advantage of rapid prototyping, and takes on a spurt of growth. What is more, Apple is also a big winner in smartphone market, Apple iphone5 is coming, more and more manufacturers are effected by Apple, even more and more manufacturers have to launched some related Apple iphone accessories, such as
iphone
power packs, iphone cases and
iphone
chargers.

However, while the Android camp spared no effort on the Tablet input, but Android Tablet manufacturers market conditions are difficult to compare with iPad. According to market research firm

IHS iSuppli released the latest data showed that Apple become the world's largest flat-panel computer manufacturer in 2011, its market share is as high as 62%, Samsung, Amazon came in second and third position, market share and 9%, respectively.

Wang bin, industry analyst believes that tablet-based entertainment and portable Internet positioning, most rich applications to the Apple App Store and strong brands, plus the relatively excellent iPad that is using experience, its market share was taken. By contrast, Android tablets that are difficult to get rid of follower roles, such as the Motorola XOOM, HTC Flyer and other products on the market are also best game no one played. According to statistics, 2011 global Tablet sales were about 63 million units, including iPad covers have more than 73%. Worthy of note is that in March of this year the New iPad just listed apart from the outside has improved on a particular hardware configuration, and there is no breakthrough in innovation, which let consumers disappointed. At the same time, also to other operating systems such as Android tablet to break opportunities.

Entrants after protest

In the fast-changing mobile Internet era, Microsoft's response has always been "slow-shoot", but as a rule the area of PC operating system vendor, Microsoft's actions affect the sensitive nerve Terminal industry.

In February of this year's Mobile World Congress in Barcelona, Microsoft debut Windows 8 consumer preview profile, with specialized ARM version of the operating system, as well as new touch interface of Metro, mainly supports Tablet PCs and other mobile terminal products. This is seen as Microsoft's Tablet PC to challenge Apple and Google in the field, Microsoft as a latter, is trying to save in the mobile Internet market disadvantage moves.

Analysts noted that, relative to the iOS and Android, Windows 8 operating system entered into the Tablet market with three major benefits, first the operating system to PC through its cloud services integration, smart phones, and more intelligent devices such as tablets and, secondly, advantages are highlighted in the Microsoft Mobile Office, Windows Office application will become a major killer in the operating system. Finally, the traditional PC manufacturers now have to enter the Tablet market, and Microsoft has a powerful influence among them, which to the Tablet market penetration down groundwork for Microsoft.

However, as far as the current Tablet market, Android operating system have become highly sophisticated development, Android version 4 of its excellent compatibility is more consistent access to terminal manufacturers respected throughout the world. It is

understood that many manufacturers, including Samsung, Lenovo, ASUS Android Tablet 4 products are coming soon. Thus, any traditional PC manufacturers or the terminal manufacturers will not easily give up the Android system.

Even more important is, the Tablet as a carrier, primarily through a wide range of application software to reflect its value. According to statistics, Microsoft's app store Market Place only has more than 70,000 more than the number of applications, compared to Android and iOS a wealth of third-party applications, Market Place, it is much to make ends meet. It is not difficult to see that Microsoft's industrial ecological chain is not yet complete, apparent lack of supported third-party application developers. In addition, both relative to iOS, Android, or the early version of the Windows system, Windows 8 has a very large difference in operation, this is certainly a challenge to user habits. It can be predicted that under heavy resistance, Windows 8 tablet market short-term domestic story modified pattern.

Apple iPad is full of confidence

April 27 morning news, Apple CEO Tim Cook in the Investor Conference, said he did not believe that Microsoft with Windows 8 to support from notebook to Tablet to other hybrid device strategy will succeed, and compared to the one it has refrigerator oven features.

Citigroup analyst Richard Gardner asked about the Apple put iPad and MacBook Air into a single computing device eventually, making it both with portability of Tablet, also have a keyboard and a complete desktop operating system at the same time, he replied, it's not a good idea. He pointed out: "the PC in conjunction with the Tablet PC experience needs to do a lot of work, especially on the PC platform, its part of the reason is that Windows 8 operating system is also based on touch. Might as well tell me, why do you think PC, ultra and the Tablet market as a whole?"

â

Cook further noted that: "anything can be forced into one. But the problem is that these products will therefore be expedient; and when you start when these products are expedient, the end result is everyone would not be happy. "He say:" you can set the oven and refrigerator for one, but you know, it probably won't keep users happy. â

According to foreign media reports, Apple has announced yesterday that Worldwide Developers Conference (WWDC) will be held in San Francisco on June 11 in 2012. Today, Korea Web site revealed that Apple's next-generation Smartphone iPhone 5 will be released at that time.

iPhone 4S released last year to break Apple's tradition, it was released on October, iPhone 5 will be back. This is good news for iPhone fans, some of them even bought some iPhone accessories to wait iPhone 5, such as cool iPhone cases, metal iPhone cases and leather iPhone cases.

The Korea Web site also stressed in the report, iPhone 5 will use liquid metal shell, it will be thinner and lighter. Samsung Galaxy S3 is also the material used. This material do lighter while your phone, without weakening the phone fell, the ability to wear resistance.

In August 2010, the liquid metal to Apple's technology licensing, this metal is composed of nickel, picks, titanium and other metal alloys, very firm and hard to damage. Since then, the Apple rumor of iPhone 5 and MAC will use liquid metal abroad. WWDC 2012 will open next month, let us wait and see.

Cook suggested that Apple's competitors may only be as desperate holding joking attitude to plans to introduce the so-called "deformable notebook", that is, with touch-screen monitor with the traditional keyboard connected together, so as to enable it to play a notebook features. Microsoft and Intel have been talking about this idea.

Since early 2010's first since the iPad, Apple's intention has always been using iOS and OS x to create a unique product, and this can also be used as proof of Cook's remarks. Although Cook pointed out that, this two a platform can free to each other borrowed each other of function, like information, and reminded, and game Center and is publishing of OS x Mountain Lion system in the plans launched of notification Center function,, but from flat computer

and notebook of constitute elements view, this two species products in short-term within cannot-in for one, its causes is that their actual use has is large differences.

Cook also said: "we believe that the Tablet market has huge potential. "He said, judging from the extensive use of internal testing iPad, Apple listed earlier in this tablet computer has recognized this point before. "The iPad has been successful, not only in the consumer market, in education and in the corporate sector are; in some sense, it is now ubiquitous.â

Cook also said: "in the ecological system is getting better and better, and we are to redouble its efforts to make good product of the situation, I think that the Tablet market is potential.

â

He said, as Apple launched the iPad in the first two years ' time, the Tablet sales will have reached 67 million; compared with this, the company only sold the same amount spent 24 years iPod,3 years Mac,5 years to sell the same amount of time to sell the same amount of iPhone.

The success of Kindle Fire is a Google pain

According to foreign media reports, news from the technology news site TheVerge says, Google Android Tablet has great expectations of Android tablet that it is expected to take 33% of the tablet computer market share in 2011.

According to TheVerge disclosure of the Android quarterly review report, Google had expected in 2010, Android Tablet sales will reach 10 million units in 2011, 33% market share by 2012, Android Tablet PC sales of 10 million units, but its market share fell to 22%.

From the circumstances at that time, these could be reasonably expected. But history has proven that Google's Android tablet in the market expected to be too optimistic. Google's Android Project

Manager Andy Rubin in October last year by the United States sci-tech blog AsiaD Conference organised by AllThingsD said, when users have already used Android Tablet that has more than 6 million of the total. This data is far lower than Google had expected sales of 10 million a year.

Ultimately, Google does not have access to in the Tablet market share 33%. According to market research firm Gartner predicted that Google this year to complete their development plans in the Tablet market, but Google's market share of more than 22% may become a reality. Gartner is currently expected share 31.9% Android tablet to market this year, but this is KindleFire of the Amazon, Tablet calculations derived data. KindleFire carried a deep customization of Android operating system. What is more, Apple will gradually become even more dominant in the smart-phone market. Apple iPhone5 is coming, more and more manufacturers have launched iphone cases, such cute iphone cases, bling iphone cases and stylish iphone cases .

According to Internet traffic monitoring firm comScore released the latest report, Amazon Kindle Fire in February this year in the United States of Android Tablet market share reached 54.4%, occupies the first.

Samsung Galaxy Tab first in the second, the market share of only 15.4%. Other manufacturer's Android Tablet shares shall not exceed 10%, move Motorola Xoom ranked third for 7%, Sony Tablet s share is only 0.7%.

Compared to data of December 2011, Kindle Fire share almost doubled, while the share of other manufacturers ' products are shrinking. Researchers have not explained the product share of reasons, but the \$ 199 sale price should be the determinants of consumer preference for Kindle Fire. Amazon Tablet PCs are now directly can compete with Apple iPad price.

The results were quite embarrassed by Google, although Kindle Fire with Android has succeed, but it is not on Google's official Google interface and allow Google to earn Play store and other services. Rumors that Google will launch the Nexus that has the same price with the Kindle Fire Tablet.

Although Android fans always want to make Google's Tablet strategy succeed, industry analysts noted that to date, Google's Tablet strategy does not achieve the intended goals. At the same time, Apple with iPad firmly control the hegemony in the Tablet

market, numerous manufacturers does not help Google Android Tablet market occupying important shares of the market.

It is interesting, in Google's Android market share, not Google alone, according to market research group comScore points out that, in February of this year, Amazon Kindle received \$ 54.5% in Fire in Android Tablet market share.

Why Amazon Kindle Fire on the success of Google's Android platform and there is not much of a positive role in promoting, this is because Amazon is using Android as possible without cancellation function, but joining Amazon's services as much as possible, and prevent users from accessing Google Play shop. So, Google's service will not be able to truly play a role on the Kindle Fire, it is just a strategy fit. Instead, Amazon purchased applications, Web browsing, video viewing, music downloads, buy services such as e-books become a user preference, and to show their talents.

This means that Kindle Fire sale would raise the status of Google Android market is minimal. Purchase low price Kindle Fire not only for Google and Android partner is also a stinging, Google lost to both, such as Samsung, Motorola Android Tablet hardware for more sales opportunities, lost from access by users to use their own software and services to return.

More Google sad is that Kindle Fire in the Android market share continues to rise, from 29.4% goes up to cent two months ago. If the fast-growing Android market depends only on sales of Amazon's Kindle Fire, then eventually drag Google wanted to enlarge the market strategy.

Apple iOS6 is coming

Distance to next-gen iOS mobile operating system iOS6 release date, the time is getting closer, perhaps on the WWDC Conference in June this year. By this time, people cannot help but iOS6 imagination to figure out something for the future. In the past,

multi-tasking, copy-and-paste, folders, push notifications, we've been looking forward to, and now iOS5 has achieved these earlier feature.

About iOS6, what are you looking forward to it, here are 6 guess and recommendations on iOS6, if you have better ideas, post replies may wish to share with members.

1, expanded Siri capabilities, open SiriAPI

This should be the one of the most looked forward to improving for iOS users. When Siri debut with iPhone4S iOS5, easily become a place where people were most concerned about the topic, but a lot of iPhone4S users over a period of time but is no longer in use after the function, feel the current Siri is more like gimmicks.

For Apple, that's true, because Apple is now to launch the beta of Siri, which regardless of language support is certainly to be more development on the feature, so we expect iOS6, Siri will have better performance. The most simple function is API for Apple is opening to third party developers Siri, when after Siri can be integrated with third-party programs, we will find Siri really can do anything, you can tell Siri what you want Skype calls with friends, you can use Shazam to Siri search songs, and so on.

If Apple is to open to third party developers SiriAPI, then in future App, compatible with Siri would become a major attraction.

But the realistic point of view, Apple seems t will not be open to third-party developers of Siri API within a short time, but I think Apple could let Siri in the iOS6 turn on or turn off WiFi and Bluetooth, this should not be difficult, right?

2, many users (especially the iPad)

IPhone mobile phones are private, but the iPad in many cases, it is often shared with family, friends or colleagues. If in the iOS6, you can add multiple accounts for the iPad will certainly be helpful, such as the accident will not be their families see or delete private messages, game progress will not accidentally be adjusted, everyone can have their favorite custom settings, and so on. For iPhone4/4s users, they are looking for forward to the iPhone5, even they have brought some iPhone accessories in best case mall, for

example,

cute

iPhone cases.

But as a practical matter, many factors limit the possibilities of iPad users, such as sync photos and videos of space use, iCloud access issues, distribution and planning is not easy to achieve a

better degree, iOS users still have a long way to go.

3, more social network needs to be integrated

iOS5 depth integrates Twitter, but in our country, we can not to use, foreign friends are looking forward to integrated Facebook for iOS6, domestic users of the microblogging and social networks available in China everyone can do it. In OSX10.8MountainLion, Apple is thinking of Chinese users, we want iOS6 too.

4, auto-hide unused Newsstand magazines

In the added of Newsstand newspaper magazine for some user is a good message, but for another part, especially domestic user, this things was too annoying , usually with does not to, also put does not in folder, by deleting also by deleting does not off, U2B icons can be hidden, this useless of stuff on must pendulum in iOS main interface Shang, this things on like is a storage special type App of shelf, actual use feel is Apple subscription service of forced marketing means, But for users who do not use it is a white elephant, iOS6, if you do not subscribe to magazine auto-hide this thing all right?

5, iPhone multitasking gestures

iOS5, iPad has come with four and five finger gesture, automatic main interface, task switching, open the task tray operation, which make iPad users more comfortable. In fact, does not add the same functionality in the iPhone, Apple may also have their own considerations, after all, the iPhone's screen is too small.

Four and five fingers on the Apple iPad could be considered operation into a three-finger action on the iPhone, if users think it is easy to close, but at least give the user a choice of possibilities you want is not better.

6, improved notification Center

Before iOS5, users push notification, this issue has reached the level of invite SB. finally let us see Apple's big move, iOS5 notification Center for a full redesign, than many well before, but development is still very large.

First notification Center can add more gadgets, especially above the iPad. Many users feel without too much use of the notification Center on the iPad, no weather no stock, these can have. Or with small tools, such as a timer is also very useful.

Jailbreak software such as notifications SBSettings has opened up a very good Center, but remove the notice should also reform the method of change, not only from the right corner removed, as prompted by deleting text messages that slide to the right is also good.

WWDC 2012 Still Had Many Bright Spots

Although this WWDC did not show iPhone5 that we expected and not any news of the next-generation iPhone released! But this WWDC 2012 had many bright spots in the software and hardware that are like a WWDC2012 since 2007. Some highlights of the review mentioned in the keynote:

MacBook Proâinnovation

As in previous years, Apple has upgraded all of the configurations of MacBook Air and MacBook Pro. They are upgrading to the latest Intel processor 22 nanometer IVB (Ivy Bridge) chips, 15-inch MacBook Pro video card has upgraded to Nvidia GeForce 650m; upgrade camera for FaceTime HD over the screen, support 720P video capture; upgrade for 3 USB interface, providing 10 times times the transfer speed of 2.

These upgrades have nothing to say, which have become routine.

There are two points to worth, one is the MacBook Air 13 Basic Edition upgrade , which is configuring price reduction to \$ 1199 (\$ 7,643) â \$ 400 lower than the previous

generation, poured in 13-inch super-this is not good news. Second, Apple has cut off a 17-inch Apple MacBook Pro product line, for the new track.

This WWDC heavyweight hardware product is a new version of the MacBook Pro, is called "equipped with Retina (retinal) screens MacBook Pro" (MacBook Pro with Retina Display).By the way, though Apple iPhone5 is not coming, many iPhone fans has bought many

iPhone cases on
best case mall, for
example,
cool
iPhone cases .

It is not imaginative name, gives the feeling like that upgrade the high score screen MacBook Pro only. It also showed a play on "next-generation MacBook Pro" that is more appropriate. New version

of only 15.4-inch MacBook Pro this size, screen is still 16:10, but resolutions up to 2880 x 1800 of terror, the pixel density is 220 PPI. And a new screen with IPS technology, Visual angle and color saturation is strong low Pro and Air.

High score screen is one of the selling points. Since the launch in 2008 one fuselage, there is no qualitative change for the design Shape of the MacBook Pro, major was upgraded and improved detail. The launch of the "next generation of MacBook Pro" rather large changes, like MacBook Air, it left behind mechanical hard disk, switch to SSD solid state hard drive, not afraid of turbulence and the response time is faster than the standard MacBook Pro. In addition next-generation MacBook Pro throw away a lower usage rate of the CD and Ethernet.

The Retina display of MacBook Pro 15 has more light than the MacBook Pro 13-inch thin. Its interface is more abundant than the MacBook Air, provides dual-dual USB 3, Thunderbolt, SDXC card slot and HDMI interface. New introduction of dual microphone noise reduction also calls very useful, this is already smart phone standard. Who wants to combine the high scores for people with large screen and ultra thin and light form factor, Retina display MacBook Pro 15 is probably the most attractive product on the market. But it's really come at a price, with low priced \$ 2,199 (about 14,000), nearly 1 time expensive than MacBook Air 13-inch, and the same as the MacBook Pro 15.

According to the data provided by Apple, Mac sales in the personal computer market as a whole now bucked, installed capacity has now reached 66 million, a large part of the credit for this should be attributed to the MacBook Air. Retina display MacBook Pro is very attractive, it is like MacBook Pro should have.

Unfortunately high prices make it destined to qualify for most users. I look forward to coming across the MacBook to differentiate--particularly 11 and 13 inches of Air.

Notification system

The Notification system of OS x has been very simple, Growl of that third party application into a lot of long-term. Mountain lions join the notification Center and the iOS is very similar to the touchpad right along with your finger to move to call up, also available in a full screen application. The change of iCloud files is also reflected by the notification Center.

Messages

iMessage on the iOS platform has 140 million users for a total of 1.5 trillion messages â on average issued 1 billion a day, let operators make a lot less text messaging fees.

Now, Apple went even further into mountain lions iMessage added the Messages application, users can directly reply to others via the Mac to the iMessage message on my iPhone, is expected to further undermine the carrier's earnings.

Do you think that Apple iPhone still can not be exceed

"Almost a year to the high end mobile market was dominated by Apple iPhone4S, but the situation is fully changed. "Mobile industry consulting firm national policy advisory, principal analyst Peter Yang Kwan said to reporters. Recently, Apple's "rival" Samsung and Nokia publish flagship mobile phone GalaxyS3 and Lumia900, respectively the preemption by Apple owns the high-end handset market. The industry expected the gap of Android and Microsoft systems (WindowsPhone) and technology between Apple's iOS operating system has gradually disappeared, on the Apple in the Smartphone market in China, "a single" situation will be unsustainable.

Nokia and Samsung challenge to Apple together

It is learnt that the Apple Worldwide Developers Conference will be held on June 11 in the United States in California. The industry expects in this Conference, Apple is likely to release the operating system of the new generation of Apple iOS6, and the discovery of the next generation iPhone cell phone listing. However this eve, Samsung and Nokia also released a new generation of flagship models.

According to Samsung Electronics revealed that supports three new generation machines King GalaxyS3 of 3G system has been listed in China. A Samsung company told reporters that now more than 100 network operators in the world, has been close to the 7000 millions, will be the best-selling models. The official also told reporters, shortly after the GalaxyS3, Samsung also will be published the Note of second generation products after best selling large-screen Smartphone.

At the same time, Apple is another old rival Nokia that has also released IE9 browser built into mobile version, WindowsPhone system's flagship phones that support HTML5 technology Lumia900.

According to the General Manager of Nokia's major Teng Hongfei told reporters, Nokia 900 won 13 international award overseas, which is very competitive handset. However, there are still many iPhone fans are looking forward to the iPhone5, even they have bought many best

iPhone cases, such as stylish iPhone cases, bling iPhone cases,

cool

iPhone cases and so on.

A strong opponent, almost certainly iPhone5 prior to the release of the next generation, Apple iPhone4S will be shocked by Samsung and Nokia's new flagship mobile phone.

Apple cell phone frequency is questioned

Accompanied by the introduction of more and more high-end smart phones, whether it's domestic mobile phone users are also the three carriers, are beginning to gradually get rid of Apple iPhone mobile phone "dependent".

"Many users have iPhone4S is fatigue. "Peter Yang Kwan said, upgrading from iPhone4 to iPhone4S, appearance without any change has a lot of fans of both deeply disappointed. At the same time, Android Smartphone and Microsoft systems are flourishing.

In addition to long term unchanged appearance to attract users, Apple's iPhone on the performance indicators were also mobile phones more than the Android and Microsoft System. For example, quad-core Samsung GALAXYS3 is the first Smartphone, the Android operating system 4, HD dazzling 4.8 inch screen, 1.4G CPU. While the Nokia Lumia900 is carrying 4.3-inch AMOLED screen, configures the 1.4GHz processor.

Compare iPhone4S CPU frequency is 800MHz, only 3.5 inches on the screen. In big-screen mobile phones growing popularity now, iPhone4S is still using a 3.5-inch screen, is relatively small. In addition, criticized iPhone4S's battery life is also suffering from the user, still has not been fully resolved.

Industry analysis

Carrier force resistance of Apple "sat"

"Apple iPhone's importance in the eyes of operators is on the decline. "Art-Media Advisory Board Chairman Zhang Yi said, Apple has so far failed to reach a cooperation agreement with China Mobile, the world's largest operator, looking back at Samsung and other vendors have a positive ground-launched TD-SCDMA to 600 million mobile users cell phone. Zhang Yi said, Apple's arrogance make no doubt eager to obtain high quality terminal of China Mobile lost patience and no longer had high hopes, but switched to Samsung

and Nokia's arms.

According to market research company Nielsen report shows that by the end of March of this year, more than 30% of smartphone users worldwide are using the iPhone. However, the iPhone on the 3G share of the Smartphone market in China is only 8.52%.

Analysis of the industry, causing iPhone share not high due to the high price of Apple's iPhone, ordinary working class to buy more difficult. "iPhone4S lacks the price advantage." Peter Yang Kwan said iPhone4S is expensive now, but better Android and Microsoft system configuration of mobile phones are cheaper, more cost-effective than iPhone4S. "Operators in order to meet the needs of the common people, increase the development of thousands of intelligent machines, reducing concerns about iPhone is the inevitable trend. â

Do you think that Apple iPad will be surpassed

June 16 Beijing time this morning news, United States consulting firm IDG's latest report showed that while many people still see Apple as the Tablet industry Overlord, but purchased the Tablet for the first time in the business and IT professionals, but 44% has plans to buy Android in the next 12 months, only a 27% plan to buy iPad.

"The growth in use of the Tablet and the gaining popularity of the device will have a fundamental impact on the IT and business for years to come." IDG editors Katherine & Kraft (Kathryn Cave) said.

IDG has surveyed on 3,124 global business and IT professionals, 71% already has a flat panel computer, which 51% has owned iPad. But never wishes to buy, Android is leading to 44% share, Windows 8 is only for 3%, there are 21% have not yet been determined. African 44% of the respondents plan to buy Android tablet, 21% plans to buy iPad. Proportion of European is 49% and 23% respectively. North America only 30% of the respondents plan to buy

Android, Oceania is only 35%.

According to foreign media reports, technology media company IDG that, within the next 12 months, in the enterprise market Android Tablet sales will more than iPad. However, Apple iPad still is the big winner, for it has many fans, they are looking forward to the iPad3 and iPhone5, even they have bought many apple accessories, such as best iPad2 cases, stylish iPhone cases, leather iPhone cases and so on.

IDG companies surveyed 3,124 IT and business people in the world, showed some 71% of respondents said they have a tablet, 51% of them have iPad. However, buying tablets for the first time said they will buy Android Tablet within the next 12 months, they accounted for 44% of all respondents; in comparison, iPad only of all the 27%.

Market research firm IDG Connect editing Kathryn Cave explains in a note, employees bring their own equipment to work the trend for the popularity of Tablet PCs in the enterprise played a great role in promoting. "These data reflected the changes of Tablet computer market and the workplace. "Kraft said," they will have implications for the business, IT security, and global marketing officer in the emerging markets. â

However, many of these discoveries and differ significantly from the findings of the survey report on the iPad. In October last year, mobile data services provider Good Technology has released a research report, the report said that iPad iOS appeared on the main driving force of the enterprise market. At that time, the iOS Tablet PC is activation 96% of the total number of all enterprises, while Android tablets accounted for only about 4%.

IDG's forecast is true or false, will meet to be seen within a year. However, in any case, this change looks quite astonishing. Although Android dominating smart phone market, iOS still is an unquestioned leader. Of course, in the future this may change in five years, but predict big changes in a year's time, seem to be far too optimistic or radical.

However, the location maybe is a critical for Android market--particularly in developing countries, where cheap Android tablets could really become very popular. For example, IDG

companies found that in Africa, the Android is probably the first choice for many potential buyers, but in North America and Australia/New Zealand, one might prefer the iPad.

iPad is essentially just a consumer product. Moreover, since Apple is unlikely in the short term, it will not be setting prices at below \$ 499 of the new iPad, price of \$ 199 or less of Android tablets, it is possible to enter the markets of developing countries. If so, we will see on the global Tablet market Android tablet will more than iOS Tablet.

(no subject)

Five years ago, the executives were obsessed with their BlackBerry own hands, believed that this is the best Mobile Office solution. At that time, his greatest desire is to make a connection of the mobile phone, iPod media player and Internet into a smart mobile device, ultimately launched shocked iPhone the industry. iPhone attracted industry and industry change, and had a profound impact on the technology industry as a whole.

In the past five years, iPhone dramatically changed consumers and enterprise users to use a smart phone experience. iPhone also forced the entire mobile phone industry to rethink what needs to be used in high quality Smartphone. Here is iPhone mobile phone brings to users and the mobile industry's 10 largest contribution in the past five years.

A new touch-screen world

Before the advent of the iPhone, configuration of touch screen devices is very small. However, these touch screen response speed and the overall quality of the Apple iPhone is missing. Ever since the iPhone has appeared, touch screen continues to improve Enterprise idea has changed

After the iPhone launched, over a period of time, IT decision makers thought they never introduced to the Office of Apple products. However, since many of the features are applicable to enterprise, iPhone helps to change this situation. Now, the IT staff is introduced to the iPhone and Apple products such as Mac Office.

Pay an attention to design

Look at the device before the iPhone launch five years ago, which makes it easy for people who lose interest. Apple real with a market focus line designs, and in the process helped improve the look and feel of the mobile device.

Not just smart phones

Before the iPhone launch, many people think that the Smartphone is not suitable for their own. If these people don't often write e-mail or browse the Internet, smart phones have any meaning? However, ever since the iPhone has launched, Smartphone application have an rapid growth. What is more, iphone accessories also have a big growth, such as

cute

iphone cases, cool iphone cases, bling iphone cases, stylish

iphone cases and so on.

Every family has more than one device

Five years ago, mobile phones are a family of luxury. Usually everyone in the family use a cell phone. However, due to the design of the iPhone made it a more personalized products, now a family are using multiple smart phones. This greatly helped Apple and carriers.

Developers of cottage industries

As Apple launches app store in 2008, Apple created a scale up to millions of dollars of industry focused on developing applications to mobile devices. Now, developers from around the world in its own mobile application created an entirely new business, many developers are working from home.

Demise of the personal media devices

What's interesting, when Apple launched the iPhone, which also undermined its own business. Before the iPhone launched, Apple's iPod music player is the most popular mobile devices. However, as the iPhone integrates music features, iPod no longer necessary equipment, this personal media device there is dying.

Promoting the birth of Tablet

Good thing about the iPhone is that it has prompted many companies to own things away from touch-screen devices considered smartphones. For example, after enjoying great success of smart phones to Apple iPad ushered in the era of tablet computers. If there is no iPhone, tablets not more popular and popular.

Ideas of new applications of old communication

Communication technology of Apple iPhone, phone, video, and text is not a breakthrough technology. However, the iPhone changed the

way the use of these communication technologies. FaceTime is difficult to catch up it.

Entertainment consumption changes

Before the iPhone launched, there are many devices allow people to play games, listen to music or watch video phone, but the quality of these features are bad. Now, more and more people on the iPhone and other mobile devices to play games, watch videos and listen to music. This is a dramatic change that cannot be ignored in the market.

Whether you like Apple, iPhone really changed the mobile industry. In a short period of time the iPhone5 years, Apple has killed many strong opponents, successfully from the computer manufacturer into a mobile phone manufacturer. Apple has already become adopt. In August last year, when Apple's market capitalisation has gone beyond Mobil Oil as the world's largest company by market capitalisation, and in April this year, when analysts ventured three years after Apple's market capitalisation of \$ 1 trillion.

IPhone has become the most important Apple product, its revenues during the same period can exceed Microsoft's entire revenue.

Recently, Mashable website publishing Statista company and produced a pair of information charts, five years from the data displayed on this incredible journey.

5 years ago on June 29, 2007, Apple in the United States released the first generation iPhone. Since then, iPhone after upgrading five times, its success is unprecedented.

End of March 2012, Apple sold iPhone 218 million.

In just five years, the iPhone dramatically change Apple's revenue. As of last quarter, Apple iPhone revenue total revenue of 58%.

IPhone can bring in revenue for the same period exceeded the United States total income of some large companies. From the first quarter of 2012, iPhone as well as the related services and accessories revenue was US \$ 22.69 billion. Microsoft's total revenue was \$ 17.41 billion, coke is \$ 11.14 billion, Disney was \$ 9.63 billion.

From June 2007, the iPhone for Apple was brought 140 billion dollars in revenue. Taking into account the inflation factor, that's more than 12 years before Apple released iPhone's entire revenue.

IPhone has made Apple as the world's top company in market capitalisation. In June 2007, Apple's market capitalization is \$ 106 billion by June 2012, Apple's market cap of \$ 536 billion.

Game market competition will become more intense

United States Science and technology blog Verge magazine said that Apple iPhone5 and iPad will be able to form the great pressure on the game console manufacturers. 4 years ago, Apple launched the App Store app store, which permanently altered the mobile gaming market. After the success of Apple, other companies began to follow suit.

Apple iOS is no longer the only competitive platform in the market. Almost all mobile phone users, whether they use Android, iOS or BlackBerry system that has been playing games on a mobile phone. There is no doubt that mobile gaming is growing fast, every year is the emergence of new trends and changes in the market. The main change is that attitudes towards free games, social networking and gaming controllers.

IOS free game mode

Currently ranked in top 10 of games in iOS, 8 are free games.

When Apple launched App Store in 2008, developers do not know what kind of price can be accepted by the market. In the past few years, in order to attract users to download, make the game rankings, many game prices are slashed. 99 cent games are the mainstream market.

More popular than the cheap games are free games. Free game idea is very simple: the basic versions of the game are free, but during the game the player can spend money to upgrade or purchase virtual currency. The DragonVale and the Tiny Tower are two popular free games, and a profit. In the game, the player to speed up construction of its own virtual village or the building, tend to cost \$ 5 to \$ 10 rather than \$ 1. In face , iphone fans don't mind the price, even they have bought many kinds of best

iphone cases, such as cool iphone cases, stylish iphone cases, cute

iphone cases and so on.

In recent years, games have been free, high charging models are becoming more popular. In May this year, according to a study conducted by Information Solutions Group, players in the mobile game two-fifths expenditures were used to obtain additional content or virtual currency.

In addition to focusing on free mode developer, other developers started to do so. The fruit Ninja developers Halfbrick recently launched a game of the Jetpack Joyride. This is a completely free game, players can purchase virtual currency in the game. Although the fruit Ninja on most platforms is still costs \$ 1, Halfbrick is also introduced in the game virtual currency features.

For game developers, after the initial investment, they wanted faithfully during the game players can continue have small consumption.

Although this free game models look only in favour of the player, but in fact the gaming industry will benefit as a whole.

Free games provide the player with two choices: take a long time to get good grades, or pay to accelerate the process of game.

Halfbrick and other developers to find a good way so that players would not be boring, but some developers are still committed to the simple game addiction the vicious circle, lack of skills that allow the player to conduct a series of operations, and provide no sense of reward. This will only bring about the end of the game, were unable to gauge a players skills or fun.

However, as long as this easy to addictions but pointless game free mode will still be able to profit, based on the game of traditional skill will gradually lost markets in the developer and Publisher.

Social networks fragmented

In 2008, when the flow just at the start of the game, this game, many people are surprised. Players want that they can supply these games that are similar to mobile games for Xbox Live experience, help them to track friends, achievement, than all the highest scores. It is unfortunate, Apple published the Game until 2 years after Service Center, so far, Google has not launched a similar service in the Android device. During this period, companies like OpenFeint and Chillingo has filled the gap, launched their own mobile social gaming service.

In the iOS system, Game Center has greatly influenced the emergence of user demand for similar services. No one will want to maintain two similar logon informations, and your buddy list.

Recently, in the "3A" level game publishers, development of independent social gaming service trends are emerging. EA and game publishers such as Activision Blizzard Apple Game Center is no longer used, but the independent development of similar services. Although they no longer remember additional logon information,

doing so will bring convenience. Origin of the EA service allows users to Android, iOS, track progress between the PC and game console platforms and the buddy list, and Game Center applies only to iOS and Mac users. Activision Blizzard recently announced similar plans. Uniform flow similar to the Xbox Live service is gradually becoming a reality.

Windows Phone and games

Last month, Microsoft unveiled Windows Phone 8 System. To date, this game faces two big problems. One hand, the Windows Phone platform game released late, some games even later than the iOS platform for more than a year. The other hand, the Windows Phone platform game are priced higher, up to iOS and Android platforms 2 times to 3 times the same game.

In terms of market share, Windows Phone device is less than 10%.

This status in Windows Phone 8 later this year is expected to change after the release, but before Microsoft released a more powerful line of games, the player can only wait and see.

Controllers will dominate the host war

You can imagine the scene: Apple designs and sells traditional physical controllers similar to the Xbox 360 and PS3, and iOS devices can connect to your TV. In such circumstances, the only problem is that Apple needs more non-touch-screen gaming. If Apple launches a physical controller, then the market will see a large number of sells for \$ 1 to 2 of action-adventure games and first-person shooter game.

If casual game players found that they buy \$ 50 after the controller and plug in the iPhone or iPad, you can gain experiences similar to the game host, then they will have no need to spend \$ 300 to buy a game console. Apple may not be able to defeat Microsoft, Sony or Nintendo, but certainly Apple will change the market. When Apple promoting the game fell from \$ 60 to us \$ 1, market competition will become more intense.

The global Tablet market will become more intense

Beijing time on July 10, Monday, Microsoft announced that Windows 8 will be available in October at the worldwide Partner Conference.

Microsoft CFO and Chief Marketing Officer for Windows Tami Reller Monday said at the Microsoft Partner Conference, Microsoft will be planned for release in the first week of August the Win8 RTM version, listed in late October. This means that new Win8 PC will also be released in October.

Tami Reller said that Win8 will be listed on the 231 world markets and provide 109 languages. When the Win8 is listing in October, consumers can upgrade from an existing Windows PC to Win8.

There were reports that Microsoft will publish next-generation operating system in October, but Microsoft said Monday's statement was the first official confirmation the Win8 will be released in October, but the specific date is not clear. In addition to Win8, Microsoft will also release Windows RT system that is dedicated to Tablet PC in October. Autonomous independent Tablet PC Microsoft Surface will be available for sale during the month, compete with Apple's iPad during the Christmas shopping season. However, Apple iPhone 5 is coming, more and more iPhone fans are looking forward to it, even many fans have brought many iPhone accessories, such as cute

iPhone cases, cool iPhone cases, bling iPhone cases and stylish iPhone cases and so on.

Apple will release next-generation operating system this month Mountain Lion, the price of system in the Mac App Store is \$ 19.99, although exact release date is not disclosed.

For the global mobile market, June of 2012 is an unusual and slightly more "lively" month. First is that United States Microsoft published their own Tablet PC product Surface in Los Angeles on June 18, then, Google released June 27 new Tablet Nexus 7 and new versions of the Android mobile operating system, hardware and software products. Suddenly, Apple Tablet iPad will lost its place in the future, or will suffer rewrite saying there. CEO Tim Cook on Apple, how to deal with the "old enemy" Microsoft, Google for their impact in the Tablet market, will become new challenges.

Heavyweight competitors with a new price point

Before you publish a tablet, IT Giants have long punches: Apple released the iOS 6 operating system, and Microsoft launched

WindowsPhone8, then Google unveiled Android 4.1. Therefore, this successively launched the tablet in the industry, which seems Microsoft and Google were discussing good, ready to expand aggressively attacking Apple.

Microsoft's own brand Tablet Surface of this announcement was very unusual, was the first to own-brand to join the Tablet, a battlefield, a modified operating system software were provided by Microsoft in the past, provided by Intel chip, integrate the various hardware manufacturers make various brands of PC and notebook models, from this cross-sector from a software company to enter into hardware.

Microsoft entered the tablet computer market, were considered to be enhancing major strategic adjustment to compete with rivals such as Apple chips. Microsoft Chief Executive Steve Ballmer said at a press conference held in Hollywood, Surface is a "If you could get the tools your passions to surface".

In response to the strategic layout, Microsoft founder Bill Gates said Microsoft produces its own tablet computer that is a step in the right direction, the company will be able to do best in two worlds at the same time. "Microsoft can have a rich ecosystem of manufacturers, may also have some of the iconic device".

On June 27, Google's annual developer meeting opens in San Francisco issued a Tablet PC Nexus7 and new version of Android 4.1 mobile operating systems, these devices will start shipping in mid-July, priced at \$ 199, and is same as United States Amazon's Tablet Kindle Fire.

"Google, through collaboration with ASUS to complete Nexus7, this wonderful product is at affordable price for \$ 199 so that everyone can embrace digital entertainment life. "Google Senior Vice President of digital sector Andy Rubin said these words to the outside world.

In addition to launching Nexus7, Google will also work with ASUS to launch a tablet computer screen larger Nexus10 to challenge Apple's iPad. Professionals have noted that Apple iPad brought huge gains in recent years, enabled Microsoft, Google the only system manufacturers no longer willing to do behind the scenes of "pushing hands" and compete among the "front office", hoping to get to the Tablet market "pie". And Google join or will the Apple iPad faces real challenges.

The new pattern of the Tablet market will appear in the second half of this year, CITIC Securities Research Department Lin Zhenmin classified it as "three new": new system, WindowsRT and Android 4.1; new heavyweight competitors, Microsoft and Google's own brand, as well as Apple iPadmini; new price points below \$ 200 many competitive products will appear.

In the current global Tablet market is growing at high speed,

and in this lucrative market, Apple iPad outshines other Tablet manufacturers seem to match only, not with its rival. And for two IT giants Microsoft, Google, in the face of their hardware partners "is not to force", had himself washed up on the front line, to compete with Apple.

"Although personal computer vendors and handset manufacturers hope food market, into the Tablet market, but so far, except for Apple iPad success, other manufacturers ' achievements are quite limited. "United States advisory company Gartner analyst Carolina Milanesi recently pointed out.

United States advisory company Gartner forecasts, Microsoft this year will be new Windows8 platforms take the 4% of the Tablet market, tablet computers running Google Android market share rate of 32%, and Apple will take the 61% of the market share.

IDC expected Tablet sales will reach the global market this year 107.4 million, which is higher than expected. ABIResearch statistical market research company, Apple's iPad shipments will reach 11.8 million in the first quarter of this year, Google's Android camp Samsung Tablet shipped 1.1 million, is ranked second, but is far from Apple's iPad. Hot sales of the Apple iPad, Android tablets as a whole generally.

Full Analysis Google Nexus 7

Beijing time on July 12, according to foreign media reports, the Android operating system has been in the Tablet market is not very good, but now the situation may be improved. Next week, Google will launch a self designed Android Tablet--Nexus 7, priced at \$ 199, configured with 7-inch multi-touch screen. In the view of many people, Nexus 7 will be disrupter in the Tablet market.

In the tests a few weeks later, there is reason to believe that the Nexus 7 will become the best Android tablet ever. It can replace more expensive Apple iPad (price \$ 499, screen size larger), can also provide a more direct competitor--Amazon launched

Kindle Fire shocks (price also stood at \$ 199, 7-inch screen).

Insiders said that Nexus 7 than the same specification of Samsung's tablet is better performance and lower prices (Samsung Tablet is priced at US \$ 250).

Google's new Tablet PC does not have all the features of the iPad. For example, it is not configured with 3G wireless communication function, no rear camera nor iPad kind of dazzling high-resolution screen, the screen size is only half of the iPad. Nexus 7 memory size is only half of the iPad, users can play less content than Apple or Amazon's device only supports music, movies and television shows. Nexus 7 applications that are available on very few applications on the iPad it is learnt that have exceeded 200,000.

However, for smaller budgets of users, Google's Tablet is better than iPad that benefits a lot. For those who like a more lightweight and compact tablet users, Nexus 7 requires only one hand you can do. For those users that prefer Google's eco-system, its applications, services and content are much more obvious than Apple's familiar.

While Nexus 7 has many flaws, their experience is not bad actually. Nexus 7 even contains a characteristic of artificial intelligence, which is somewhat similar to Apple's Siri. This attribute can answer some of the issues raised by users via voice, like Siri. In addition, Nexus 7 also added something called "Google Now" attribute, you can display the current user a number of useful information, such as address, time, weather, traffic conditions, from the home to the company booking event reminders, and flight information.

There is an important characteristic for Nexus 7, which exceeds all previous Android tablet, that its battery par is cruising time with the iPad. It can be used continuously for more than 10 hours, 45 minutes more than the latest iPad.

There is no doubt that iPad has become almost synonymous with the Tablet, tablets from other vendors are not escape comparison with iPad's fate. Recent outgoing Apple introduced smaller, cheaper iPad, which would seem to indicate that Nexus 7 is difficult on the market. Besides, Apple iPhone5 is coming, more and more people are waiting for it, even some iphone fans have bought many kinds of iphone accessories in best case mall, such as cute iphone cases, stylish iphone cases, unique iphone cases and so on.

However, at least judging from the current situation, it seems that more direct opponents is Amazon's Kindle Fire for Nexus 7. With Fire similar to Nexus 7 was designed as a main content consumption (content-consumption) device. And Apple is different, Google creates Nexus 7 primarily for production efficiency and creative considerations, this is consistent with the design concept of the Amazon, hardware devices that allow users to use the cheaper to visit Google places in the sky music, videos, books and magazines.

In addition, Nexus 7 home screen will appear on the recently opened music, books, and other content, which you are currently viewing, and array appears as an icon on the screen, easy for users to see. Google's applications and content store has now changed its name to "Google Play", so Nexus 7 marketing slogan was "specially build for Google Play" and "game (Playground) is now open."

While Nexus 7 sizes and prices are very similar to Kindle Fire, but Google Tablet PC hardware and software quality is much better than a Fire. Fire shape looks awkward, and you did not configure the camera and microphone, their operating system is being seriously modified Android, than many real Android to be mediocre. The appearance of Nexus 7 looks more concise, attractive, configured with a smooth, fast, a new version of the Android operating system. In tests, the Nexus 7 battery navigation time is far more than Fire, almost 5 hours.

In addition, Nexus 7 and other devices, you can run the 60duowankuan application that one can see the application offered by Apple fair, than can Fire run 25,000 applications only to much more.

The past, a lot of Android application user experience is worse than Apple and Amazon, in large part because it is not supported by Google. However, several of the best Android applications are excellent many than Fire, most of these applications can be running on the Nexus 7, Nexus 70% is an ideal equipment in productivity and innovation.

Nexus 7 by ASUS for the Google generation workers, this is a special product of Google in order to "Nexus" to its name. Now on the market have Nexus phone, Nexus Nexus of paragraph 7 was the first tablet. Now Nexus 7 already in the Google online store (play.google.com) to make reservations, to be shipped next week. In addition, some entities retail stores will also sell the tablet computer next week, users do not need to cover the cost of wireless communications, because the Nexus 7 only supports Wi-Fi.

In addition, Google also unveiled the latest version of

Android--the "Jelly Bean".

This is not a revolutionary updates, but it optimization and improvement of the Android system, enables the user to operate more smoothly and rapidly, and joined the previously mentioned Google Now features. "Jelly bean" makes Android can finally and Apple iOS on an equal footing in two ways: hardware response capabilities, as well as having to frequently return to the main menu. "Jellybeans" Galaxy now supports the Samsung Nexus phone, other Android devices are supported slowly.

Can Kindle Fire 2 succeed like Kindle Fire

On July 13, according to eWeek Web site published an analysis of article said, Amazon's Kindle Fire 2 tablet computer is expected to be published soon, which will challenge iPad and Nook and other ereaders. What features are needed to obtain such equipment a success?

Tablet computers are significantly changing the way businesses operate in the area. A few years ago, no one would have thought that Google and Amazon will compete in the Tablet market. In fact, if five years ago you were asked whether Google and Amazon will compete in the area of hardware, most industry observers and analysts would laugh at this question.

However, we now see that the two companies are competing tablet computer market. With the release of Nexus 7 tablet, Google and Amazon are clutching each other's throat.

Recognizing this, Amazon is preparing to counter-offensive.

Amazon is developing a new Tablet replacing the Kindle Fire. Of course, Amazon has not confirmed the news. However, taking into account the current situation in the Tablet market, this seems to be an obvious decision. Amazon requires new Kindle Fire. This equipment you may want to configure all the features consumers seek. Otherwise, such products will be ignored.

Taking into account these things, while maintaining its core functionality as an eBook reader, Amazon takes Kindle Fire 2 what features are included to make it a consumer using a sort of tablet computer? Below is required by the success of Amazon Kindle Fire 2

10 features.

1. more larger display

Amazon Kindle Fire currently only configures a 7-inch display.

That is a good thing for some consumers. However, this tablet wants to attract mainstream users, it needs more larger screen. Amazon's Kindle Fire 2 at least should be configured with the iPad's 9.7-inch display is the display. Beside, Apple iPhone5 is coming, more and more iphone fans are looking forward it, even some people have bought

best

cases for iphone, such as cool cases for iphone, bling cases

for iphone,

leather

cases for iphone and so on.

2. mobile network

Although the current Amazon Kindle Fire through WiFi can connect to the network, with main rival par Nexus 7 and David Barno Nook tablet, but the new Amazon Kindle Fire should configure 3G feature.

After all, this is a differentiating factor. This will help the product provides more value than the major competitors.

3. more storage

At the lower end of the current Tablet market, Tablet PC configurations stored is far below demand. Although the store is expensive, and it increases the Tablet price, Amazon should strive for this product at least 32GB storage configuration. Nexus 7 16GB the maximum storage capacity is not enough. Consumers will soon find this problem.

4. improved software

Amazon Kindle Fire the built-in operating system is based on Android, which is by far one of the more unique implementation. However, for each new device is released, users expect significant improvement of not only hardware but also software improvements. In the next-generation Kindle Fire, if Amazon did not provide improved software, it will fail.

5. the new design

Kindle Fire designs meets all product levels last year. However, as Microsoft Surface tablets show a unique new design and Google Nexus 7 has a very attractive appearance, it is time for Amazon to launch more future-focused and attractive device.

6. more powerful components

After the new design, Amazon must not neglect the importance of the internal components of the device. From a quad-core processor to significantly improved graphics chips, Kindle Fire 2 needed to

reach the level of its competitors in power to stick it in Tablet areas.

7. multiple choice

It is one of the things that Google can't do and David Barno in the choice of its own this situation. Amazon can provide the above display larger sizes as well as direct competition with Nexus 7 small display tablet. Selection is very important.

8. smart advertising Amazon strategies

Amazon must use their Amazon Kindle Fire 2 continues to do one thing that is implementing its smart ad strategies. Amazon uses its Web site visibility extend its tablet computer to access its Web site to everyone. This contributed to the substantial growth in sales in the fourth quarter of last year. Next generation Amazon Kindle Fire must once again the implementation of the strategy.

9. focus on Apple

Apple is not Amazon's direct competitors, because they are two different types of consumer-oriented. However, this does not mean that Amazon cannot focus on what Apple is doing. Apple is creating trend in the Tablet market. All other manufacturers in accordance with the benchmark to judge, do not measure the Apple will become an error in the Amazon.

10. additional services

Amazon Kindle Fire is one of the most clever thing in it equipment contains many services. This time, Amazon should provide more services or try to improve their products. Amazon Web services, such as Prime Instant Video and cloud storage, distance will help the Amazon opened with rivals. Amazon should not forget this.

On July 13, according to foreign media reports, the analysts said, if Apple can put big Tablet market share it successfully copied into the smaller categories, may soon be under control of 90% Tablet market.

It is expected that IT industry giants Apple is about to launch a smaller iPad, its screen size is only 7 or 8 inches. The iPad will compete with Android tablet now at the end of this year. Piper Jaffray senior research analyst Gene Munster said the pending launch of the product at the end of this year, its sales in the December quarter of \$ 4 million to 6 million units, that Apple will steal Android Tablet sales total of 30%. He said: "basically, once launched the iPad Mini, Amazon should be prepared for the meeting a war. Because Kindle and small tablets are a place in the primary market-share, Kindle will definitely suffer.

In addition, Munster also recognized that Apple iPad Mini will crowd out its iPad market that is dangerous, says its rate of crowding out may 10%. He also said: "I think the reality is that there will definitely be crowding out, but its effect on Apple in the market as a whole is quite positive.â
